Subject Description Form

| Subject Code | AMA2707 | | | | |
|--|---|--|--|--|--|
| Subject Title | Intermediate Calculus and Linear Algebra | | | | |
| Credit Value | 3 | | | | |
| Level | 2 | | | | |
| Pre-requisite | Calculus and Linear Algebra (AMA1007) or Basic Mathematics II – Calculus and Linear Algebra (AMA1120) or Calculus for Engineers (AMA1130) or Calculus (AMA1131) or Foundation Mathematics for Accounting and Finance (AMA1500) or Calculus (AMA1702) | | | | |
| Exclusion | Intermediate Calculus and Linear Algebra (AMA2007) Mathematics I (AMA2111) Mathematics II (AMA2112) Mathematics for Engineers (AMA2131/AMA2308) Engineering Mathematics (AMA2380) Applied Mathematics I (AMA2511) Applied Mathematics II (AMA2512) Mathematics for Scientists and Engineers (AMA2882) Engineering Mathematics (AMA290) | | | | |
| Objectives | This subject aims to introduce students to the basic concepts and applications of elementary calculus and matrices. Emphasis will be on the understanding of fundamental concepts and the use of mathematical techniques in handling practical problems in science and engineering. | | | | |
| Intended Learning Outcomes | Upon completion of the subject, students will be able to: (a) apply the differentiability of multivariable functions to compute derivatives using various rules of differentiation; apply differential calculus to calculate rates of change, locate local extrema; (b) develop the concept of multiple integral of a function of several variables over a plane or space domain and evaluate multiple integrals; (c) perform basic operations of matrix algebra and apply them to study system of linear equations; (d) discuss the basic concepts of vector space, linear transformations and inner product; (e) apply the techniques of linear algebra to problems in applied mathematics | | | | |
| Subject Synopsis/ Indicative Syllabus | <u>Calculus</u> : Differential Calculus for functions of several variables: Partial derivatives; chain rule; Taylor's Formula; relative extrema; Lagrange multipliers; linear and nonlinear constrained optimization. | | | | |

| | <i>Multiple Integrals:</i> Double and triple integrals; the change of variables formula. | | | | | | | | |
|--|--|----------------|--|---|---|---|-----------------------|--|--|
| | Linear algebra: Basic properties of matrices, linear systems, linear dependence; inner product, norm; orthogonality; Gram-Schmidt orthogonalization process; diagonalization of symmetric matrices; eigenvalues and eigenvectors. | | | | | | | | |
| Teaching/Learning Methodology | Basic concepts and elementary techniques of differential and integral calculus and linear algebra will be taught in lectures. These will be further enhanced in tutorials through practical problem solving. | | | | | | | | |
| Assessment Methods in Alignment with | Specific assessment methods/tasks | % weighting | Intended subject learning outcomes to be assessed (Please tick as appropriate) | | | | | | |
| Intended Learning Outcomes | | | a | b | с | d | e | | |
| Outcomes | 1. Homework and mid- term test | 40% | ~ | ~ | ~ | ~ | ✓ | | |
| | 2. Examination | 60% | ✓ | ✓ | ✓ | ✓ | ✓ | | |
| | Total | 100 % | | | | | | | |
| | The subject focuses on knowledge, skills and understanding of Intermediate Calculus and Linear Algebra , thus, Exam-based assessment is the most appropriate assessment method, including 60% examination. Continuous Assessment methods comprising individual assignments and tests (40%) are included so as to keep the students in progress. A written examination is held at the end of the semester. | | | | | | | | |
