

### Subject Description Form

<b>Subject Code</b>	BME32138
<b>Subject Title</b>	<b>Cellular Engineering</b>
<b>Credit Value</b>	3
<b>Level</b>	3
<b>Prerequisite</b>	Human Biology I & II for Biomedical Engineering (ABCT2331 & ABCT2332) or equivalent subjects
<b>Objectives</b>	<ol style="list-style-type: none"> <li>1. Deliver knowledge in the fundamentals of cell biology with particular emphasis on cellular physiological and pathological processes.</li> <li>2. Introduce the principles of engineering methods/technologies applied in cellular/molecular biology and biomedical sciences.</li> <li>3. Prepare undergraduate students with basic concepts and skills for biomedical research using cellular engineering approaches.</li> </ol>
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a. Understand the fundamental concepts in cellular/molecular biology and significances of cellular engineering in biomedical research and applications.</li> <li>b. Comprehend the principles of technologies in cellular engineering.</li> <li>c. Design experiments with cellular engineering methods to solve basic scientific questions in cell biology and biomedical sciences.</li> </ol>
<b>Contribution to Programme Outcomes (Refer to Part I Section 10)</b>	<ul style="list-style-type: none"> <li>▪ Programme Outcome 1: Demonstrate an ability to apply knowledge of mathematics, science, and engineering appropriate to the Biomedical Engineering (BME) discipline. (Teach, Practice, and Measure)</li> <li>▪ Programme Outcome 2: Demonstrate an ability to design and conduct BME experiments, as well as to analyze and interpret data. (Practice and Measure)</li> <li>▪ Programme Outcome 4: Demonstrate an ability to identify, formulate, and solve BME problems. (Teach, Practice, and Measure)</li> <li>▪ Programme Outcome 6: Demonstrate an ability to critically evaluate research and professional literature, and understand the principles and practice of conducting research in clinical and industrial environments relevant to BME. (Practice and Measure)</li> </ul>
<b>Subject Synopsis/ Indicative Syllabus</b>	<b>Conceptual:</b> Overview of cellular engineering in cell biology and biomedical sciences; Cell structure and subcellular organelles; Genetics and epigenetics of the cell; Protein synthesis/trafficking/maturation; Cell cycle and growth; Cell mechanics and cytoskeletal dynamics (e.g. cell stiffness and cellular contractility); Cell-cell and cell-extracellular

	<p>environment (e.g. matrix) interactions; Cellular and intercellular signal transduction and networks; Mechanotransduction; Cells in development (stem cells), ageing (cell senescence) and diseases; Cellular engineering in regenerative medicine.</p> <p><b>Technological:</b> Cell culture technology; Cellular genetic engineering, Measurements of cell growth and death; Gene expression assessments; Cellular imaging; Live-cell function and activity assessments; Molecular and cellular tracking (e.g. genetic lineage tracking, bioluminescence); Cell manipulation technology (e.g. Dielectrophoresis trap, Surface acoustic waves and magnetic trapping); Cell positioning technology (e.g. Micro-contact printing and microfluidic patterning); Technologies for cell mechanics measurement (e.g. Optical tweezers, Atomic force microscopy, and Magnetic twisting cytometry); Technologies for cellular traction measurement (e.g. Traction force microscope and Micropost array).</p>																																																											
<p><b>Teaching and Learning Methodology</b></p>	<p><b>Lectures/Seminar:</b> the major concepts and principles in cellular engineering will be delivered through lectures and invited seminars.</p> <p><b>Students presentation/Journal club/Group discussion:</b> students will be assigned to read, present and discuss recent research papers to gain knowledge in the latest advances and developments in cellular engineering.</p> <p><b>Laboratory tutorials:</b> students will be grouped to observe and learn the laboratory techniques in cellular engineering.</p>																																																											
<p><b>Assessment Methods in Alignment with Intended Learning Outcomes</b></p>	<table border="1" data-bbox="488 1178 1390 1633"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weight ing</th> <th colspan="8">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th></th> <th></th> <th></th> <th></th> <th></th> </tr> </thead> <tbody> <tr> <td>Assignments and presentations</td> <td>30 %</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Mid-term quiz</td> <td>30 %</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Final examination</td> <td>40 %</td> <td>√</td> <td>√</td> <td>√</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Total</td> <td>100 %</td> <td colspan="8"></td> </tr> </tbody> </table> <p><i>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</i></p>		Specific assessment methods/tasks	% weight ing	Intended subject learning outcomes to be assessed (Please tick as appropriate)								a	b	c						Assignments and presentations	30 %	√	√	√						Mid-term quiz	30 %	√	√	√						Final examination	40 %	√	√	√						Total	100 %
