DeepHAM: A Global Solution Method for Heterogeneous Agent Models with Aggregate Shocks

By

Dr. Jiequn Han Center for Computational Mathematics Flatiron Institute

Abstract

We propose an efficient, reliable, and interpretable global solution method, the Deep learning-based algorithm for Heterogeneous Agent Models (DeepHAM), for solving high dimensional heterogeneous agent models with aggregate shocks. The state distribution is approximately represented by a set of optimal generalized moments. Deep neural networks are used to approximate the value and policy functions, and the objective is optimized over directly simulated paths. In addition to being an accurate global solver, this method has three additional features. First, it is computationally efficient in solving complex heterogeneous agent models, and it does not suffer from the curse of dimensionality. Second, it provides a general and interpretable representation of the distribution over individual states, which is crucial in addressing the classical question of whether and how heterogeneity matters in macroeconomics. Third, it solves the constrained efficiency problem as easily as it solves the competitive equilibrium, which opens up new possibilities for studying optimal monetary and fiscal policies in heterogeneous agent models with aggregate shocks.

Biography

Jiequn Han is a Research Scientist in the Center for Computational Mathematics, Flatiron Institute, Simons Foundation. His research draws inspiration from various disciplines of science and is devoted to solving highdimensional problems arising from scientific computing. His current research interests mainly focus on machine learning based methods for partial differential equations, multiscale modeling, and macroeconomics. He holds a Ph.D. in Applied Mathematics from Princeton University, a B.S. in Computational Mathematics and a B.A. in Economics from Peking University.

Date: 5 September 2023 (Tuesday) Time: 16:00-17:00 (Hong Kong Standard Time GMT +8) Venue: HJ302 Speaker: Dr. Jiequn Han, Center for Computational Mathematics, Flatiron Institute Host: Prof. Min Dai, The Hong Kong Polytechnic University
