Angel S.P. Chan Lau Endowed Professorship in Health and Longevity
劉陳小寶健康延年教授席

Professor Alex Molasiotis developed an online database of over 400 Chinese medicinal herbs through scoping literature review, with particular emphases on the recognition of herbs and their modes of action and side effects. He also developed a research proposal for a randomized trial to test the effectiveness of acupressure for the management of depression among elderly patients from Kwai Chung Hospital. The two-year trial has started with the first few patients being recruited. Dr Patrick Jahn from the University of Halle, Germany, was invited by Professor Molasiotis to develop a protocol for a post-doctoral fellowship to assess the effectiveness of Chinese medical herbs.

Recently, Professor Molasiotis published 11 publications in international medical high impact-factor journals, and he is working on two proposals focusing on herbal medicine. He supported the preparation of an application for funding regarding a project on the management of peripheral neuropathies in cancer patients using acupuncture, which received sponsorship of HK$1 million from the Health and Medical Research Fund.

Molasiotis教授建立了網上中草藥資料庫，儲存逾四百種中草藥資料，他撰寫研究計劃書，研究穴位按壓對管理抑鬱的成效。該研究期為兩年，以葵涌醫院老年患者為對象，Molasiotis教授邀請德國哈雷大學Patrick Jahn博士到訪，為評估中草藥成效研究制定程序。

Molasiotis教授的十一篇文章，刊登於國際醫療期刊，他正撰寫兩份中草藥研究建議書，他亦曾支持一項研究計劃申請校外資助，該研究名為「隨機試驗針灸管理癌症患者周邊神經病變的成效」，最終獲醫療衛生研究基金一百萬港元的資助。
