

Subject Description Form

Subject Code	BME5126																						
Subject Title	Clinical Biomechanics																						
Credit Value	3																						
Level	5																						
Responsible staff & Department/School	Prof Ming ZHANG (BME)																						
Pre-requisite / Co-requisite/ Exclusion	Nil																						
Objectives	To apply the biomechanics to understand the normal functions of musculoskeletal system and pathomechanics of common musculoskeletal disorders, and to develop ways and means to recover lost function of musculoskeletal system.																						
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Demonstrate understanding the nature, structure & regulating mechanism of musculoskeletal system b. Apply biomechanical concept to appreciate and analyze the pathomechanics of common musculoskeletal disorders. c. Develop way and means to recover lost function of musculoskeletal system for quality of life improvement 																						
Subject Synopsis/ Indicative Syllabus	Various clinically relevant musculoskeletal disorders, such as low back disorder, neck pain, foot disorder, pressure ulcer and bone fracture, will be used as examples to illustrate the application of biomechanical principles for understanding the normal functions of the musculoskeletal system, investigating possible causes of the disorders, evaluating the level of severity as well as devising possible treatments for the disorders. Biomechanics of the disorders will be appreciated at the tissue, organ and system levels.																						
Teaching/Learning Methodology	<p>There will be lectures and tutorials dealing with fundamental mechanics, pathomechanics and application examples on human musculoskeletal system. Students will be required to read widely and in specific areas. A review report is required in a specific area.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2" style="width: 30%;">Teaching/learning methodology</th> <th colspan="4">Intended subject learning outcomes</th> </tr> <tr> <th style="width: 10%;">a</th> <th style="width: 10%;">b</th> <th style="width: 10%;">c</th> <th style="width: 10%;"></th> </tr> </thead> <tbody> <tr> <td>1. Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed				
			a	b	c		
	1. Continuous assessment (including assignments, working sheet, class quiz, and writing report)	100%	√	√	√		
	Total	100 %					
Note: Assignments, working sheet and class quiz will assess outcome 1 and 2; The writing report will assess the outcome 3.							
Student Study Effort Expected	Class contact:						
	▪ Lecture		36 Hrs.				
	▪ Tutorial		3 Hrs.				
	Other student study effort:						
	▪ Self-study		53Hrs.				
	▪ Assignment and paperpreparation		50 Hrs.				
	Total student study effort		142 Hrs.
