PROGRAMME DOCUMENT FOR RESEARCH DEGREE PROGRAMMES

1.General Information

Programme Title	Doctor of Philosophy (PhD)/Master of Philosophy (MPhil) in Applied Physics					
Programme Code:	From 2018/19 cohort onwards 11601 (full-time FD/FTD/FTM) 11601 (part-time PD/PTD/PTM)					
	Before 2018/19 cohort 88011 (full-time PhD), 88111 (part-time PhD), 88012 (full-time MPhil), 88112 (part-time MPhil)					
Host Department	Department of Applied Physics					
Medium of Instruction	English					
Mode of Study	Full-time/Part-time (FT/PT)					
Duration	 4-Year PhD FT: 48 months normal, 72 months maximum PT: 96 months normal, 108 months maximum 3-Year PhD FT: 36 months normal, 60 months maximum PT: 72 months normal, 84 months maximum 2-Year MPhil FT: 24 months normal, 36 months maximum PT: 48 months normal, 60 months maximum 					
Requirement for Graduation	In addition to English enhancement subjects, students have to complete the following Coursework Components 4-Year PhD - At least 22 credits					
	3-Year PhD - At least 15 credits					
	2-Year MPhil - At least 9 credits					
	Research Components					
	A thesis and an oral examination on the thesis are required for both PhD and MPhil.					
Final Award	M.Phil. or Ph.D. degree dependent on the enrollment					

2.Programme Structure

Coursework components:	 4-Year PhD (22 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars III (4 credits) Practicum (2 credits) 5 Elective Subjects (15 credits) 							
	 3-Year PhD (15 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars II (3 credits) Practicum (2 credits) 3 Elective Subjects (9 credits) 							
	 2-Year MPhil (9 credits) Ethics: Research, Professional & Personal Perspectives (1 credit) Research Seminars I (2 credits) 2 Elective Subjects (6 credits) 							
	With effect from 2021/22 cohort onwards, all RPg students shall b required to take the Research Language Skills Assessment (RLSA) is their first semester of study at PolyU to be arranged by ELC. Based of their performance of the RLSA, students will need to take relevant subjects according to the following arrangement.							
	RLSA performance ¹	Required English enhancement subjects						
	Band 1 in both Writing, and Speaking tasks	exempted						
	Band 2 or above in both Writing, and Speaking tasks	ENGL6016: Advanced Academic English for Research Students: Publishing and Presenting						
	Band 3 or below in either Writing, or Speaking tasks	ELC6011 and ELC6012 ELC6011: Presentation Skills for Research Students ELC6012: Thesis Writing for Research Students						
	Note 1: Band 1 is the highest grade and Ba	and 5 the lowest.						
	Before thesis submission, students are required to take and pass the above English enhancement subjects.							

Research components:	Students are required to submit a thesis when their study is completed. The thesis should summarize the findings of the student's original and independent research.
	An oral examination on the submitted thesis is required for the student. The oral examination comprises the following parts where the sequence is to be determined by individual board of examiners (BoE):
	• A closed session in which the BoE holds a preliminary discussion in the student's absence.
	• A full oral presentation by the student to the BoE and others in attendance.
	• An open question period, involving the members of the BoE and others in attendance. Questions from the floor must be addressed through the Chair of the BoE, who will exercise discretion on the appropriateness of a question to be put forward to the examinee.
	• A session involving further discussion between the student and the BoE.
	• A closed session, in which the BoE assesses the thesis and the student's performance in the student's absence.
	• A closed session, in which the BoE informs the student of the BoE's recommendations.

