<b>Objectives</b>	<p>The subject aims to provide students with an overview of major psychological approaches to the explanation of normal human behaviors, and covers basic concepts of abnormality. It is aimed at developing students' insight about the uniqueness of individuals through understanding the principles governing human growth and behaviors and the interplay of heredity and environment in the developmental processes. Students are enabled to be sensitive to and appreciate the importance of applying the acquired psychological concepts in their daily lives, indigenous cultural context, and/ or professional practice.</p>														
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a. acquire an overview of major psychological approaches to the explanation of normal human behaviours;</li> <li>b. identify basic principles governing normal and abnormal human growth and development, and their relevance to the interplay of heredity and environment in the developmental processes;</li> <li>c. recognise philosophical assumptions of the different psychological theories about developmental and personality aspects of human nature;</li> <li>d. apply the acquired psychological concepts in daily lives and/ or relevant professional practice through developing insights and increasing sensitivity to the uniqueness of individuals and the environmental contexts.</li> </ol>														

<p><b>Subject Synopsis/ Indicative Syllabus</b></p>	<ol style="list-style-type: none"> <li>1. Introduction to the course <ol style="list-style-type: none"> <li>a) What is human behavior? Why do social workers study human behavior? How does human behavior relate to social work practice?</li> <li>b) Fundamental conceptual controversies <ol style="list-style-type: none"> <li>i) Nature versus Nurture</li> <li>ii) Changeability versus Stability</li> <li>iii) Universal versus Specific</li> </ol> </li> </ol> </li>   <li>2. Major Theories of Development <ol style="list-style-type: none"> <li>a) Psychosexual Perspective - Sigmund Freud</li> <li>b) Learning Theories – Classical Conditioning, Operant Conditioning, Social and Cognitive approaches to learning</li> <li>c) Humanistic Perspective - Abraham Maslow</li> <li>d) Psychosocial Perspective - Erik Erikson</li> <li>e) Cognitive Development - Jean Piaget</li> <li>f) Moral Development - Lawrence Kohlberg</li> <li>g) Ecological perspective</li> </ol> </li>   <li>3. Human Development from a Life-Span Perspective and Social Context <p>An Overview of the Characteristics of Bio-Psycho-Social Development at the Different Life Stages from Pre-natal to late adulthood.</p> <ul style="list-style-type: none"> <li>Pregnancy, birth, and the newborn</li> <li>Infancy</li> <li>Early childhood</li> <li>Middle childhood</li> <li>Adolescence and emerging adulthood</li> <li>Middle Adulthood</li> <li>Late Adulthood</li> </ul> </li> </ol>
<p><b>Teaching/ Learning Methodology</b></p>	<p>The learning approach is based on experiential learning in order to help students acquire a more personal understanding of the subject area. Experiential learning demands more of students’ reflective thinking, such as on their own developmental patterns and issues, which are indeed a resource base for analysis of theoretical constructs. Participatory learning is also emphasized, and students are encouraged to develop an open-minded attitude and build up confidence in intellectual discussion.</p> <p>Seminars are designed to maximize experiential learning. Ideas and concepts relevant to a life-span perspective to understand the systemic interaction of human behavior and environment are examined through assigning readings and journal articles for debates; using different perspectives to study human behaviors; discussing current psycho-social issues and so on.</p>

<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	Specific assessment methods/tasks	% weightin g	Intended subject learning outcomes to be assessed (Please tick as appropriate)

3. Individual Paper	10 %	✓	✓	✓	✓	
Total	100 %					
<p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>The quizzes enable students to consolidate theoretical knowledge/concepts in psychological approaches of understanding human behaviours, and familiarize students with the bio-psycho-social dimensions of developmental characteristics and social functioning of developmental stages.</p> <p>The seminar group presentation enables students to learn the process of examining a developmental topic in depth, with literature review, data collection and analysis, presentation involved, thus developing their abilities in critical thinking, team work, communication and problem solving. Relevant contents, clarity of discussion and effective presentation are valued.</p> <p>The individual paper helps students to apply the acquired psychological concepts in daily lives and/ or relevant professional practice through developing insights and increasing sensitivity to the uniqueness of individuals and the environmental contexts.</p>						
<b>Student Study Effort Expected</b>	Class contact:					
	▪ Lecture		27	Hrs.		
	▪ Seminar		12	Hrs.		
	Other student study effort:					
	▪ Self-Study		42	Hrs.		
	▪ Seminar Presentation		24	Hrs.		
	Total student study effort			105	Hrs.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.
