

## Subject Description Form

<b>Subject Code</b>	AAE4903
<b>Subject Title</b>	Human Factors in Aviation
<b>Credit Value</b>	3
<b>Level</b>	4
<b>Pre-requisite/ Co-requisite/ Exclusion</b>	Nil
<b>Objectives</b>	To provide students with fundamental human factors concepts and develop students' understanding of the applied multi-disciplinary approach mostly concerned on airline transport pilot perspective.
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a. Explain the basic concepts of human factors HF in the aviation industry;</li> <li>b. Explain the application of ergonomics in flight deck design; and</li> <li>c. Identify and explain the human errors in airport operations, air traffic control, and pilot operation.</li> </ol>
<b>Subject Synopsis/ Indicative Syllabus</b>	<p><b>Basic Concepts:</b> Basic Aviation Physiology: Basics of flight physiology, Vision, Hearing, Equilibrium, Integration of sensory inputs. Health Maintenance: Body rhythm and sleep, Problem areas for pilots, Incapacitation in flight;</p> <p><b>Research methods:</b> Statistical analysis, Experiment design, Expert interview, Simulation.</p> <p><b>Cognitive Ergonomics</b> - Human information processing, Attention and vigilance, Perception, Memory, Response selection, Human error and reliability, Mental models and situation awareness, Theory and model of human reliability, Error management, Safety awareness, Coordination (multi-crew concepts), Cooperation, Communication, Cockpit management: Personality, attitude and behavior, Display, Fatigue and stress management, Advanced cockpit automation.</p> <p><b>Physical Ergonomics:</b> Anthropometry, Posture, Design strategies, Workstation design.</p>

<b>Teaching/Learning Methodology</b>	<p>Lectures are used to deliver the fundamental knowledge in relation to various aspects of aviation systems (outcomes a to c).</p> <p>Tutorials are used to illustrate the application of fundamental knowledge to practical situations (outcomes a to c).</p> <p>Group projects are used to help students to deepen their knowledge on a specific topic through search of information, analysis of data and report writing (outcomes a to c).</p> <table border="1" data-bbox="480 524 1410 893"> <thead> <tr> <th rowspan="2">Teaching/Learning Methodology</th> <th colspan="3">Intended subject learning outcomes to be covered</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> </tr> </thead> <tbody> <tr> <td>1. Case study</td> <td>30%</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> <tr> <td>Total</td> <td>100%</td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>Overall Assessment:</p> <p>1.0 × Continuous Assessment</p> <p>The continuous assessment is adopted to assess students on the overall understanding and the ability of applying the concepts. The continuous assessment is aimed at enhancing the students' comprehension and assimilation of various topics of the syllabus. In particular, group project is used to assess the students' capacities of self-learning and problem-solving and effective communication skill in English so as to fulfill the requirements of working in the aviation industry.</p>				Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed			a	b	c	1.
