

THE HONG KONG POLYTECHNIC UNIVERSITY

DEPARTMENT OF APPLIED MATHEMATICS

PROGRAMME DOCUMENT FOR RESEARCH DEGREES

Master of Philosophy

Doctor of Philosophy

2022

General Information

Institution	:	The Hong Kong Polytechnic University
Faculty	:	Faculty of Science
Department	:	Department of Applied Mathematics
Head	:	Professor Defeng SUN
Programme	:	Research Postgraduate Programme in Applied Mathematics
Mode of Attendance	:	Full time and Part time
Duration (Normal study period)	:	M.Phil 24 months for full-time, 48 months for part-time. 3- year PhD 36 months for full-time, 72 months for part-time. 4- year PhD 48 months for full-time, 96 months for part-time. (for admission with Bachelor Degree or Master Degree without any research components)
Implementation Date	:	September 2014
Programme Leader	:	Prof. Zhian WANG

The document is applicable to students admitted to the Research postgraduate programme in Applied Mathematics from academic year 2022/2023 onwards.

This Programme Document is subject to review and changes which AMA can decide to make from time to time. Students will be informed of the changes as and when appropriate.

This Document should be read together with the “Regulations and Administrative Procedures for the Degrees of MPhil and PhD” and the “Research Student Handbook”.

1 Full Programme Titles

Mater of Philosophy (MPhil)

Doctor of Philosophy (PhD)

2 Host Department(s)

Department of Applied Mathematics

應用數學系

3 Awards

1. M.Phil.

2. PhD

4 Medium of Instruction

All subjects are taught in English, unless otherwise specified.

5 Normal Duration and Mode of Attendance

M.Phil

24 months for full-time, 48 months for part-time.

3- year PhD

36 months for full-time, 72 months for part-time.

4- year PhD

(for admission with Bachelor Degree or Master Degree without any research components)

48 months for full-time, 96 months for part-time.

6 Mode of Attendance

● Full-time

● Part-time

7 Programme Management

Programme Leader

The Programme Leader will provide the academic and organizational leadership for the programme. The Programme Leader should expect the full support and cooperation of the Head of Department and Heads of other contributing Departments but should recognise that a Head will have to balance a range of departmental demands and priorities in allocating

staff and resources to the programme. In particular, a Programme Leader's responsibilities are:

- (i) to ensure the effective conduct and organization of the programme within agreed policies and regulations;
- (ii) to negotiate with the Head(s) of Department(s) about the allocation of appropriate staff for supervision and other duties required by the programme;
- (iii) to develop good working relationships with the Heads and relevant senior staff of Departments involved in the programme and with staff for supervision on the programme;
- (iv) to keep in close touch with the academic welfare and progress of students on the programme, and to be closely aware of students' views about the programme;
- (v) to report to the Heads of Departments concerned on the on-going requirements of staff and resources for the programme, as part of the preparation of departmental estimates;
- (vi) to lead the development of the programme and the implementation of the Programme Learning Outcomes Assessment Plan;
- (vii) to coordinate the inputs to and the debate of the Departmental Programme Committee leading to the annual programme review reports (including the programme learning outcomes assessment results) which form part of the Annual QA Report and Business Plan, and other periodic programme reviews; and
- (viii) to take executive action as agreed by the Departmental Programme Committee.

8 Entrance Requirements

Applicants seeking admission to a research postgraduate programme should satisfy the following minimum entrance requirements:

MPhil: a Bachelor's degree in a relevant area with Second Class Honours or above (or equivalent qualification) conferred by a recognised university.

3-year full-time / 6-year part-time PhD: an MPhil or equivalent (a research postgraduate degree with a dissertation as an award requirement) conferred by a recognised university.

4-year full-time / 8-year part-time PhD: a Master's degree; or a Bachelor's degree with First Class Honours (or equivalent qualification), conferred by a recognised university.

Applicants from a university where the language of teaching /instruction /examination is NOT entirely in English should satisfy the minimum English proficiency requirements specified by both the University and individual Faculties.

Applicants who have not obtained a degree from a recognised university in which the language of instruction is English are normally required to obtain:

1. an overall score of at least 6.5 in the International English Language Testing System (IELTS); or
2. a Test of English as a Foreign Language (TOEFL) score of 80 or above for the Internet-based test or 550 or above for the paper-based test.

All English language test scores are considered valid for two years after the date of the test.

9 Programme Learning Outcomes

Programme Aims

The aim of the programme is to enable the students to acquire competence in research methods and scholarship in Applied Mathematics, and to display sustained independent effort and independent original thought. This programme prepares students to become academics, researchers or industrial R & D professionals upon graduation.

Programme Outcomes

The research degree programmes are designed in such a way to enable the student to:

- develop and demonstrate research skills and knowledge in applied mathematics; critically analyze new and complex information from real problems, and effectively utilize research methodologies in applied mathematics; and
- recognize the importance of research ethics; and
- provide novel solutions to research problems and effectively interpret new research results; and
- learn up-to-date research advances and developments in applied mathematics; and
- present results with good scientific writing and presentation skills (for PhD programme)

10 The Curriculum

Course/ Credit Requirement

Students are mainly conducting research study under the supervision of their main supervisor's guidance. Different categories of students need to attain different credit requirements. The credit requirements should cover attending seminars and Practicum as follows:

2-year MPhil: 9 credits

*(1 credit from HTI6081 + 2 credits from attending seminars
(AMA67711+AMA67712) +AMA613+ 3 credits from other subjects)*

3-year PhD: 15 credits

*(1 credit from HTI6081 + 3 credits from attending seminars
(AMA67711+AMA67712+AMA67713) +
2 credits from Practicum (AMA67721+AMA67722) +
AMA613+ 6 credits from other subjects)*

4-year PhD: 22 credits

*(1 credit from HTI6081 + 4 credits from attending seminars
(AMA67711+AMA67712+AMA67713+AMA67714) +
2 credits from Practicum (AMA67721+AMA67722) + AMA613+12 credits
from other subjects)*

Other subjects can be chosen from the research postgraduate subject list offered by AMA, other PolyU departments or other local Universities with a similar level.
List of the subjects offered by the department are varied from year to year.