3.The Rationale, Aims and Intended Learning Outcome of the Programme

University Overarching Aims of Research Degree Programmes	Intended Learning Outcomes of M.Phil. and Ph.D. Programmes*
 The research degree programmes are designed in such a way to enable the student to: a. acquire competence in research methods and scholarship; and b. display sustained independent effort and independent original thought. The PhD programmes should target to produce academics or industrial R & D professionals. 	 Upon completion of the programmes, Ph.D. and M.Phil. students will be able to a1. solve theoretical and experimental problems of the related research field of studies with the previous accumulated knowledge and problem solving skills, a2. communicate clearly and effectively in English, excel in report writing and presentation skill, a3. collaborate smoothly with others in team work, demonstrate a sense of responsibility, accountability, leadership and team spirit, b1. develop capability of independent thinking, and c1. possess a desire for life-long learning and self-learning. In addition to the above learning outcomes (a1-a3,b1 and c1), PhD students are also expected to be able to a4. Have more in-depth understanding on the knowledge of the research subjects and expected to have stronger publication record. b2. Expected to discover new problems and formulate the problems to analyze, evaluate, synthesize and propose solutions to problems of a general nature with innovative/creative ideas where appropriate. c2. Can develop a future career in their field of professions making use of their depth foundation built in the study as academics, researchers or industrial R&D professionals.

4.The Curriculum

M.Phil /Ph.D. in Applied Physics

Stage/ Semester	Subject Code	Subject	Credit	Compulsory/ Elective	Pre- requisite	Remarks
1/1	HTI6081	Ethics: Research, Professional & Personal Perspectives	1	C	None	
All	AP601(A/B)	Research Seminars I	1	С	None	Students are recommended to complete one credit per
All	AP602(A/B/C)	Research Seminars II	1	С	None	year (for full-time students) or per two years (for part-
All	AP603 (A/B/C/D)	Research Seminars III	1	C	None	time students) to fulfil the above- mentioned requirement, with an overall assessment grade of Pass and Fail. However, as deemed appropriate by the Chief Supervisor, they are allowed to complete at most two credits per year (for full-time students) or per two years (for part-time students to fulfil the research seminar credit requirement.
D	AP605	Practicum	2	C	None	Students are allowed to complete these two credits any time before they graduate. They can choose to complete these two credits in two different semesters or within the same semester, subject to the approval of the Chief Supervisor. Stipend recipients are <u>not</u> allowed to fulfill part of their departmental training requirement through the completion of the Practicum credits as Practicum is credit-bearing and part of the coursework requirements. For students who are required to undertake teaching supporting activities, they should be required to complete the training programmes orgainsed by the EDC and ELC before the commencement of any teaching supporting activities.
D	AP616	Smart Materials and Structures	3	E	None	
D	AP617	Advanced Instrumentation for	3	E	None	

		Materials Analysis				
D	AP618	Science and Technology of Micro- and Nano- systems	3	E	None	
D	AP619	Microfabrication Laboratory	3	E	None	
D	AP620	Atomistic View of Matter: Modeling & Simulation	3	E	None	
D	AP621	Advanced Electron Microscopy: Theory and Practice	3	E	None	
D	AP622	Emerging Memory Technologies	3	E	AP20012, AP30011, AP40006 or equivalent	
D	AP6912	Guided Study in Polymer Electronics	3	E	None	For the number of guided study subjects that can be taken,
D	AP6913	Guided Study in Optical Properties of Luminescent Materials	3	E	None	no more than 10 credits for 4-year full-time PhD/8-year part-time PhD, No more than 6 credits for 3-year full-time PhD/6-year
D	AP6914	Guided Study in Ferroelectric Materials	3	E	None	part-time PhD, and No more than 4 credits for 2-year full-time PhD/4-year part-time PhD,
D	AP6915	Guided Study on Research Topics in Applied Physics	3	E	None	are allowed.

D	ELC6011	Presentation Skills for Research Students	2	С	None	Before thesis submission, students are required to take and pass this English enhancement subjects.
D	ELC6012	Thesis Writing for Research Students	3	С	ELC6011	
D	ENGL6016	Advanced Academic English for Research Students: Publishing and Presenting	3	С	None	

D – dependent on the arrangement from offering department.

