Implementation of Outcome Based Teaching and Learning in EE - Aligning teaching, learning and assessment with ILOs

Dr. H P Chan, Associate Professor
OBTL Coordinator, EE

Department of
ELECTRONIC ENGINEERING

香港城市大學
**City University
of Hong Kong**

Outlines

1. Overview of the OBTL framework in EE
2. Examples of Courses
   a. Engineering Analysis (EE3108)
      – E-Platform & Laboratory
   b. Electronics Product Design (EE3003)
      – Enhancing writing skill through LCC
3. Summary

Management Structure
for Implementing OBTL in EE
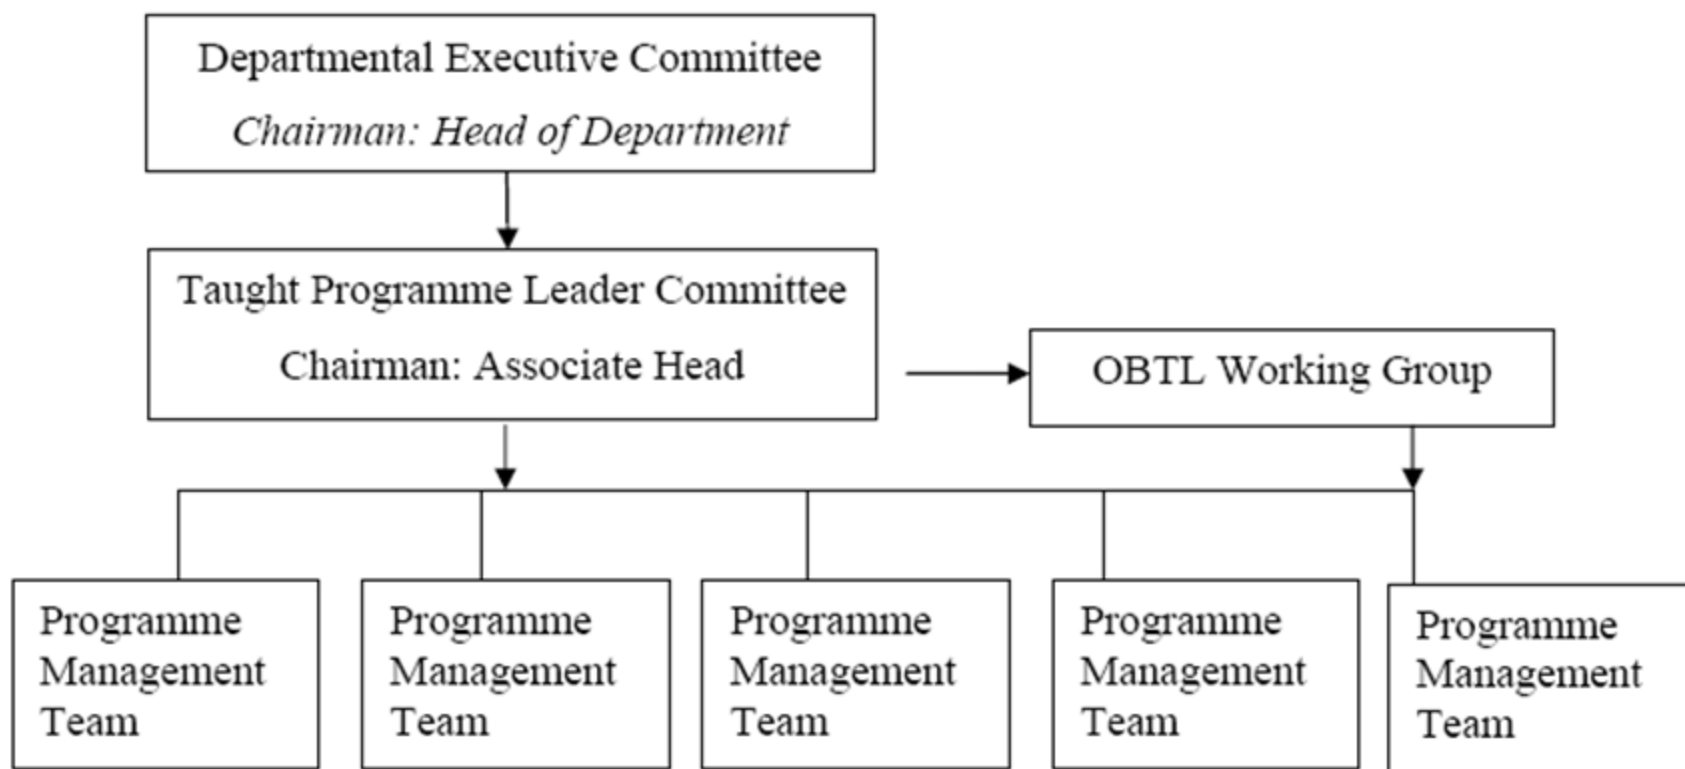

