

**The Hong Kong Polytechnic University**  
**Subject Description Form**

<b>Subject Code</b>	AMA569							
<b>Subject Title</b>	Stochastic models for carbon pricing and trading							
<b>Credit Value</b>	3							
<b>Level</b>	5							
<b>Pre-requisite / Co-requisite/ Exclusion</b>	Nil							
<b>Objectives</b>	This subject introduces students fundamental theories and methods of data mining and stochastic models that are useful for analyzing environmental data and carbon trading.							
<b>Intended Learning Outcomes</b>  (Note 1)	<p>Upon completion of the subject, students will be able to:</p> <p>(a) understand the principle of data analytics and data mining;</p> <p>(b) apply various data analytics algorithms and techniques to analyze data related to carbon neutrality;</p> <p>(c) understand different stochastic models for carbon trading</p>							
<b>Subject Synopsis/ Indicative Syllabus</b>  (Note 2)	<p><b>Overview of statistics and applied probability:</b> Basic concepts in statistics and probability, point estimation (MME and MLE), hypothesis testing.</p> <p><b>Statistical data mining for environmental data:</b> Data analysis methods include principal component analysis, linear regression, basic time series models, fundamentals of spatial random processes, spatio-temporal models.</p> <p><b>Stochastic models for carbon pricing and trading:</b> Markov chain, binomial tree model, random walk, Brownian motion, Feynman-Kac formula, return and risk, Markowitz model, Black-Scholes model, carbon asset pricing, carbon option pricing, European option, American option.</p>							
<b>Teaching/Learning Methodology</b>  (Note 3)	This subject mainly deliveries through lectures and programming training. The teaching and learning approach is mainly problem-solving oriented. The approach aims at the development of data analytics techniques and how the techniques can be applied to problem solving. Students are encouraged to adopt a deep study approach by employing high level cognitive strategies, such as critical and evaluative thinking, relating, integrating and applying theories to practice.							
<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>  (Note 4)	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a	b	c			
	1. Continuous Assignments	25%	✓	✓	✓			
	2. Project	30%		✓	✓			
	3. Examination	45%	✓	✓	✓			
	Total	100 %						

	<p><b>Continuous Assignment:</b> includes participation in the computer laboratory sessions and turning on time the graded quizzes to check students' progress throughout the semester.</p> <p><b>Project:</b> will be assigned during the second half of the semester. Students will use their knowledge gained in the class/lab to tackle problems related to data analytics in semiconductor manufacturing.</p> <p><b>Examination:</b> assess the knowledge acquired by the students, as well as to determine the extent to which they have achieved the intended learning outcomes.</p>	
<b>Student Study Effort Expected</b>	Class contact:	
	▪ Lecture	26 Hrs.
	▪ Computer Laboratory and Tutorial	13 Hrs.
	Other student study efforts:	
	▪ Assignment/Projects	51 Hrs.
	▪ Reading and self-study	30 Hrs.
	The total student study effort	120 Hrs.