Elective subjects (E) offered by other departments/universities

For PhD or MPhil students who find difficulty in taking the suggested elective courses from the curriculum, they could propose other available research postgraduate subjects offered by other departments/universities as their elective courses but subject to approval from DRC.

Curriculum Map

The curriculum map gives a holistic view of the programme to which each intended learning outcome will be taught and assessed in the programme (see "The Rationale, Aims and Intended Learning Outcome of the Programme" section). The corresponding curriculum map is given in the Appendix - Attachment II.

5.Summary of the Subject Information

Subject Code	Subject Name Credit Pre- requisite			Teaching Methods	Assessment Methods			
HTI6081	Ethics: Research, Professional & Personal Perspectives	nal & workshop		Report /presentation				
AP601 (A/B)	Research Seminars I	1	None	seminar/ workshop/ conference	Attendance/ report			
AP602 (A/B/C)	Research Seminars II	1	None	seminar/ workshop/ conference	Attendance/ report			
AP603 (A/B/C/D)	Research Seminars III	1	None	seminar/ workshop/ conference	Attendance/ report			
AP605	Practicum	2	None	Lecture and Hands- on experiments	SFQ, HoD/DoS/delegate review			
AP616	Smart Materials and Structures	3	None	Lecture and Hands- on experiments	Continuous assessment and examination			
AP617	Advanced Instrumentation for Materials Analysis	3	None	Lecture and Hands- on experiments	Continuous assessment and examination			
AP618	Science and Technology of Micro- and Nano- systems	3	None	Lecture and Hands- on experiments	Continuous assessment and examination			
AP619	Microfabrication Laboratory	3	None	Lecture and Hands- on experiments	Continuous assessment and Test			
AP620	Atomistic View of Matter: Modeling & Simulation	3	None	Lecture and Hands- on experiments	Continuous assessment and examination			
AP621	Advanced Electron Microscopy: Theory and Practice	3	None	Lecture and Hands- on experiments	Continuous assessment and examination			
AP622	Emerging Memory Technologies	3	AP20012, AP30011, AP40006 or equivalent	Lecture and Hands on experiments	Continuous assessment and Project			
AP6912	Guided Study in Polymer Electronics	3	None	Personal supervision and training	Report			
AP6913	Guided Study in Optical Properties of Luminescent Materials	3	None	Personal supervision and training	Report			

AP6914	Guided Study in Ferroelectric Materials	3	None	Personal supervision and training	Report
AP6915	Guided Study on Research Topics in Applied Physics	3	None	Personal supervision and training	Report
ELC6011	Presentation Skills for Research Students	2	None	Seminar	Continuous assessment
ELC6012	Thesis Writing for Research Students	3	ELC6011	Seminar	Continuous assessment
ENGL6016	Advanced Academic English for Research Students: Publishing and Presenting	3	None	Lecture and interactive activities	Class Participation/ Individual Presentation/ Term Paper

The detailed Subject Description Forms of all subjects are given in the Appendix.

6. Terms and Conditions

This Programme Document is subject to review and changes which the programme offering Faculty/Department/School can decide to make from time to time. Students will be informed of the changes as and when appropriate.

This Document should be read together with the "Regulations and Administrative Procedures for the Degrees of MPhil and PhD" and the "Research Student Handbook".