Attendance in research seminars/ workshops/ conferences

Full-time students are required to attend at least 10 research seminars per year (of which at least 8 research seminars must be within AMA), in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars every year.

Part-time students are required to attend at least 10 research seminars per two years (of which at least 8 research seminars must be within AMA), in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars once every two years.

Students are recommended to complete one credit per year (for full-time students) or per two years (for part-time students) to fulfil the above-mentioned requirement, with an overall assessment grade of Pass and Fail. However, as deemed appropriate by the Chief Supervisor, they are allowed to complete at most two credits per year (for full-time students) or per two years (for part-time students) to fulfil the research seminar credit requirement.

Chief Supervisors are required to assess the report (with a pass or failure grade). Students who failed to submit a report to the satisfaction of their Chief Supervisor are required to make a re-submission until a pass grade is obtained. The Chief Supervisor has to pass the record of the seminars attended by their students and the report with a pass grade to the Research Office for custody at the end of each academic year.

Practicum

As part of the programme requirement, PhD students, irrespective of funding source and mode of study, must complete two training credits before thesis submission. To earn one credit, students will be required to engage in teaching activities/professional service assigned by the HoD or his/her delegate for 6 hours/week in any 13-week semester.

Students are allowed to complete these two credits any time before thesis submission. They can choose to complete these two credits in two different semesters or within the same semester, subject to the approval of the Chief Supervisor. Stipend recipients are not allowed to fulfill part of their departmental training requirement through the completion of these compulsory training credits.

The HoD or his/her delegate is required to:

- a. ensure that the activities are structured and can be assessed properly;
- b. submit, at the end of the training session, an assessment report on the performance of the relevant student(s), with details of activities undertaken and an overall assessment grade of Pass or Fail.

In addition to the 2 credits requirement, the department would also assign students to mark assignments and invigilate mid-term tests and examinations in every semester. Students are also expected to help in conferences organized by the department.

Guided Study Subjects

The maximum number of credits to be taken is 3.

Language Proficiency Requirement after Admission

All research students are required to take the Research Language Skills Assessment (RLSA) in their first semester of study at PolyU to be arranged by English Language Centre (ELC). Based on their performance of the RLSA, students will need to take relevant subjects according to the following arrangement:

RLSA Performance¹	<i>English enhancement subjects</i>
Band 1 in both Writing, and Speaking tasks	exempted
Band 2 or above in both Writing, and Speaking tasks	ENGL6016: <i>Advanced Academic English for Research Students: Publishing and Presenting</i>
Band 3 or below in either Writing, or Speaking tasks	ELC6011 and ELC6012 ELC6011: <i>Presentation Skills for Research Students</i> ELC6012: <i>Thesis Writing for Research Students</i>

Note 1: Band 1 is the highest grade and Band 5 the lowest.

Before thesis submission, students are required to take and pass the English enhancement subjects.

National Education Requirement

All research students admitted from the 2022/23 cohort onwards are required to complete the National Education requirement before thesis submission as a graduation requirement. Student are required to take a 3-hour e-learning module on “Understanding China and the Hong Kong Special Administrative Region, P.R.C.” in English. Details on the requirement are specified at: <https://www.polyu.edu.hk/ous/nationaleducation/understanding-china-and-hongkong/>.

Thesis requirements

For students admitted in or before the 2020/21 cohort

Option 1: A thesis must be submitted to the satisfaction of the supervisor(s) for reviews by external examiners. The submitted thesis must contain at least one accepted/published paper in an SCI journal for PhD students.

Option 2: A PhD thesis must be submitted to the satisfaction of the supervisor(s) for reviews by external examiners. Prior to submission for reviews by external examiners, a PhD thesis which does not contain any accepted/published paper in a good journal must pass a review conducted by AMA PhD Thesis Assessment Committee. The AMA PhD Thesis Assessment Committee should consist of the Programme Leader (Panel Chair) and three independent members from different research groups.

For students admitted from the 2021/22 cohort onwards

A PhD thesis must be submitted to the satisfaction of the supervisor(s) for reviews by external examiners. Prior to submission for reviews by external examiners, a PhD thesis

which does not contain any accepted/published paper in a good journal must pass a review conducted by AMA PhD Thesis Assessment Committee. The AMA PhD Thesis Assessment Committee should consist of the Programme Leader (Panel Chair) and three independent members from different research groups.

Graduation Requirements

A student would be eligible for award if he/she satisfies all the conditions listed below:

- (i) Accumulation of the requisite number of credits for the particular award, as defined in the definitive programme document; and
- (ii) Satisfying all other requirements as defined in the definitive programme document and as specified by the University; and
- (iii) All MPhil and PhD students need to complete their coursework with a qualifying GPA of 2.7 or above before submission of their thesis for examination.
- (iv) Take and pass an oral defense of his/her thesis
- (v) All other general University requirements relating to Graduation Requirements.

