

Subject Description Form

Subject Code	AMA1D08
Subject Title	The Mathematics behind Music
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	The subject aims to explore the connection between music and mathematics. We will present basic concepts in music theory and introduce the mathematical tools and theories to describe music in a simple and intuitive way. The students will gain a deeper understanding of both music and mathematics from the subject.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. explain basic music theory concepts including pitch, scale, temperament, rhythm, chord and timbre and how they are related to mathematics. b. know how different music instruments produce their sounds and how mathematics can be used in designing, tuning and playing them. c. understand the mathematical tools used to describe and analyze music and apply them to simple examples. d. recognize the different branches of mathematics introduced in the subject and the role they play in the study of music. e. conduct self-learning and work with team members in searching relevant literature and present the findings.
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Musical rhythms from African drums to dance music; basic number theory; generating rhythms using Euclidean algorithm and Bjorklund's algorithm; describing rhythms by graphs. 2. Pitch and pitch class; arithmetic and geometric sequences; logarithm functions; partitions and equivalent classes. 3. Scales and temperament; Pythagorean scale; just intonation and equal temperament; rational and irrational numbers; continued fractions and approximation of irrational numbers. 4. Overtones and timbre; periodic functions; representing sounds by sinusoids and their sums; consonance and dissonance. 5. Chords and their mathematical representations, transposition and inversion of chords; circle of fifths. 6. Variations of a musical theme; basic group theory; representing symmetry in music using groups; operation group on triads and Tonnetz.

<p>Teaching/Learning Methodology</p>	<p><u>Lectures:</u> Examples from various aspects of music will be presented in the lectures followed by introductions to the mathematical tools and theories to study and analyze them. There will be audio and video materials in each lecture and students will answer questions using online response systems. Students will be engaged in an active learning atmosphere in the lectures.</p> <p><u>Tutorials:</u> Students will work in groups on a set of problems and discussion questions related to the previous lecture guided by the tutor in tutorials. The problems will be similar to those in the test and exam. The discussion questions will encourage the students to think actively and share their knowledge and ideas.</p>																																																													
<p>Assessment Methods in Alignment with Intended Learning Outcomes</p>	<table border="1" data-bbox="524 618 1437 1160"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th></th> </tr> </thead> <tbody> <tr> <td>1. Participation</td> <td>20%</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> <td></td> </tr> <tr> <td>2. Test</td> <td>20%</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> <td></td> </tr> <tr> <td>3. Presentation</td> <td>20%</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>4. Exam</td> <td>40 %</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td></td> <td></td> </tr> <tr> <td>Total</td> <td>100 %</td> <td colspan="6"></td> </tr> </tbody> </table> <p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p><u>Participation (20%):</u> Students will answer questions in class during the lectures using online student response systems (e.g. uReply). The marks will be based on both participation (10%) and performance (10%) in answering the questions.</p> <p><u>Midterm Test (20%):</u> A 90-minute in class midterm test will contain multiple choice questions and short answer questions.</p> <p><u>Presentation (20%):</u> Students will be divided into groups of four to five and each group will give a presentation in the last two to three weeks of the semester. The lecturer will suggest a set of topics based on the course material. The students can also choose their own topics related to mathematics and music upon approval from the lecturer. The presentation should be 8-10 minutes long and marks will be given according to the content (10%), organization (5%) and performance (5%).</p> <p><u>Final Exam (40%):</u> The exam will also contain multiple choice questions and short answer questions. The questions will blend music theory with simple applications of mathematical tools introduced in class.</p>								Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						a	b	c	d	e		1. Student Study Effort Expected	Class contact:	
	▪ Lectures	26 Hrs.
	▪ Tutorials	13 Hrs.
	Other student study effort:	
	▪ Reading reference materials	30 Hrs.
	▪ Research and preparation for presentation	40 Hrs.
	Total student study effort	109 Hrs.
