

Subject Description Form

Subject Code	AMA1110																															
Subject Title	Basic Mathematics I – Calculus and Probability & Statistics																															
Credit Value	3																															
Level	1																															
Pre-requisite	Nil																															
Objectives	This subject aims to introduce students to the basic concepts and applications of elementary calculus and statistics. Emphasis will be on the understanding of fundamental concepts and the use of mathematical techniques in handling practical problems in science and engineering.																															
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <p>(a) apply analytical reasoning to solve problems in science and engineering;</p> <p>(b) make use of the knowledge of mathematical/statistical techniques and adapt known solutions to various situations;</p> <p>(c) apply mathematical modeling in problem solving;</p> <p>(d) demonstrate abilities of logical and analytical thinking.</p>																															
Subject Synopsis/ Indicative Syllabus	<p><u>Elementary calculus</u>: Limit and continuity, derivatives and their geometric meaning, rules of differentiation including chain rule, Leibniz’s rule and L’Hopital’s rule, exponential and logarithmic functions, trigonometric functions and their inverses, hyperbolic and inverse hyperbolic functions, applications of differential calculus.</p> <p><u>Elementary Probability and Statistics</u>: Descriptive statistics, random variables, probability and probability distributions, binomial, Poisson and normal distributions, applications.</p> <p>Population and random samples. Sampling distributions related to sample mean, sample proportions, and sample variances. Concepts of a point estimator and a confidence interval. Point and interval estimates of a mean and the difference between two means.</p>																															
Teaching/Learning Methodology	Basic concepts and elementary techniques of differential and integral calculus and elementary statistics will be taught in lectures. These will be further enhanced in tutorials through practical problem solving.																															
Assessment Methods in Alignment with Intended Learning Outcomes	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="4">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> </tr> </thead> <tbody> <tr> <td>1. 2. Examination	60%	✓	✓	✓	✓																											
Total	100 %																															

	<p>Continuous Assessment comprises of assignments, in-class quizzes, online quizzes and a mid-term test. An examination is held at the end of the semester.</p> <p>Questions used in assignments, quizzes, tests and examinations are used to assess students' level of understanding of the basic concepts and their ability to use mathematical techniques in solving problems in science and engineering.</p> <p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p><i>The subject focuses on understanding of basic concepts and application of techniques in differential/integral calculus, elementary statistics. As such, an assessment method based mainly on examinations/tests/quizzes is considered appropriate. Furthermore, students are required to submit homework assignments regularly in order to allow subject lecturers to keep track of students' progress in the course.</i></p>	
Student Study Effort Expected	Class contact:	
	<ul style="list-style-type: none"> ▪ Lecture 	26 Hrs.
	<ul style="list-style-type: none"> ▪ Tutorial 	13 Hrs.
	Other student study effort:	
	<ul style="list-style-type: none"> ▪ Homework and self-study 	81 Hrs.
	Total student study effort	120 Hrs.