11 Subjects Support to Programme Outcomes

Grading

Assessment grades shall be awarded on a criterion-referenced basis. A student's overall performance in a subject shall be graded as follows with effect from the 2020/21 academic year for all students,:

<i>Subject grade</i>	<i>Short description</i>
A+	Excellent
A	
A-	
B+	Good
B	
B-	
C+	Satisfactory
C	
C-	
D+	Pass
D	
F	Failure

'F' is a subject failure grade, whilst all others ('D' to 'A+') are subject passing grades. No credit will be earned if a subject is failed.

A numeral grade point is assigned to each subject grade, as follows:

Grade	New Grade Point
A+	4.3
A	4.0
A-	3.7
B+	3.3
B	3.0

B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
F	0.0

The qualifying Grade Point Average (GPA) will be computed as follows, and based on the grade point of all the subjects:

$$\text{GPA} = \frac{\sum_n \text{Subject Grade Point} \times \text{Subject Credit Value}}{\sum_n \text{Subject Credit Value}}$$

where n = number of all subjects (inclusive of failed subjects) taken by the student up to and including the latest semester/term, but for subjects which have been retaken, only the grade obtained in the final attempt will be included in the GPA calculation

*The subject will be offered to PhD students only.					

Subject Description Form

Subject Code	AMA610
Subject Title	Advanced Probability Theory
Credit Value	3
Level	6
Expected background knowledge	A course in Probability Theory and a course in Advanced Calculus
Objectives	To enable students to have an overview and thorough understanding of the modern probability theory.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ul style="list-style-type: none"> (a) Apply the concepts of probability, conditional probability and conditional expectations. (b) Calculate probabilities, moments and other related quantities based on given distributions. (c) Understand and apply the laws of large numbers and central limit theorems. (d) Understand and apply martingale limit theory. (e) Understand and apply Brownian motion model.
Subject Synopsis/ Indicative Syllabus	Measure theory concepts needed for probability. Expectation, distributions. Laws of large numbers and central limit theorems for independent random variables. Characteristic function methods. Conditional expectations, martingales and martingale convergence theorems. Brownian Motion.
Teaching/Learning Methodology	The subject will be delivered mainly through lectures and tutorials. The teaching and learning approach is mainly problem-solving oriented. The approach aims at the development of solid mathematical techniques and how the techniques can be applied to solving research and real application problems. Students are encouraged to adopt a deep study approach by employing high level cognitive strategies, such as critical and evaluative thinking, relating, integrating and applying theories to practice.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)				
			a	b	c	d	e
	1. CA	40	✓	✓	✓	✓	✓
	2. Exam	60	✓	✓	✓	✓	✓
	Total	100 %					
	<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>The subject focuses on knowledge and understanding of Measure Theory and Probability Theory. The Exam-based assessment is the most appropriate assessment method, including tests and examination. Moreover, assignments are included as a component of continuous assessment so as to keep the students in progress.</p> <p>Continuous Assessment comprises of assignments and a mid-term test. A written examination is held at the end of the semester.</p>						
Student Study Effort Expected	Class contact:						
	▪ Lecture						26Hrs.
	▪ Tutorial						13Hrs.
	Other student study effort:						
	▪ Assignment						30Hrs.
	▪ Self-study						61Hrs.
	Total student study effort						130Hrs.

Subject Description Form

Subject Code	AMA611
Subject Title	Applied Analysis
Credit Value	3
Level	6
Expected background knowledge	A course in Linear Algebra and a course in Advanced Calculus. A course in Partial Differential Equations or Analysis would be highly recommended.
Objectives	To teach students how to use functional analysis to prove various existence, stability and dynamical results of solutions to partial differential equations (PDEs) arising from Physics, Biology, Geometry and Engineering.
Intended Learning Outcomes	Upon satisfactory completion of the subject, students should be able to: <ul style="list-style-type: none"> a. Learn some basic functional analysis; b. Learn how to use inequalities to prove estimates; c. Prove existence and analyze qualitative features of solutions to PDEs; d. Analyze stability and dynamics of solutions to PDEs.
Subject Synopsis/ Indicative Syllabus	<p><i>Basic functional analysis</i></p> <p>Banach and Hilbert Spaces; L_p spaces; Sobolev spaces; inequalities; linear operators and spectrum (discrete and continuous); Compactness.</p> <p><i>Fixed point theorems and applications</i></p> <p>The contraction mapping; local and global well-posedness;</p>

	<p>Gateaux and Frechet derivatives; implicit and inverse function theorems; applications to PDEs arising from Physics, Biology, Geometry and Engineering.</p> <p><i>Variational Calculus</i></p> <p>Functionals; constraints and Lagrange multipliers; minimization by direct methods; saddle points and the Mountain Pass Lemma; Hamiltonian equations.</p>
Teaching/ Learning Methodology	<p>The subject will be delivered mainly through lectures and tutorials. Tutorials will be spent answering questions, reviewing some background material and going over tutorial questions that are related to assignments. In addition, tutorials will be spent discussing some possible topics for the mini projects.</p>

