## **Subject Description Form**

Subject Code	ENG2002		
Subject Title	Computer Programming		
Credit Value	3		
Level	2		
Pre-requisite / Co- requisite / Exclusion	Nil		
Objectives	<ul> <li>To introduce the fundamental concepts of computer programming</li> <li>To equip students with solid skills in Python programming.</li> <li>To equip students with techniques for developing structured and object- oriented computer programs</li> <li>To demonstrate the techniques for implementing engineering applications using computer programs</li> </ul>		
Intended Learning Outcomes	<ul> <li>Upon completion of the subject, students will be able to:</li> <li>a. Familiarize themselves with at least one Python programming environment.</li> <li>b. Be proficient in using the basic constructs of Python to develop a computer program.</li> <li>c. Develop a structured and documented computer program.</li> <li>d. Understand the fundamentals of object-oriented programming and be able to apply it in computer program development.</li> <li>e. Apply computer programming techniques to solve practical engineering problems.</li> </ul>		
Contribution to Programme Outcomes (Refer to Part I Section 10)	<ul> <li>Programme Outcome 8: Demonstrate an ability to use the computer/IT tools relevant to the Biomedical Engineering (BME) discipline along with an understanding of their processes and limitations. (Teach and Practice)</li> </ul>		
Subject Synopsis/ Indicative Syllabus	<ol> <li>Syllabus:         <ol> <li>Introduction to Programming                 Components of a computer; Data representation in computers;                 Programming environment; Python IDE; Editing, saving, and running a                 script; Process of application development.</li>                 Bolts and Nuts of Python                 Data types; Variables and constants; Operators, expressions, and                 statements; Basic syntax; Functions and modules; Scope of variables;                 Python modules; Absolute and relative import.</ol></li> </ol>		

	3. Program Flow Control and Functions					
	Branching and looping; Iterators; Unicode; Python functions; static functions; Lambda function; Position arguments and default arguments; args and kwargs; Interface with command line; argparse					
	4. Program Design and Debugging					
	Structured program design; Testing and debugging a program; Exception and assertion.					
	5. Strings and File I/O					
	String encoding format; F-string; String operations; String and number conversion; File and directory manipulations; The "os", "sys", and "shutil" modules; Reading/writing text and numbers from/to a file.					
	6. Tuples, Lists, Dictionaries, and Sets					
	Basic tuple and list operations; Searching and sorting lists; Dictionary literals; Basic dictionary operations; Built-in tuple/list/dictionary/set methods and functions; Use of enumerate and zip					
	7. Basic Object-Oriented Programming					
	Objects and classes; Attributes and methods; Inheritance and polymorphism; Special methods and operator overloading.					
	8. Data Analytics with	th Python Li	ibraries			
	Introduction to NumPy, Pandas, and Matplotlib; NumPy arrays, built-in methods, and mathematical operations; Reading/writing data files using Pandas; Pandas operations and functions; Data visualization with Matplotlib					
	_					
Teaching and Learning Methodology	Teaching and Learning Method	Intended Subject Learning Outcome	Remarks			
Learning	e	Subject Learning	Remarks Students are introduced to the knowledge of computer programming through explanation and illustrative examples. Comprehension of the knowledge is strengthened with short quizzes. Students will be able to monitor the skills of using Python and apply the techniques of developing structured object-oriented applications.			

	Assignment, tests and final examination	1,2,3	3,4,5	develop comprehe taught. Th applicatio solve pro design sol alternative problem-s programm regularly. understand concepts,	a firm nsion ney wi ns an oblems dutions es. To solving ning en ning en ning en ning a	ling of fundamental					
Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks		% weighting		Intended subject learning outcomes to be assessed (Please tick as appropriate)						
					a	b	c	d	e		
	1. In-class exercises a homework	ind		10%	$\checkmark$						
	2. Short-quizzes			10%		$\checkmark$	$\checkmark$				
	3. Programming tests			30%	$\checkmark$	$\checkmark$	$\checkmark$		$\checkmark$		
	4. Assignment			20%	$\checkmark$	$\checkmark$	$\checkmark$		$\checkmark$		
	5. Final examination			30%		$\checkmark$	$\checkmark$		$\checkmark$		
	Total			100%							
	<ul> <li>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</li> <li>The short-quizzes are for assessing the understanding of fundamental concepts. The in-class exercises and homework are conducted to help students familiarized with the programming language and skills. The programming tests are for assessing the ability of students on solving computer problems through programming within a specified period. Through doing assignments, students will be able to experience how to solve engineering problems and design solutions by using a systematic approach. The final examination is for assessing the students' ability on using the programming language and analysing computer programs.</li> </ul>						nental b help . The olving beriod. ow to ematic				

Student Study	Class contact:				
Effort Expected	<ul> <li>Lectures, Tests and Quizzes</li> </ul>	26 Hrs.			
	Laboratory / Tutorial	13 Hrs.			
	Other student study effort:				
	<ul> <li>Self-study</li> </ul>	57 Hrs.			
	Homework	12 Hrs.			
	Total student study effort	108 Hrs.