Quality Assurance System in PMT
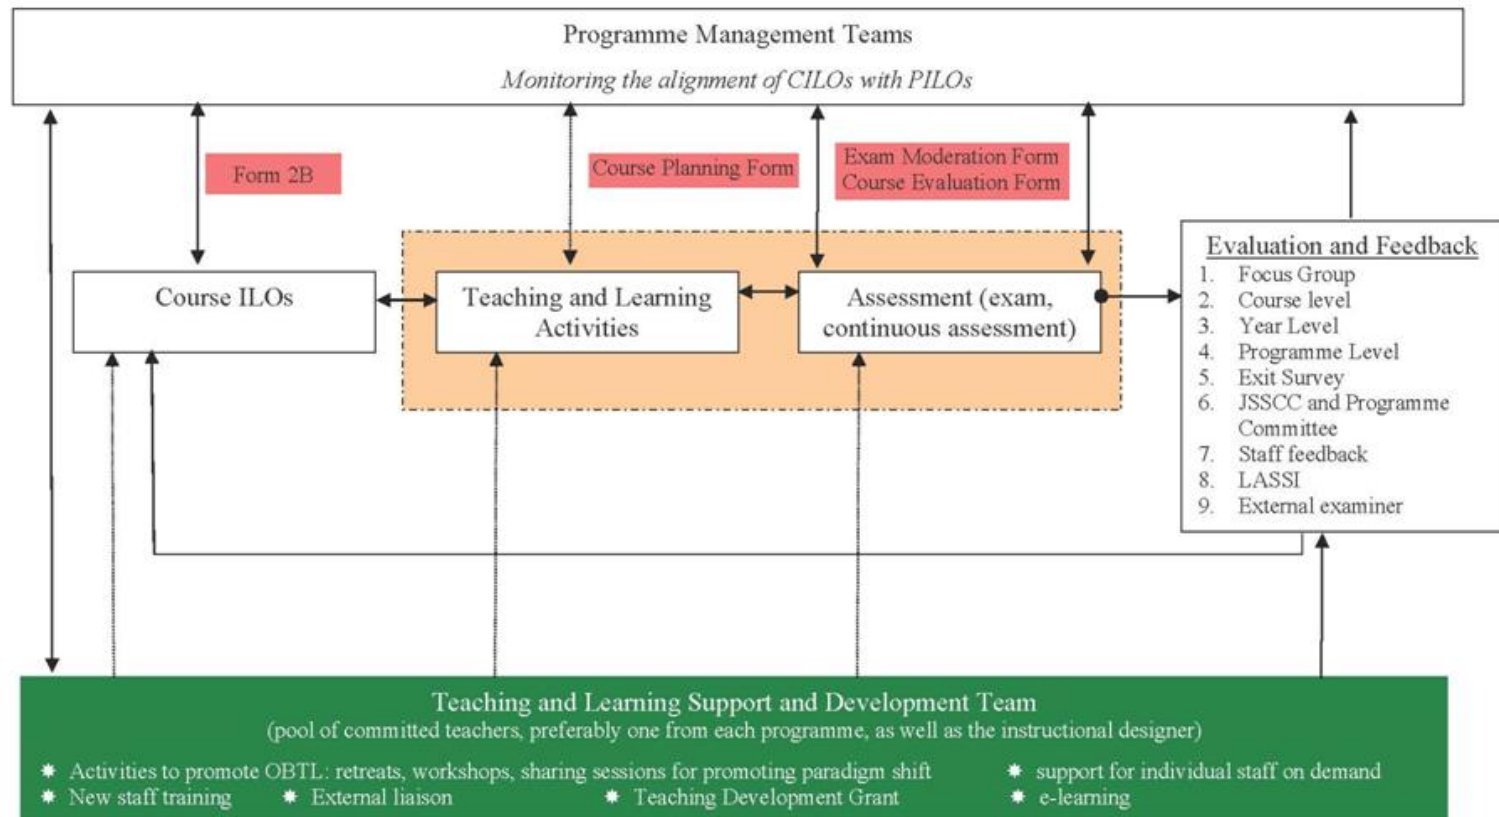

香港城市大學
City University of Hong Kong

Programmes Offered by EE

Undergraduate	Taught Postgraduate	Postgraduate by Research	Others

UNDERGRADUATE PROGRAMMES

- **Computer Engineering**
  - BEng (Hons) in Computer Engineering
   (Optional Business Intelligence Minor)