Subject Description Form

Subject Code	AMA 612
Subject Title	Numerical methods for Partial Differential Equations
Credit Value	3
Level	6
Expected background knowledge	A course in Differential Equations and a course in Advanced Calculus
Objectives	This subject is to introduce students to numerical techniques for solving partial differential equations, with applications in physics, engineering, finance and economics.
Intended Learning Outcomes	<p>Upon satisfactory completion of the subject, students should be able to:</p> <ol style="list-style-type: none"> Gain a deep understanding of algorithms of finite difference and finite element methods for solving partial differential equations; Solve simple partial differential equations numerically; Gain a basic knowledge of theories of finite difference and finite element methods; Apply finite difference or finite element methods to solve problems arising in physics, engineering, finance and economics numerically.
Subject Synopsis/ Indicative Syllabus	<p><i>Finite difference methods:</i> Finite difference methods for model problems, Stability, Consistency, Convergence, Lax equivalent theorem, Error estimates.</p> <p><i>Finite element methods:</i> Finite element methods for model problems, Interpolation theory in Sobolev Spaces, Conforming finite elements, Error estimates.</p> <p><i>Time discretization of evolution equations:</i> Parabolic equations and BDF methods, Subdiffusion equations and convolution quadrature, Approximation to nonsmooth solutions.</p>

Teaching/ Learning Methodology	The subject will be delivered mainly through lectures and tutorials. The lectures will be conducted to introduce numerical methods for partial differential equations in the syllabus, which are then reinforced by learning activities involving demonstration, tutorial exercise and assignments.

Subject Description Form

Subject Code	AMA613
Subject Title	Mathematics Seminar
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	A compulsory subject for research students of AMA enrolled for at least six months.
Objectives	The aim of this subject is to provide education on students' oral and written presentations of research results.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ul style="list-style-type: none"> (a) Do research on an agreed topic/area/issue. (b) Gain an in-depth understanding of the literature related to topics of interest. (c) Develop written skills for presentation of research results. (d) Develop oral academic communication and presentation skills.
Subject Synopsis/ Indicative Syllabus	Topics presented to be determined by the participants, coordinated by the subject examiner (coordinator).
Teaching/Learning Methodology	Subject lecturer teaches students about both oral and written presentation skills and chairs all students' oral presentations. Students are required to research, develop and deliver a formal presentation using appropriate audiovisual media support and handouts. The presentation assessment tool includes three graded components: content, communication, and organization. The report is expected to include but not limited to problem identification, methodology, solutions, implementation, interpretations, conclusions, and discussions. Students' presentation materials are required to be submitted to the subject lecturer for checking before class.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a	b	c	d		
	1. Two oral presentations	50%	✓	✓		✓		
	2. One research report	50%	✓	✓	✓			
	Total	100 %						
	Selected topics will be presented by the students. Content, communication and organization will be included in assessing the oral presentation of the student; and content and organization will be included in assessing the research report.							
Student Study Effort Required	Class contact:							
	▪ Three lectures					6 Hrs.		
	▪ Presentation of supervised research topic					10 Hrs.		
	▪ Presentation of selected topic					10 Hrs.		
	Other student study effort:					112 Hrs.		
	▪ Self-study					Hrs.		
	Total student study effort					138 Hrs.

Subject Description Form

Subject Code	AMA614
Subject Title	Mathematical Statistics
Credit Value	3
Level	6
Expected background knowledge	A course in Probability and Statistics and a course in Advanced Calculus
Objectives	To enable students to have an overview and thorough understanding of the modern mathematical statistics theory.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <p>(a) Use the approach of maximum likelihood to obtain the estimator of parameters of distributions and derive the asymptotic properties of estimators</p> <p>(b) Find the UMVU estimators.</p> <p>(c) Apply the method of pivotal quantity to obtain interval estimates.</p> <p>(d) Use the likelihood ratio principle to construct statistical tests.</p> <p>(e) Find uniformly most powerful tests based on the Neyman-Pearson Lemma.</p>
Subject Synopsis/ Indicative Syllabus	This course is concerned with the fundamental theory of statistical inference. Topics include exponential families of distributions, sufficient statistics, complete statistics, convex loss functions, UMVU estimators, performance of the estimators, maximum likelihood estimation, the information inequality, large-sample comparisons of estimators and asymptotic efficiency.
Teaching/Learning Methodology	The subject will be delivered mainly through lectures and tutorials. The teaching and learning approach is mainly problem-solving oriented. The approach aims at the development of solid mathematical techniques and how the techniques can be applied to solving research and real application problems. Students are encouraged to adopt a deep study approach by employing high level cognitive strategies, such as critical and evaluative thinking, relating, integrating and applying theories to practice.

	2. Exam	60	✓	✓	✓	✓	✓
	Total	100 %					
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The subject focuses on knowledge and understanding of Statistical Theory. The Exam-based assessment is the most appropriate assessment method, including tests and examination. Moreover, assignments are included as a component of continuous assessment so as to keep the students in progress. Continuous Assessment comprises of assignments and a mid-term test. A written examination is held at the end of the semester.						
Student Study Effort Expected	Class contact:						
	▪ Lecture					26Hrs.	
	▪ Tutorial					13Hrs.	
	Other student study effort:						
	▪ Assignment					30Hrs.	
	▪ Self-study					61Hrs.	
	Total student study effort					130Hrs.

