

## Subject Description Form

<b>Subject Code</b>	AMA546
<b>Subject Title</b>	Statistical Data Mining
<b>Credit Value</b>	3
<b>Level</b>	5
<b>Pre-requisite/ Co-requisite/ Exclusion</b>	<b>Pre-requisite:</b> AMA528 Probability and Stochastic Models; OR AMA563 Principles of Data Science
<b>Objectives</b>	To provide a comprehensive introduction to data mining. To present fundamental concepts and algorithms for each topic, to provide the students with the necessary background for the application of data mining to real problems, and to provide a starting point for students who are interested in pursuing research in data mining or related fields.
<b>Intended Learning Outcomes</b>	Upon completion of the subject, students will be able to: (a) Understand the principle of data mining; (b) Apply data mining techniques; (c) Report and interpret results in scientific manner; (d) Apply statistical package in data mining.
<b>Subject Synopsis/ Indicative Syllabus</b>	<p><u>Preliminaries:</u> Vectors and matrices; eigenvalues and eigenvectors; singular value decomposition; expectation and variance; point estimation; data types, data quality.</p> <p><u>Regression and Classification:</u> Linear regression, least squares methods; normal distributions, error analysis for least squares, the Gauss-Markov theorem; model overfitting; subset selection, shrinkage methods, ridge regression, the LASSO; dimension reduction, principal component analysis; kernel methods, kernel ridge regression; nearest neighbor methods; expectation-maximization; logistic regression; decision trees; naive Bayes classifiers; random forests; support vector machines; artificial neural networks; evaluating the performance of classifiers; receiver operating characteristic curves, AUC scores</p> <p><u>Clustering and Association Analysis:</u> Clustering analysis; hierarchical clustering; prototype-based clustering, density-based clustering, graph-based clustering; k-means clustering; spectral clustering; Association analysis</p> <p><u>Data Mining in Practice:</u> Data processing and measurements; introduction to selected software packages for data mining; data visualization; implementation of selected algorithms</p>

<b>Teaching/Learning Methodology</b>	The subject will be delivered mainly through lectures and tutorials. The teaching and learning approach is mainly problem-solving oriented. The approach aims at the development of data mining techniques and how the techniques can be applied to problem solving. Students are encouraged to adopt a deep study approach by employing high level cognitive strategies, such as critical and evaluative thinking, relating, integrating and applying theories to practice.																																					
<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	<table border="1" data-bbox="491 465 1378 943"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="4">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> </tr> </thead> <tbody> <tr> <td>1.