- **Electronic and Communication Engineering**
  - BEng (Hons) in Electronic and Communication Engineering
    (Optional Business Intelligence Minor)

- **Information Engineering**
  - BEng (Hons) in Information Engineering
    (Optional Business Intelligence or Law Minor)

Department of
ELECTRONIC ENGINEERING

香港城市大學
City University
of Hong Kong

Programme Intended Learning Outcome

1. An ability to apply knowledge of mathematics, science and engineering.
2. An ability to design and conduct experiments as well as to analyze and interpret data.
3. An ability to design systems, components, or processes that conform to a given specification and according to recognized professional practices.
4. An ability to function effectively and responsibly as a team member.
5. An ability to identify, formulate and solve engineering problems.
6. Awareness of professional and ethical responsibilities.
7. An ability to communicate effectively.
8. Knowledge in contemporary issues and an awareness of the impact of engineering solutions in a broad, global and societal context.
9. Recognition of the need for life-long learning.
10. An ability to use necessary engineering tools.

Department of
ELECTRONIC ENGINEERING

Programme Structure and Flowchart of
BEng(Hons) in Electronic and Communication Engineering / BEng(Hons) in Electronic and Communication Engineering (Business Intelligence Minor)
2009 / 2010 intake cohort

Semester / Year

Business Intelligence Minor

A/1
- MA2149 (3CUs) Mathematical Analysis
- EE2372 (1CU) Electronics Laboratory
- EE2000 (3CUs) Logic Circuit Design
- EE2301 (3CUs) Basic Electronic Circuit
- CS2363 (3CUs) Computer Programming

B/1
- MA3150 (3CUs) Advanced Mathematical Analysis
- EE2108 (3CUs) Engineering Analysis
- EE2003 (3CUs) Circuit Theory
- EE2106 (3CUs) Electronic Devices & Circuits
- EE2170 (1CU) Analogue Electronics Laboratory
- FB2200 (3CUs) Management Sciences I

A/2
- EE2104 (3CUs) Introduction to Electromagnetics
- EE3118 (3CUs) Linear Systems and Signal Analysis
- EE3008 (3CUs) Principles of Communications
- EE3110 (3CUs) Analogue Electronic Circuits
- EE3003 I (1CU) Electronic Product Design
- EE3120 (3CUs) Microprocessor & Assembly Lang. Programming
- MS3215 (3CUs) Linear Models

B/2
- EE3109 (3CUs) Applied Electromagnetics
- EE3114 (3CUs) Systems & Control
- EE3101 (3CUs) Communication Engineering
- Elective (Group C)
- EE3003 II (1CU) Electronic Product Design
- MS3217 (3CUs) SAS Programming

A/3
- Elective (Group A or B)
- Elective (Group A or B)
- Elective (Group A or B)
- (6CUs) EE4181 / FS4003 Project
- EE3014 (2CUs) Engineers In Society
- MS4215 (3CUs) Enterprise Data Warehousing & Web Applications

B/3
- Elective (Group A or B)
- Elective (Group A or B)
- MS4224 (3CUs) Enterprise Data Mining

Legend:
→ Pre-requisite
--→ Pre-cursor
↔ Co-requisite

Remarks:

1/ Apart from the above courses, students are required to take EE4091 Basic Training I and EE4092 Basic Training II in Year 1 and 2 summer respectively. Students should also fulfill 6 credits of University Language Requirements, 6 credits of Chinese Civilization and at least 3 CUs of General Education courses and 6 CUs of Out-of-Discipline (OOD) courses. For BEngECE(BIM), the GE/OOD can be fulfilled by the Minor's courses.

2/ Students opting for BEngECE(BIM) will take 4 electives instead of 5. They will also take EE3110 in Year 2 Sem B and Group C Elective in Year 3 Sem B.

3/ For detailed course descriptions, please refer to the departmental website: http://www.ee.cityu.edu.hk

Background Information

- BEngECE Programme
- Target First Year Students
- Large Class Size 100+
- A large variety of background
  - some good and some poor in programming skills
- Focus on the implementation of numerical algorithm in MATLAB programming environment.
  - Student are expected to apply the skills learned in this course in other subsequent courses

Department of
ELECTRONIC ENGINEERING

11

香港城市大學
City University

Course ILOs for Engineering Analysis

CILO 1: To <u>identify</u> different possible types of errors particular to numerical computation.