Subject Description Form

Subject Code	AMA615
Subject Title	Nonlinear Optimization Methods
Credit Value	3
Level	6
Expected background knowledge	A course in Linear Algebra and a course in Advanced Calculus
Objectives	To enable students to learn to use more advanced mathematical and computational techniques applicable in solving real engineering and management problems.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) Understand basic theory of nonlinear optimization. (b) Solve unconstrained optimization problems. (c) Solve constrained optimization problems.
Subject Synopsis/ Indicative Syllabus	<p>I. Unconstrained Optimization</p> <p>1.1 First, second order optimality conditions Convex optimization</p> <p>1.2 First order methods Steepest descent methods, Conjugate gradient methods, Trust region methods</p> <p>1.3 Second order methods Newton methods, Quasi-Newton methods, Trust region Newton methods</p> <p>1.4 Non-differentiable objective function First order optimality condition, Proximal point methods, Smoothing methods</p> <p>II. Constrained Optimization</p> <p>2.1 First, second order optimality conditions, KKT conditions, Constraint Qualification</p> <p>2.2 Penalty methods</p> <p>2.3 Augmented Lagrangian methods (ALM)</p> <p>2.4 Alternating direction method of multipliers (ADMM)</p> <p>III. Optimization methods in Data Science</p> <p>3.1 Least absolute shrinkage and selection operator (Lasso), Semi-smooth Newton methods</p> <p>3.2 Folded concave penalized estimation, Difference-convex (DC) optimization methods</p> <p>3.3 Non-Lipschitz regularization, Smoothing methods</p> <p>3.4 Composite nonsmooth nonconvex optimization in deep learning</p>
Teaching/Learning	The subject will be delivered mainly through lectures and tutorials. The

Methodology	teaching and learning approach is mainly problem-solving oriented. The approach aims at the development of mathematical techniques and how the techniques can be applied to solving problems. Students are encouraged to adopt a deep study approach by employing high level cognitive strategies, such as critical and evaluative thinking, relating, integrating and applying theories to practice.

Subject Description Form

Subject Code	AMA 616
Subject Title	Statistics for Finance
Credit Value	3
Level	6
Expected background knowledge	A course in Statistical Analysis and a course in Advanced Calculus
Objectives	To give a comprehensive introduction into important ideas of financial mathematics and statistics for the modelling and statistical analysis of financial data.
Intended Learning Outcomes	<p>Upon satisfactory completion of the subject, students should be able to:</p> <ol style="list-style-type: none"> Gain a deep understanding of option pricing model and financial time series; Solve simple option pricing problems numerically; Carry out basic statistical analysis on financial data; Apply option pricing theory to model new financial products and various statistical models to model the financial time series.
Subject Synopsis/ Indicative Syllabus	<p><i>Option pricing theory</i></p> <p>Derivatives, Arbitrage, Wiener process, binomial processes, geometric random walks, stochastic integrals, Ito's Lemma, Black-Scholes model, hedging.</p> <p>European options, Binomial model, Cox-Ross-Rubinstein approach.</p> <p>American options, arbitrage relationship, trinomial model, numerical techniques, applications</p>

	<p><i>Financial Time series analysis</i></p> <p>Econometric models, the random walk hypothesis, unit root test, ARIMA models.</p> <p>ARCH and GARCH models, Exponential GARCH, stochastic volatility, multivariate GARCH models, applications.</p>
Teaching/ Learning Methodology	The subject will be delivered mainly through lectures and tutorials, which are then reinforced by learning activities involving demonstration, tutorial exercises and assignments.

Subject Description Form

Subject Code	AMA617
Subject Title	Optimal Stopping and Stochastic Control in Mathematical Finance
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	A course in stochastic calculus and a course in partial differential equations
Objectives	This subject is to introduce students to the fundamental theory of optimal stopping and stochastic control in finance.
Intended Learning Outcomes <i>(Note 1)</i>	<p>Upon completion of the subject, students will be able to:</p> <ul style="list-style-type: none"> a. Gain a deep understanding of the American option pricing model, portfolio selection problems with and without market frictions, and capital structure models. b. Learn how to conduct theoretical analysis for optimal stopping time problems and singular stochastic control problems; c. Gain a basic knowledge of the finite difference method for HJB equations arising from finance.
Subject Synopsis/ Indicative Syllabus <i>(Note 2)</i>	American option pricing, Merton's model, dynamic mean-variance analysis, Merton's model with transaction costs, and Merton's problem with capital gains taxes, capital structure, time-inconsistency, optimal stopping problems, stochastic control, singular control, impulse control, HJB equations, viscosity solutions, variational inequality equations, numerical solutions, etc.
Teaching/Learning Methodology <i>(Note 3)</i>	The subject will be delivered mainly through lectures and tutorials. Assignments and projects will be also given.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon subject completion. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

Subject Description Form

Subject Code	AMA618
Subject Title	Advanced Topics in Applied Mathematics
Credit Value	3
Level	6
Expected background knowledge	A course in calculus, linear algebra, and basic functional analysis
Objectives	This subject is to introduce students to some advanced topics in applied mathematics.
Intended Learning Outcomes <i>(Note 1)</i>	<p>Upon completion of the subject, students will be able to:</p> <ul style="list-style-type: none"> a. Learn how to use generalized functions, Fourier transform, singular integrals, Sobolev spaces, and related concepts; b. Learn how to use Laplace transform and semigroup theory to study time-dependent partial differential equations; c. Learn how to construct numerical approximations by using Laplace transform and semigroup techniques.
Subject Synopsis/ Indicative Syllabus <i>(Note 2)</i>	Banach spaces, generalized functions, Fourier transform, Fourier multipliers, singular integrals, Sobolev spaces, Laplace transform, second-order elliptic equations, heat equation, subdiffusion equation
Teaching/Learning Methodology <i>(Note 3)</i>	The subject will be delivered mainly through lectures and tutorials. Assignments and projects will be also given.

