

## Subject Description Form

<b>Subject Code</b>	AMA2601
<b>Subject Title</b>	Statistics for Finance Analytics
<b>Credit Value</b>	3
<b>Level</b>	2
<b>Pre-requisite</b>	Basic Statistics I (AMA1006) or equivalent
<b>Exclusion</b>	Introduction to Statistics (AMA2634 / AMA2634A)
<b>Objectives</b>	This subject is to introduce students to the compilation of statistical data, common probability distributions and elements of statistical inference.
<b>Intended Learning Outcomes</b>	<p>Upon satisfactory completion of the subject, students should be able to:</p> <ol style="list-style-type: none"> <li>a. apply knowledge on descriptive statistics to organize and summarize financial data;</li> <li>b. find confidence intervals for the sample mean, sample variance and sample proportion;</li> <li>c. discuss the concepts of hypothesis testing, including the type I error, type II error, and one-sided and two sided tests;</li> <li>d. apply the concepts of hypothesis testing to simple statistical problems;</li> <li>e. use the Pearson's chi-square test for goodness of fit;</li> <li>f. carry out nonparametric tests for simple statistical problems;</li> <li>g. use statistical software, such as R, to visually present data and to perform simple statistical analyses for problems in finance.</li> </ol>
<b>Subject Synopsis/ Indicative Syllabus</b>	<p><i>Descriptive and Visual Statistics (8 hours)</i> Descriptive statistics: mean, mode, median, percentiles, variance, standard deviation, coefficient of variation. Frequency distributions and cumulative frequency distributions. Use statistical software to produce bar plots, boxplots, histograms, and ogives.</p> <p><i>Estimation of Parameters (12 hours)</i> Point and interval estimators of mean, proportion, variance, and the difference between two means or two proportions. The normal distribution and the t-distribution. Sample size calculation for a pre-specified estimation accuracy. Applications to finance analytics.</p> <p><i>Test of Hypotheses (13 hours)</i> Basic concepts in hypothesis testing: statistical hypotheses, type I and type II errors, one-sided and two-sided tests, significance levels, test statistics, and critical regions. Tests for population mean, population proportion, population variance, difference between two means, and difference between two proportions. The chi-square distribution and the Pearson's chi-square test for goodness of fit. Multiple-testing correlation: Bonferroni correction. Applications to finance analytics.</p>

	<p><i>Nonparametric Tests (6 hours)</i> The sign test, the signed rank test, the rank sum test, and the Kolmogrov-Smirnov test.</p>								
<b>Teaching/Learning Methodology</b>	The subject will be delivered mainly through lectures and tutorials. The lectures will be conducted to introduce the basic statistics concepts of the topics in the syllabus, which are then reinforced by learning activities including demonstration, tutorial exercise and assignments.								
<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	Specific assessment methods	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						
			a	b	c	d	e	f	g
	1. Assignments/Quizzes	15%	✓	✓	✓	✓	✓	✓	✓
	2. Test	25%	✓	✓	✓	✓			
	3. Examination	60%	✓	✓	✓	✓	✓	✓	
Total	100 %								
	<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The subject focuses on knowledge, skill and understanding of <b>Introduction to Statistics</b>, thus, <b>Exam-based assessment</b> is the most appropriate assessment method, including 25% test and 60% examination. Moreover, 15% worth of assignments and quizzes are included as a component of continuous assessment so as to keep the students in progress. Continuous Assessment comprises of assignments and/or quizzes, and tests. A written examination is held at the end of the semester.</p>								
<b>Student Study Effort Expected</b>	Class contact:								
	▪ Lecture		26 Hrs.						
	▪ Tutorial		13 Hrs.						
	Other student study effort:								
	▪ Assignment/Quiz		26 Hrs.						
	▪ Self-study		40 Hrs.						
	Total student study effort		105 Hrs.