Attachment III

Subject Code	HTI6081
Subject Title	Ethics: Research, Professional & Personal Perspectives
Credit Value	1
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objective	• To equip students with a deep appreciation of ethical guidelines and codes of conduct that they can apply in their research studies at PolyU and in their future professional and personal lives.
Intended Learning Outcomes (Note 1)	 On successful completion of this subject, students will be able to: 1. Demonstrate knowledge and understanding of the need for ethical behavior and guiding codes of ethics in research and the professions. 2. Understand, discuss and apply ethical principles and codes across a range of disciplines and scenarios 3. Demonstrate awareness of current ethical issues and problems in relation to their own discipline and research area 4. Critically analyze and discuss scenarios cases of possible or actual ethical misconduct 5. Discuss how the guiding principles of ethics in research extend and apply to business, professional and personal codes of conduct and why this important to integrity and the well being of business, the professions and our community. 6. Show a fundamental understanding of the issues of copyright, plagiarism and proper citation, and be able to apply this in their own work.
Subject Synopsis/ Indicative Syllabus (Note 2)	 The need for ethics training and the meaning of ethical behavior in research: case studies, disasters and learning by the mistakes of others Philosophy and codes of ethics and their origins Culture, religion and the law – how these relate to ethical codes of conduct Obtaining ethical approval for a research project: procedures and processes Ethics in life science, humanities, education, business and industry: common issues, guiding principles, discipline specific scenarios Ethics and human behavior: individual, professional and societal responsibilities Recent ethical issues affecting Hong Kong and the society in general Ethical use of information in thesis writing: understanding copyright, plagiarism and proper citation

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

Pre-requisite /	None
Co-requisite/ Exclusion	
	The main chiestives of this series of response seminars/workshops are to
Objectives	 The main objectives of this series of research seminars/workshops are to provide an opportunity for our research students and research staff to present the latest results of their research achievement to their peers, bring together research students, research staff, and professors within AP department to exchange and share knowledge and experience on various aspects of scientific research, provide an in-depth analysis and study of specific research topics and update the knowledge of recent development in the related research communities, and to invite local and oversea research scientists/professors to present their recent advancement and/or to explain their view in the future development of research areas of excellent. Hence, this series of research students, research staff, academicians and experts to exchange and share knowledge and experience on various aspects of scientific research students, research staff, academicians and experts to exchange and share knowledge and experience on various aspects of scientific research students, research staff, academicians and experts to exchange and share knowledge and experience on various aspects of scientific research with the invited speakers, and improve our connection and visibility to the research communities.
Intended Learning	
Outcomes	 Upon completion of the research seminars /workshops, students will be able to: achieve instant critical thinking – analysis and evaluation of assumption, claims, evidence, and arguments during the short period of discussion as well as raise questions. improve information literacy – develop capability to distinguish different kinds of information sources, composing search strategies, and retrieving useful and relevant information. refill communication skill – demonstrate the capability in written and spoken (English as a medium) to present and discuss research information within the scientific community and society. establish networking – get to know researchers and scientists in their field of studies.
Subject Synopsis/ Indicative Syllabus	 Nanomaterials included 2D materials Photonic Materials and Devices Smart Materials and Devices Theoretical and Computational Physics

Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the seminar/workshop participation, the hottest and latest advancement research topics will be presented. This will lead to the students' further exploration of potential novel research directions and studies as well as stimulate the students' creative thinking.

Subject Code	AP605
Subject Title	Practicum
Credit Value	2
Level	6
Pre-requisite / Co-requisite/ Exclusion	All PhD students, irrespective of funding source and mode of study, must complete two training credits before graduation.
Objectives	The main objectives of departmental training are to
	• gain experience throughout the engagement in teaching/professional service supporting activities for 6 hours/week in any 13-week semester (for 1 credit), and
	• provide more teaching experience and training opportunity in order to widen the students' exposure for the development of their academic career.
Intended Learning Outcomes	Upon completion of the training, students will be able to:
Outcomes	 a) carry out independent teaching and/or professional service duties.
	b) improve communication skill and excel in teaching capability.
Subject Synopsis/ Indicative Syllabus	To be defined by the student's HoD/DoS or his/her delegate.
Teaching/Learning Methodology	Students who are required to undertake teaching supporting activities in their training credits will be required to complete a training programme organized by the EDC as required by the Department/School. Students who are required to interact directly with students in English as a part of their duties in supporting teaching and learning must demonstrate their language competence to fulfill the intended duties to the satisfaction of the host department. All eligible students except those who are native English speakers will also be required to successfully complete a language training programme offered by the ELC before taking up any teaching supporting activities.