Assessment Methods in Alignment with Intended Learning Outcomes <i>(Note 4)</i>	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="3">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th></tr><tr><td>1. Reading List and References																																																																

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

Subject Description Form

Subject Code	AMA67711																																												
Subject Title	Research Seminars																																												
Credit Value	1																																												
Level	6																																												
Pre-requisite / Co-requisite/ Exclusion	A compulsory subject for research students of AMA																																												
Objectives	The aim of this subject is to provide students with the opportunity to learn the latest advances in Applied Mathematics and facilitate communications with experts in the field.																																												
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) Gain a good understanding of different advanced topics. (b) Learn oral academic communication and presentation skills.																																												
Subject Synopsis/ Indicative Syllabus	Seminars to be attended are determined by the students and chief supervisors.																																												
Teaching/Learning Methodology	<p>Students are required to attend at least 10 research seminars per year, in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars every year.</p> <p>Part-time students are required to attend at least 10 research seminars per two years, in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars once every two years.</p> <p>Chief Supervisors are required to assess the report (with a pass or failure grade). Students who failed to submit a report to the satisfaction of their Chief Supervisor are required to make a re-submission until a pass grade is obtained.</p>

Subject Code	HTI6081
Subject Title	Ethics: Research, Professional & Personal Perspectives
Credit Value	1
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objective	<ul style="list-style-type: none"> To equip students with a deep appreciation of ethical guidelines and codes of conduct that they can apply in their research studies at PolyU and in their future professional and personal lives.
Intended Learning Outcomes <i>(Note 1)</i>	<p>On successful completion of this subject, students will be able to:</p> <ol style="list-style-type: none"> 1. Demonstrate knowledge and understanding of the need for ethical behavior and guiding codes of ethics in research and the professions. 2. Understand, discuss and apply ethical principles and codes across a range of disciplines and scenarios 3. Demonstrate awareness of current ethical issues and problems in relation to their own discipline and research area 4. Critically analyze and discuss scenarios cases of possible or actual ethical misconduct 5. Discuss how the guiding principles of ethics in research extend and apply to business, professional and personal codes of conduct and why this is important to the integrity and the well-being of the business, the professions, and our community. 6. Show a fundamental understanding of the issues of copyright, plagiarism, and proper citation, and be able to apply this in their own work.

Subject Synopsis/ Indicative Syllabus (Note 2)	<ul style="list-style-type: none"> • The need for ethics training and the meaning of ethical behavior in research: case studies, disasters, and learning by the mistakes of others • Philosophy and codes of ethics and their origins • Culture, religion, and the law – how these relate to ethical codes of conduct • Obtaining ethical approval for a research project: procedures and processes • Ethics in life science, humanities, education, business, and industry: common issues, guiding principles, discipline-specific scenarios • Ethics and human behavior: individual, professional, and societal responsibilities • Recent ethical issues affecting Hong Kong and society in general • Ethical use of information in thesis writing: understanding copyright, plagiarism, and proper citation

Teaching/Learning Methodology (Note 3)	Lecture/seminar/workshop							
Assessment Methods in Alignment with Intended Learning Outcomes (Note 4)	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			1	2	3	4	5	6
	1. Group assignment on discipline-specific scenario/case study analysis	60%	√		√			√
	2. Oral presentation	25%					√	√
	3. Attendance	15%			√			
	Total	100 %						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: 1. Discipline-specific scenario/case study analysis will assess the ability to identify and analyze ethical issues in the student’s own discipline and to present a coherent and detailed critique and plan on how these could be avoided or resolved (giving sources and written work accompanied by a Turn-it-in Report). The group assignment will assess the student’s ability to identify, discuss and analyze ethical principles and issues from a wide perspective, and evaluate how individuals, professions, and societies benefit from following ethically acceptable behavior and practices. 2. Oral presentations will assess the students’ ability to present and argue points in support of their rationale.

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	ENGL6016
Subject Title	Advanced Academic English for Research Students: Publishing and Presenting
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	The objective of the subject is to enable research postgraduate students to publish successfully in international journals and deliver effective conference presentations. This is achieved by equipping students with the essential English language skills and linguistic knowledge to effectively communicate the background, rationale, findings, and significance of their research. Students will be guided systematically to (1) improve their academic English; (2) acquire and apply knowledge of the generic and linguistic features of conference presentations and research articles; and (3) increase the persuasiveness of their spoken and written discourse. The primary focus will be on writing research articles.
Intended Learning Outcomes (Note 1)	Upon completion of the subject, students will be able to: <ul style="list-style-type: none"> a. Be familiar with the differences between spoken and written academic English; b. Analyze and apply generic structures and linguistic features in research writing; c. Write research articles in clear, accurate and appropriate English; d. Prepare articles for publication in light of comments from editors and reviewers; e. Structure and deliver clear and persuasive presentations in English.
Subject Synopsis/ Indicative Syllabus (Note 2)	<p>Part 1 – Publishing in international journals: (2/3)</p> <ul style="list-style-type: none"> ▪ Interacting with readers; ▪ Writing effective introductions and literature reviews; ▪ Describing research methods; ▪ Discussing the implications and significance of the findings; ▪ Drawing conclusions; ▪ Writing abstracts; and ▪ Addressing editors' and reviewers' comments. <p>Part 2 – Delivering an effective conference presentation: (1/3)</p> <ul style="list-style-type: none"> ▪ Structuring and delivering conference presentations in clear and appropriate academic English; ▪ Interacting with an audience and responding to questions.