CILO 2: To <u>express</u> a range of fundamental numerical algorithms in form of flowchart, pseudo code and MATLAB programming language.

Higher Level in Understanding

CILO 3: To <u>implement</u> a given algorithms in MATLAB programming environment.

CILO 4: To <u>apply</u> numerical analysis algorithms in solving a given engineering problem.

Department of
ELECTRONIC ENGINEERING

Adopting new TLAs and ATs to meet the CILOs

1. Meet the needs of OBTL
   – limitations in conventional TLAs and ATs
      ➤ programming assignments, and written quizzes & examination

2. Set up a Blackboard e-platform to
   – motivate student higher level learning
   – conduct assessments, and monitor student learning over a time period
   – offer computer assisted assessments/laboratory activities

3. Provide students with more opportunities to present their works

Department of
ELECTRONIC ENGINEERING

香港城市大學
City University
of Hong Kong

Limitations of conventional TLAs and ATs

Case 1

A part-time student who have scored a high grade in EE3108…

"**To score a high grade** in EE3108 is not very difficult as long as you **know the trick to attempt questions** in exam and test. In fact, you do not need to revise so much materials."

Case 2

A full-time student who have **scored a high grade in EE3108**.

During the handling a FYP problem, the student never thought of using MATLAB to solve a simple root searching problem. When I asked the student to use MATLAB to solve it, the **student do not know how to write a root searching program**.

Case 3

A full-time student who had taken EE3108.

The student told me that it is **very easy to understand the concepts** of the various algorithms. However, she often **felt very frustrating in implementing the algorithms with program**. **She preferred me to just access the concepts** like previous forms of assessments.

Department of

Statistical Feedback (TFQ)

Part A:

In general, I have found that this teacher has:	5	4	3	2	1	Mean	Stdev
	Str. Agree -----> Str. Disagree						
1. communicated course aims clearly.	18	23	5	1	2	4.1	0.96
2. presented course content clearly.	17	26	4	0	2	4.14	0.89
3. been well prepared for classes.	22	23	3	0	1	4.33	0.77
4. organised class time effectively.	21	17	8	2	1	4.12	0.97
5. stimulated student interest in the subject.	20	19	5	2	3	4.04	1.12
6. made an effort to enhance student understanding of the subject.	22	20	5	0	2	4.22	0.94
7. been helpful and responsive to student needs.	25	18	4	0	2	4.31	0.94
8. explained expectations on coursework and assessment clearly.	24	15	8	0	2	4.2	1
9. given realistic, relevant coursework and assessment activities.	17	22	5	1	2	4.09	0.97
10. provided useful and timely feedback on student learning.	20	17	7	1	2	4.11	1.03

Department of
ELECTRONIC ENGINEERING

Written Feedbacks in TFQ

- The blackboard is a <u>good place for</u> student and teacher <u>communication and learning</u>.

- The <u>discussion board</u> is useful medium for ask question and <u>find the answer</u>.

- I most like the open Book test, it <u>focus on</u> the student <u>understanding</u> and <u>not to memorize</u> the formula.

香港城市大學
City University
of Hong Kong

Written Feedback in TFQ

- Project A&B can enhance our study motivation and problem solving skill.

- During studying this subject, I find that the assignments (projects) are very helpful to us. These two assignments are very related to our study and also give us a very good chance to practice our test and examination.

- Too much workload (extreme)

Student #1 commenting the teaching mode of EE3108

- It is very good to learn MATLAB during Week 1 tutorial (laboratory) in CSC. This allow students (her) to have <u>a first hand experience</u> to handle the software. This help them to <u>relieve the anxiety</u> in programming.

- The provision of <u>on-line resource to self-study MATLAB</u> is important and helpful. Since this enable students <u>to learn</u> the MATLAB <u>at their own pace</u>.

- Notes with illustration and programming examples are very helpful in implementing the algorithms <u>without the necessary memorizing each program</u>.

香港城市大學
City University
of Hong Kong

Student #2 commenting the teaching mode of EE3108

- The provision of <u>Self-evaluation exercise</u> (with instant feedback) after each lecture enables the students <u>to identify any mis-concepts immediately</u>.

- <u>Discussion Board</u> is very effective <u>to post questions and collect comments</u>. This will encourage students <u>to clear up any questions as soon as possible</u>.