Subject Code	AP616
Subject Title	Smart Materials and Structures
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in material science including
	• the fundamentals of smart materials, devices and electronics, in particular those related to the development of smart structures and products; and
	 the skills, knowledge and motivation in the design, analysis and manufacturing of smart structures and products, to research students from different disciplines.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) understand the physical principles underlying the behavior of smart materials;
	b) understand the engineering principles in smart sensor, actuator and transducer technologies;
	c) use principles of measurement, signal processing, drive and control techniques necessary to developing smart structures and products; and
	 appreciate and suggest improvement on the design, analysis, manufacturing and application issues involved in integrating smart materials and devices with signal processing and control capabilities to engineering smart structures and products.
Subject Synopsis/ Indicative Syllabus	 Overview of Smart Materials, Structures and Products Technologies Smart Materials (Physical Properties)
	Smart Sensor, Actuator and Transducer Technologies
	Measurement, Signal Processing, Drive and Control Techniques
	Design, Analysis, Manufacturing and Applications of Engineering Smart Structures and Products
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of material science and related topics, three experiments on piezoelectric, electrostrictive, magnetostrictive, magnetoelectric, magnetorheological fluid, electrorheological fluid, shape memory and fiber-optic sensor materials will be introduced in the studies. These proposed practical examples will demonstrate the importance of material science in our everyday life.

Carles of Carls	AP617
Subject Code	AP01/
Subject Title	Advanced Instrumentation for Materials Analysis
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in advanced instrumentation for materials analysis to research students from different disciplines.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) have an understanding on the principles and applications of a selected range of advanced instruments for materials analysis, b) understand the methodology of materials testing for quality assurance and failure analysis, and c) develop students' experimental skills through laboratory work experience.
Subject Synopsis/ Indicative Syllabus	 Overview of the principles and techniques in materials characterization and failure analysis; testing codes and standards. Non-destructive testing methods: dye penetration, magnetic particles inspection, eddy currents, ultrasonics and radiography. Mechanical and thermal techniques: dynamic mechanical analysis, thermomechanical analysis, and differential scanning calorimetry. Microscopy: TEM, SEM, AFM, SAM and SLAM. Other structural, chemical and surface analyses: XRD, FTIR, Raman spectroscopy, RHEED, RBS, EDX, LIMS and other novel techniques using plasma and post-ionization. Hands-on experiments of using some of the available advanced instruments/facilities in our research centers.
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of material science and related topics, hands-on experiments will be offered for students to gain experience on the characterization of the electrical and physical properties of some materials.

Subject Title	Science and Technology of Micro- and Nano- systems
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	To introduce knowledge in the field of micro- and nano- technologies to research students from different disciplines.
Intended Learning Outcomes	Upon completion of the subject, students will be able to:a) obtain a concept on the scope and recent development of the science and technology of micro- and nano-systems;b) gain the physical knowledge underlying the operation principles and
	 design of micro- and nano-systems; c) gain the technical knowledge required for computer-aided design, fabrication, analysis and characterization of nano-structured materials, micro- and nano-scale devices; d) learn some typical or potentially applicable micro- and nano-systems at the frontier of the development of the field;
	e) gain hands-on experience on characterization and fabrication of some micro- and nano-systems.
Subject Synopsis/ Indicative Syllabus	 Overview of the science and technology of micro- and nano-systems Physics in micro- and nano-systems: mechanics for micro- and nano-systems, fluid dynamics for micro- and nano- systems, heat conduction in micro- and nano- systems and quantum phenomena in nano-systems. Micro- and nano-fabrication principles and techniques: basic micro- and nano-fabrication techniques, MEMS fabrication techniques, packaging, measurement techniques and computer-aided design. Applications and devices : design of microaccelerometers and pressure sensors, microfluidic systems, biochemistry and medical applications, MEMS for information technology and nanoelectronics
Teaching/Learnin g Methodology	etc. In order to stimulate and motivate the students' interest in the study of material science and related topics, four experiments will be offered for the students to gain experience on nanoindentation, atomic force microscopy, carbon nanotube fabrication and operation of some MEMS devices. These proposed practical examples will demonstrate the

	importance of material	science in ou	ur evei	ryday l	ife.