Teaching/Learning Methodology (Note 3)	A learner-centered and highly interactive mode of teaching will be adopted. Students will engage in activities where they can share their experience and concerns, put forth their own thinking and comment on each other’s research ideas, and critique each other’s academic writings. Students will be encouraged and guided to discover for themselves the various language linguistic and generic features of successful presentations and academic writing through intellectually challenging tasks.						
Assessment Methods in Alignment with Intended Learning Outcomes (Note 4)	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)				
			a	b	c	d	e
	1. Individual presentation	30%	✓	✓	✓		
	2. Term paper	50%			✓	✓	✓
	3. Class participation	20%	✓	✓	✓	✓	✓
	Total	100 %					
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: <u>Individual presentation</u> Students will prepare a 15-minute conference presentation in which they demonstrate their ability to use appropriate academic English and engage effectively with the audience. <u>Term paper</u> This assignment requires students to critique a research article to demonstrate their knowledge of the generic and linguistic features of research articles. Their ability to present ideas and arguments coherently and persuasively using appropriate academic English will also be assessed. The term paper could be in the form of a research article from the student’s field. <u>Class participation</u> Students’ active participation and engagement with the learning activities will be part of the assessment of the subject.						

Student Study Effort Expected	Class contact:	
	▪ Interactive lectures	39 Hrs.
	▪	Hrs.
	Other student study effort:	
	▪ Reading	42 Hrs.
	▪ Preparation for assignments	30 Hrs.
	Total student study effort	111 Hrs.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon subject completion. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	ELC6011
Subject Title	Presentation Skills for Research Students
Credit Value	2
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject is designed to improve research students' academic speaking proficiency, enhance their awareness of academic conventions during an academic discussion/presentation, and develop their skills in using clear, appropriate, persuasive and analytical language for their delivery of effective academic presentations.
Intended Learning Outcomes (Note 1)	Upon completion of the subject, students will be able to: <ul style="list-style-type: none"> a. organise academic presentations logically by following academic conventions b. present research contribution by critically analysing previous research; c. use clear, appropriate, persuasive and analytic language for presentations at seminars, conferences and viva: and d. defend research logically, critically, and persuasively.
Subject Synopsis/ Indicative Syllabus (Note 2)	<ol style="list-style-type: none"> 1. Critical analysis of prior research Understanding academic presentation process and the structure; identifying language features appropriate for academic speaking settings. 2. Awareness of academic conventions Developing awareness of citation practices, and language use adopted in the related disciplines. 3. Inter and intra section connections Using effective signpost language to organize and connect different parts of an academic presentation. 4. Clear, appropriate, persuasive, and analytical language use Summarising, evaluating, and citing sources; describing and discussing research data; objectively evaluating research contribution.

Teaching/Learning Methodology (Note 3)	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input, class discussion both formally and informally, and presentations both individually and in groups. Elements of the flipped classroom are integrated in the subject delivering. Peer feedback, self-reflection and critique of student presentations are also an important part of the instructional scaffolding.							
Assessment Methods in Alignment with Intended Learning Outcomes (Note 4)	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a	b	c	d		
	Presenting an effective introduction and literature review - video submission	40%	✓	✓	✓			
	Delivering an effective research presentation – in-class individual presentation	60%	✓	✓	✓	✓		
	Total	100%						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Presenting an effective Introduction and Literature review of a study is most challenging for research students. To help them develop related skills, the subject requires that students present the Introduction and Literature review sections only in Assessment 1. This presentation will be submitted as a short video and thus allows students multiple attempts during the delivery process. After teacher feedback, peer feedback and self-reflection on the performance of Assessment 1, students are better prepared for a full presentation of a research paper required for Assessment 2.							
Student Study Effort Expected	Class contact:							
	▪ Seminars						20 Hrs.	
	▪ Assessment						6 Hrs.	
	Other student study effort:							
	▪ Self-study/preparation for assessments						52 Hrs.	
	▪ Total student study effort						78 Hrs.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon subject completion. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4:Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

(Form AR 140) 8.2020

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	ELC6012
Subject Title	Thesis Writing for Research Students
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	ELC6011
Objectives	This subject aims to improve research students' academic writing proficiency, enhance their understanding of the academic audience, develop their awareness of academic conventions, and develop their skills in using clear, appropriate, persuasive, and analytical language in thesis writing.
Intended Learning Outcomes (Note 1)	<p>Upon completion of the subject, students will be able to present their research effectively in a thesis through:</p> <ol style="list-style-type: none"> presenting the study clearly, appropriately and concisely in the Abstract; providing the Introduction analytically; reviewing the literature critically; analysing the appropriateness of the methodology used in the study, reporting and discussing the findings of the study; and discussing the significance of the study in the Conclusion. <p>To achieve the above outcomes, students are expected to use language, text structures, and cohesive devices appropriate to the academic audience, select and present information analytically, concisely and appropriately, examine and cite sources critically, and analyse the impact and significance of the research persuasively.</p>
Subject Synopsis/ Indicative Syllabus (Note 2)	<ol style="list-style-type: none"> Critical analysis of prior research Understanding research thesis writing process and the structure of a thesis; identifying language features of thesis writing. Awareness of academic conventions Developing awareness of citation practices, referencing format and language use adopted in the related disciplines. Inter and intra paragraphing connections Using effective cohesive devices to plan, organize and connect different parts of a research thesis.

