

BSE STUDENT STUDY TOUR SEOUL, SOUTH KOREA

A meaningful education goes far beyond learning in the classroom. In order to widen students' horizon and global perspective, the Department of Building Services Engineering had organized a study tour to Seoul in South Korea which is well known for its cutting edge technology as well as its smart and sustainable building design. Totally 53 students from the BEng programme joined the 7-day study tour which started off on 15 May 2018. Together with five academic/research staff, our students visited Yonsei University, which is one of three most prestigious universities in the country. They also had academic visits to notable green buildings like POSCO Green Building and Seoul Energy Dream Center, and revitalization development like the Seoulo 7017 and Seonyudo Park. All students had a good time in this meaningful and fruitful trip. As the old saying goes, there is no education quite like the lessons of travel.

Study Tour 2018

15 – 21 May

Co-organizer
University:
Yonsei University