Subject Code	AP619
Subject Title	Microfabrication Laboratory
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	To make the students familiar with the microfabrication concepts, materials and methods that are typically used in a cleanroom.
Intended Learning Outcomes Subject Synopsis/ Indicative Syllabus	 Upon completion of the subject, students will be able to: a) understand the basic knowledge of a cleanroom, the working procedures, and the safety aspects; b) understand the principles behind the design and fabrication of semiconductor devices and the effect of processes on their performance; c) have a thorough understanding of the available fabrication technologies; and d) experimentally carry out a simple process recipe using the most common microfabrication techniques. Physical principles of IC fabrication processes; Surface preparation; Thermal processes; Chemical and physical vapor depositions; Resist coating and removal; Mask fabrication and advanced lithography; Etching techniques;
	Process characterization;
Teaching/Learning Methodology	In order to stimulate and motivate the students' interest in the study of cleanroom microfabrication technologies, several cleanroom microfabrication experiments will be offered to the students for them to gain hands-on experience on the growth of SiO ₂ thin film by thermal oxidation, CVD, PVD, lithography, patterning and etching. These proposed practical examples will demonstrate the importance of microfabrication in the forefront of modern microelectronics.

Subject Code	AP620
Subject Title	Atomistic View of Matter: Modeling & Simulation
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This course will teach the physics that governs materials at the atomic scale and relate these processes to the macroscopic world.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) design, perform and analyze computer experiments using electronic and atomistic simulation techniques appropriate for the problem at hand; b) extract materials properties from the simulations; c) recognize the approximations and estimate the level of accuracy to be expected from each modeling technique, and d) critically read the current scientific literature on computational modeling and simulation of materials.
Subject Synopsis/ Indicative Syllabus	 The quantum mechanics of bonding: Atoms, molecules, molecular orbital theory, linear combination of atomic orbitals, variational principle Electronic structure calculations: Hartree, Hartree-Fock, post-Hartree-Fock, density functional theory and beyond, Koopmans theorem, modeling crystals Molecular dynamics simulations: Numerical integrators, neighbor list, spatial decomposition, interatomic potentials, parameterization, mean square displacement, auto-correlation, nudged elastic band Classical and statistical mechanics: thermodynamical ensembles, Boltzmann equation, equipartition energy, fluctuations, normal modes analysis, phonons, harmonic oscillator, specific heat, thermostats, barostats Advanced techniques: coarse grain simulations, atomistic electrochemistry, multi-scale modeling
Teaching/Learning Methodology	The course will make extensive use of cloud computing to enhance the learning using nanoHUB.org as well as its features for collaboration and publishing. Students will perform <i>ab initio</i> calculations using density functional theory and other advanced techniques as well as molecular dynamics simulations. Lecture : The concepts will be presented in class including some illustrative

	 examples and live simulations. Homework assignments will be provided periodically for the students to apply the concepts developed in class and to solve problems of current research. Computer laboratory: During laboratory sessions, students will perform atomistic simulations individually or in groups to gain a deeper understanding of topics related to the lectures. These sessions aim at developing the students' intuition and critical thinking upon discussion and exchange of ideas in order to engage in the proposed activities.