	<p>4. Clear, appropriate, persuasive and analytical language use</p> <p>Summarising, evaluating and citing sources; describing and discussing research data; objectively evaluating research contribution; writing, revising, and proofreading written texts.</p>																																														
<p>Teaching/Learning Methodology</p> <p>(Note 3)</p>	<p>The study method is primarily seminar-based. Activities include teacher input as well as individual and group work involving writing practice, evaluation of texts, mini-presentations and discussions. Practical work will involve analysing texts such as journal articles and research theses that are relevant to students’ research areas. Students will be provided with opportunities to apply the language skills acquired to the preparation of their own thesis. Students will be referred to information on the Internet and the ELC’s Centre for Independent Language Learning.</p> <p>Learning materials developed by the English Language Centre are used throughout this course. Additional reference materials will be recommended as required.</p>																																														
<p>Assessment Methods in Alignment with Intended Learning Outcomes</p> <p>(Note 4)</p>	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th><th>f</th></tr><tr><td>1. Writing an introduction for a research study (draft)</td><td>20%</td><td></td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td></tr><tr><td>2. Writing an introduction for a research study (final)</td><td>30%</td><td></td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td></tr><tr><td>3. The assessments require that students introduce the background, rationale and objectives of their research, review the literature and establish the niche in their research area, and describe the methods used in their study to occupy the niche (ref. LOs (b), (c) and (d)).</p> <p>Assessment 3 requires that students collect learning materials that are conducive to their writing-up of a research thesis, and provide annotated thesis excerpts to illustrate their understanding of the structure and language use specific to each thesis chapter (ref. LOs (a) to (f)).</p>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						a	b	c	d	e	f	1. Writing an introduction for a research study (draft)	20%		✓	✓	✓			2. Writing an introduction for a research study (final)	30%		✓	✓	✓			3. Developing an e-Portfolio for thesis writing	50%	✓	✓	✓	✓	✓	✓	Total	100 %

Intended Learning Outcome of Individual MPhil Programme against the University's Policy & Guidelines on Learning Outcomes for Graduates of MPhil Programmes*

Programme Title: Research Postgraduate Programme in Applied Mathematics

Hosted by: Department of Applied Mathematics

Institutional Learning Outcomes	Intended Learning Outcomes of Individual Research Degree Programme
<p>Research and Scholarship Excellence</p> <p>MPhil graduates of PolyU should demonstrate advanced competence in research methods, possess in-depth knowledge and skills in their area of study and attain the ability to apply their knowledge and act as leaders in analyzing and solving identified issues and problems in their area of study. They should also be able to disseminate/communicate effectively their research findings in publications, conferences and classrooms.</p>	<p>Research and Scholarship Excellence</p> <p>MPhil graduates of AMA should develop and demonstrate research skills and knowledge in applied mathematics; critically analyze new and complex information from real problems, and effectively utilize research methodologies in applied mathematics.</p>
<p>Originality</p> <p>MPhil graduates of PolyU will be versatile problem solvers with good mastery of critical and creative thinking methodologies. They can generate practical and innovative solutions to problems in their area of study.</p>	<p>Originality</p> <p>MPhil graduates of AMA should</p> <ol style="list-style-type: none"> 1. recognize the importance of research ethics; 2. provide novel solutions to research problems and effectively interpret new research results.
<p>Lifelong Learning Capability</p> <p>MPhil graduates of PolyU will have an enhanced capability for continual professional development through inquiry and reflection on knowledge in their area of study.</p>	<p>Lifelong Learning Capability</p> <p>MPhil graduates of AMA should learn up-to-date research advances and developments in applied mathematics.</p>

Intended Learning Outcome of Individual PhD Programme against the University's Policy & Guidelines on Learning Outcomes for Graduates of PhD Programmes*

Programme Title: Research Postgraduate Programme in Applied Mathematics

Hosted by : Department of Applied Mathematics

Institutional Learning Outcomes	Intended Learning Outcomes of Individual Research Degree Programme
Research and Scholarship Excellence PhD graduates of PolyU should demonstrate state-of-the-art expertise and knowledge in their area of study, possessed superior competence in research methodologies and contribute as leaders in creating new knowledge through analysis, diagnosis and synthesis. They should also be able to disseminate/communicate their research ideas and findings effectively and efficiently in publications, conferences and classrooms.	Research and Scholarship Excellence PhD graduates of AMA should 1. develop and demonstrate research skills and knowledge in applied mathematics; critically analyze new and complex information from real problems, and effectively utilize research methodologies in applied mathematics; 2. present results with good scientific writing and presentation skills.
Originality PhD graduates of PolyU will be able to think out of the box. They will be innovative problem solvers with excellent mastery of critical and creative thinking methodologies. They will create original solutions to issues and problems pertaining to their area of expertise and the society in general.	Originality PhD graduates of AMA should 1. recognize the importance of research ethics; 2. provide novel solutions to research problems and effectively interpret new research results.
Lifelong Learning Capability PhD graduates of PolyU will demonstrate the ability to engage in an enduring quest for knowledge and an enhanced capability for continual academic/professional development through self-directed research in their area of study.	Lifelong Learning Capability PhD graduates of AMA should learn up-to-date research advances and developments in applied mathematics.