- <u>Short-quiz</u> at the beginning of each tutorial class (laboratory) <u>forced students</u> to revise the lecture notes after each lecture. The <u>immediate feedback</u> on short-quiz results <u>motivate them to learn</u>.

Department of
ELECTRONIC ENGINEERING

香港城市大學
City University of Hong Kong

# Student #3 commenting the teaching mode of EE3108

- Q&A and practicing sessions (laboratory) allow students to have instant feedbacks on programming skill.

- Projects enable students to have experience to handle real problems. In particular, group project enable students to have peer learning environment.

- In general, if anyone can preview the notes before lecture, pay attention during lecture and, revise & do the self-evaluation exercises after each lecture to clarify any mis-concepts, the student think this course is not difficult to study.

Department of
ELECTRONIC ENGINEERING

Reflections

- Blackboard, if probably used, is a very good platform in enhancing students learning, monitoring student learning activities..

- To force students into an active learning mode is important.

- Workload is subjective, it depends on student's learning attitude.

- From the feedback received, most students feel they benefited from the current implementation of OBTL for EE3108.

香港城市大學
City University
of Hong Kong

Background Information

- EE 3003 is a laboratory-based course, lasting two semesters targeting Year 2 students.

- Students are working in groups. Each group has 3 to 4 students.

- Each group has to build a circuit and will then be asked to design a test jig for testing the circuit.

- In semester B, students will be asked to design a circuit or system that will integrate with three key components – linear / digital circuit design, microprocessor programming and interfacing.

Department of
ELECTRONIC ENGINEERING

Course ILOs for Electronic Product Design

CILO 1: To identify and recognize the essential design and production procedures of electronic products.

CILO 2: To apply fundamental analysis methods and theorems to the solution of the case study.

CILO 3: To design and implement a prototype for meeting the case study requirements.

CILO 4: To acquire hands-on experience and problem-solving skills in electronic product design.

CILO 5: To acquire experience in presenting the design work.

CILO 6: To form the foundation for the Electronic Product Manufacturing Project, the penultimate part of the industrial training programme run in the summer semester.

Department of
ELECTRONIC ENGINEERING

Adopting new TLAs and ATs to meet the CILOs

- Meet the needs of OBTL

- Set up a platform for the laboratory supervisors to conduct group and individual assessments, and monitor student learning over a time period

- Provide students with more opportunities to write and present their works

- Introduce Language Company Course (LCC) to assist student in writing skills. (PLIO 7)

Department of
ELECTRONIC ENGINEERING

TLAs in EE3003

Each student has

- One laboratory kit
    - Laboratory manual
    - Laboratory schedule
- One Logbook
    - Attendance record
    - Development plan
    - Weekly development progress
    - Group and individual assignments

TLAs in EE3003
Weekly development report

- Every week, students have to write a one-page summary to briefly report the development progress.

- The laboratory supervisor can keep tracking the progress of each student and giving necessary feedback.

City University
of Hong Kong
香港城市大學

Sample [assessment table]

Item	Week	Activity	Weighting	Level of achievement (0 – 3)
B1	2	Development plan	3.0	
B2	2	Development progress in Week 1	1.0

Language Companion Course (LCC)

- Form of support:
  - to provide subject teachers and language specialists with a platform for helping students improve their academic writing ability in English.

  - The main rationale behind the LCC is that language learning takes place more effectively within the context of the courses in students' chosen subject disciplines.

Department of
ELECTRONIC ENGINEERING

Implementation of LCC in EE3003

- Students have to submit the two five-page reports to EDO two weeks before the due date.

- After receiving the first draft of the reports, the language tutors will give students some comments on English and will ask them to submit the report again.

- The language tutors will mark the second submission and the laboratory supervisors will receive the final version.

- After finishing the first report, a sharing session will be organized by the EDO. The tutor will share with the students the common mistakes found.

- The marks given by the language tutors will contribute 10% of the overall mark for the reports.

Reflections

The new TLAs and TAs can provide

- a platform for the laboratory supervisors to closely monitor the learning progress of the students; and

- means to assess the performance of individual student and success of the student groups.

- students with more opportunities to write and improve their writing skills with the support of LCC

Summary

- We have introduced the OBTL framework in EE which assists in aligning teaching, learning and assessment with ILOs.

- This framework aims to give a good balance between the Quality Monitoring at Programme Level and the liberty of individual staffs to enhance students' learning.

- Two courses are selected to demonstrate how TLAs and ATs are aligned at CILOs and PILOs level. And the corresponding learning outcomes have been discussed briefly.