Subject Code	AP621
Subject Title	Advanced Electron Microscopy: Theory and Practice
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Nil.
Objectives	The aim of this subject is to introduce concepts of electron microscopy and develop the ability of students to use the electron microscopes for material characterizations.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) Understand the fundamental theory of electron optics b) Understand the working principles of transmission electron microscopy(TEM) and scanning electron microscopy(SEM) c) Identify the functions of analytical TEM d) Master the practical skills of TEM and SEM operations e) Select appropriate methods for particular purposes of real material characterizations
Subject Synopsis/ Indicative Syllabus	 Electron Optics: Fresnel diffraction; Fraunhofer diffraction; Fourier transform; Phase Contrast; Resolution; Aberration; Kinematic diffraction; Dynamical diffraction; Electron wave in crystals SEM: Secondary electron; Contrast; Resolution; Backscattered electron; EBSD; LEEM TEM: TEM compositions; Diffraction; Imaging; Spectroscopy Techniques for TEM and case study: HRTEM; SAED; CBED; Diffraction contrast; STEM; Lorentz Microscopy; Holography; EDS; EELS; in situ TEMs
Teaching/Learning Methodology	 Lecture: Basic theory and knowledge behind all experiments will be systematically introduced in lectures. Class work and assignments related to the content of lectures will be used to enhance students learning. Laboratory session: Experiments are essential for students to relate the concepts to practical applications and they are exposed to hand-on experience and proper use of equipment and also analytical skills on interpreting experimental results.

Subject Code	AP622
Subject Title	Emerging Memory Technologies
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Undergraduate-level courses about electronic circuits, solid-state physics and semiconductor physics are required, e.g., AP20012, AP30011 and AP40006
Objectives	The objective of this subject is to introduce concepts of the memory sub-system from the device cell structures to the array and architecture design with emphasis on the industry trend and cutting-edge technologies. The concept of memory hierarchy is used as an outline through the whole course. The in-memory computing and in- sensor computing for artificial intelligence will be also covered.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: (a) Understand the working principles of conventional charge-based memory technology (b) Understand the working principles of emerging non-charge-based memory technology (c) Understand the fundamentals of in-memory computing and in-sensor computing (d) Understand the working principles of cross-point memory array for artificial neural network (e) Experimentally carry out the micro-fabrication and characterization of emerging memory using the facilities inside cleanroom
Subject Synopsis/ Indicative Syllabus	 Charge-based memory technology: Static Random Access Memory, Dynamic Random Access Memory, Flash Memory, etc Non-charge-based memory technology: Resistive switching memory, phase-change memory, magnetic memory, etc In-memory computing and in-sensor computing: the principles of multiplication and accumulation Cross-point memory array for artificial neural network
Teaching/Learning Methodology	Lecture : Basic theory and knowledge will be systematically introduced in lectures. Class work and assignments related to the content of lectures will be used to enhance students learning.

Subject Title	Presentation Skills for Research Students
Credit Value	2
Level	6
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject is designed to improve research students' academic speaking proficiency, enhance their awareness of academic conventions during an academic discussion/presentation, and develop their skills in using clear, appropriate, persuasive and analytical language for their delivery of effective academic presentations.
Intended Learning Outcomes (Note 1)	 Upon completion of the subject, students will be able to: a. organise academic presentations logically by following academic conventions b. present research contribution by critically analysing previous research; c. use clear, appropriate, persuasive and analytic language for presentations at seminars, conferences and viva: and d. defend research logically, critically, and persuasively.
Subject Synopsis/ Indicative Syllabus	1. Critical analysis of prior research
(Note 2)	Understanding academic presentation process and the structure; identifying language features appropriate for academic speaking settings.
	2. Awareness of academic conventions
	Developing awareness of citation practices, and language use adopted in the related disciplines.
	3. Inter and intra section connections
	Using effective signpost language to organize and connect different parts of an academic presentation.
	4. Clear, appropriate, persuasive, and analytical language use
	Summarising, evaluating, and citing sources; describing and discussing research data; objectively evaluating research contribution.

