

Subject Description Form

Subject Code	AAE4107
Subject Title	Aircraft Gas Turbine Engine Systems
Credit Value	3
Level	4
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: AAE3003 Aircraft Propulsion Systems and AAE2102/IC2133 Aircraft Manufacturing and Maintenance Fundamentals
Objectives	To provide students with knowledge of aircraft gas turbine engine systems and application in engine monitoring and maintenance
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Acquire good understanding of aircraft turbine engine design and construction. b. Demonstrate good understanding of compressor stall/surge and its prevention. c. Apply their knowledge and skills to explain the limitations of aircraft gas turbine engines under normal and abnormal operational conditions.
Subject Synopsis/ Indicative Syllabus	<p>Basic Aircraft Turbine Engine Design and Construction</p> <p>Constructional arrangement and operation of turbojet, turbofan, turboshaft, turboprop.</p> <p>Compressor stall/surge</p> <p>Causes and effects of compressor stall and surge and its prevention.</p> <p>Bearings and Seal</p> <p>Constructional features and principles of operation.</p> <p>Lubricants and Fuel</p> <p>Properties and specifications; Fuel additives; Safety precautions.</p> <p>Lubrication Systems</p> <p>System operation/lay-out and components.</p> <p>Fuel Systems</p> <p>Operation of engine control and fuel metering systems including electronic engine control (FADEC); systems lay-out and components.</p>

Air Systems

Operation of engine air distribution and anti-ice control systems, including internal cooling, sealing and external air services.

Starting and Ignition Systems

Operation of engine start systems and components; ignition systems and components; maintenance safety requirements

Engine Indication Systems

Exhaust gas temperature / interstage turbine temperature; engine thrust indication: engine pressure ratio, engine turbine discharge pressure or jet pipe pressure systems; oil pressure and temperature; fuel pressure and flow; engine speed; vibration measurement and indication; torque; power.

Power Augmentation Systems

Operation and applications; water injection, water methanol; afterburner systems.

Turbo-prop Engines

Gas coupled/free turbine and gear coupled turbines; reduction gears; integrated engine and propeller controls; overspeed safety devices.

Turbo-shaft engines

Arrangements, drive systems, reduction gearing, couplings, control systems.

Auxiliary power units (APUs)

Purpose, operation, protective systems.

Powerplant Installation

Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.

Engine Monitoring and Ground Operation

Procedures for starting and ground run-up; interpretation of engine power output and parameters; trend (including oil analysis, vibration and boroscope) monitoring; inspection of engine and components to criteria, tolerances and data specified by engine manufacturer; compressor washing/cleaning; foreign object damage.

Engine Storage and Preservation

Preservation and depreservation for the engine and accessories / systems.

Teaching/Learning Methodology	<p>Lectures are used to deliver the fundamental knowledge in relation to aircraft gas turbine engines (outcomes a to c).</p> <p>Tutorials are used to illustrate the applications of fundamental knowledge to practical situations (outcomes a to c).</p>