Teaching/Learning Methodology (<i>Note 3</i>)	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input, class discussion both formally and informally, and presentations both individually and in groups. Elements of the flipped classroom are integrated in the subject delivering. Peer feedback, self- reflection and critique of student presentations are also an important part of the instructional scaffolding.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon subject completion. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

ELC6012
Thesis Writing for Research Students
3
6
ELC6011
This subject aims to improve research students' academic writing proficiency, enhance their understanding of the academic audience, develop their awareness of academic conventions, and develop their skills in using clear, appropriate, persuasive, and analytical language in thesis writing.
Upon completion of the subject, students will be able to present their research effectively in a thesis through:
 a. presenting the study clearly, appropriately and concisely in the Abstract; b. providing the Introduction analytically; c. reviewing the literature critically; d. analysing the appropriateness of the methodology used in the study; e. reporting and discussing the findings of the study; and f. discussing the significance of the study in the Conclusion.
To achieve the above outcomes, students are expected to use language, text structures, and cohesive devices appropriate to the academic audience, select and present information analytically, concisely and appropriately, examine and cite sources critically, and analyse the impact and significance of the research persuasively.
 Critical analysis of prior research Understanding research thesis writing process and the structure of a thesis; identifying language features of thesis writing. Awareness of academic conventions Developing awareness of citation practices, referencing format and language use adopted in the related disciplines. Inter and intra paragraphing connections Using effective cohesive devices to plan, organize and connect different parts of a research thesis.

	4. Clear, appropriate, persuasive and analytical language use							
	Summarising, evaluating and citing sources; describing and discussing research data; objectively evaluating research contribution; writing, revising, and proofreading written texts.							
Teaching/Learning Methodology (Note 3)	 The study method is primarily seminar-based. Activities include teacher input as well as individual and group work involving writing practice, evaluation of texts, mini-presentations and discussions. Practical work will involve analysing texts such as journal articles and research theses that are relevant to students' research areas. Students will be provided with opportunities to apply the language skills acquired to the preparation of their own thesis. Students will be referred to information on the Internet and the ELC's Centre for Independent Language Learning. Learning materials developed by the English Language Centre are used throughout this course. Additional reference materials will be recommended as required.

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

Subject Code	ENGL6016
Subject Title	Advanced Academic English for Research Students: Publishing and Presenting
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	The objective of the subject is to enable research postgraduate students to publish successfully in international journals and deliver effective conference presentations. This is achieved by equipping students with the essential English language skills and linguistic knowledge to effectively communicate the background, rationale, findings, and significance of their research. Students will be guided systematically to (1) improve their academic English; (2) acquire and apply knowledge of the generic and linguistic features of conference presentations and research articles; and (3) increase the persuasiveness of their spoken and written discourse. The primary focus will be on writing research articles.
Intended Learning Outcomes (Note 1)	 Upon completion of the subject, students will be able to: a. Be familiar with the differences between spoken and written academic English; b. Analyze and apply generic structures and linguistic features in research writing; c. Write research articles in clear, accurate and appropriate English; d. Prepare articles for publication in light of comments from editors and reviewers; e. Structure and deliver clear and persuasive presentations in English.
Subject Synopsis/ Indicative Syllabus (Note 2)	 Part 1 – Publishing in international journals: (2/3) Interacting with readers; Writing effective introductions and literature reviews; Describing research methods; Discussing the implications and significance of the findings; Drawing conclusions; Writing abstracts; and Addressing editors' and reviewers' comments. Part 2 – Delivering an effective conference presentation: (1/3) Structuring and delivering conference presentations in clear and appropriate academic English; Interacting with an audience and responding to questions.

Teaching/Learning Methodology (Note 3)	A learner-centered and highly interactive mode of teaching will be adopted. Students will engage in activities where they can share their experience and concerns, put forth their own thinking and comment or each other's research ideas, and critique each other's academic writings Students will be encouraged and guided to discover for themselves the various linguistic and generic features of successful presentations and academic writing through intellectually challenging tasks.						their ton ngs. the
