

### **Subject Description Form**

<b>Subject Code</b>	BME5155
<b>Subject Title</b>	Research Methods & Biostatistics
<b>Credit Value</b>	3
<b>Level</b>	5
<b>Responsible staff &amp; Department/School</b>	Dr. Chunyi WEN (BME)
<b>Pre-requisite / Co-requisite/ Exclusion</b>	Nil
<b>Objectives</b>	The objective of this subject is to prepare the students to be able to plan a piece of meaningful, independent research, using appropriate design and methods, incorporating ethically acceptable behaviour and adhering to accepted ethical principles, and using appropriate statistical analysis and methods of presentation of findings for the type and amount of data, the purpose of the research and the targeted audience or vehicle for communication of findings.
<b>Intended Learning Outcomes (ILOs)</b>	Upon completion of the subject, students will be able to: <ul style="list-style-type: none"><li>a. Demonstrate understanding of the importance of planning and information gathering in research and demonstrate good planning and information gathering skills</li><li>b. Use a range of information gathering approaches appropriately</li><li>c. Demonstrate the ability to critically and comprehensively review the scientific literature on a given topic</li><li>d. Develop different type of research approaches that are used in health sciences</li><li>e. Perform power calculations and demonstrate understanding of type I and type II errors and the meaning of one-tail and two-tail p values in planning, performing and evaluating statistical analyses of research data</li><li>f. Select and use the appropriate statistical tool(s) and presentation method(s) for a given set of research data and purpose</li><li>g. Demonstrate understanding of the key elements of a research proposal</li><li>h. Evaluate and summarize given research data/findings</li><li>i. Demonstrate knowledge, understanding and application of accepted ethical principles in research involving human subjects or animals</li><li>j. Prepare a detailed research proposal incorporating background, literature review, aims, methods, data analysis and importance of a research project of a selected topic in health science &amp; technology.</li></ul>

<p><b>Subject Synopsis/ Indicative Syllabus</b></p>	<p>APPROACHES &amp; DESIGN. Different types of research &amp; research data; different approaches to research in health sciences; qualitative and quantitative research; observational, cross-sectional, case-control, nested case control, prospective, intervention studies – which is right for you? Issues of blinding, power, purpose and outcome.</p> <p>ETHICAL ISSUES. Ethical principles and approval procedures: what are you doing, why and to whom or what? risk/benefit analysis.</p> <p>VALIDITY, FEASIBILITY AND VALUE. Could and should it be done? How should it be done? Issues &amp; case studies in healthcare and health sciences research ethics.</p> <p>KEY TERMS AND CONCEPTS for planning for data collection &amp; analysis – types of data; power, significance and error; sample size.</p> <p>FOCUSING ON THE PROBLEM. Formulating hypotheses, identifying the problem and asking questions; non-hypothesis driven research; importance of literature searching and critical analysis of published literature; sources of information; avoiding plagiarism; more on power and error and sample size. Main elements of a research proposal; reviewing the literature; outcomes and significance of findings</p> <p>PLANNING AND PERFORMING STATISTICAL ANALYSIS; fitting the data, the question and the analysis together; interpreting P values – what they mean and what they do not mean; one sided or two sided P? sample size calculations; summary statistics. Which tests and why? Type I and Type II errors; identifying and handling skewed data; parametric and non-parametric tests; correlations and differences ; one-sided and two sided analysis; odds ratios; relative risk; comparing groups and methods; Analysis of sample datasets/demo of statistical analysis software</p> <p>GETTING THE MESSAGE ACROSS: tables and figures; line graphs, scatter plots, box charts, pie charts and columns; error bars. Are the data valid? What do they mean? Reaching the appropriate conclusion; How and when to report data? Monitoring progress; Preparing for write up and presenting research findings</p> <p>ABSTRACTS, POSTERS &amp; PAPERS. Identifying and presenting an overview of the work and the key findings; elements of a scientific paper, choosing a journal; styles, ranking, impact factor; formatting, referencing and acknowledgements; clarity and focus; separating speculation, opinion and fact.</p> <p>CRITICAL ANALYSIS. Reviewing and critiquing data, proposals and papers.</p>																																																																	
<p><b>Teaching/Learning Methodology</b></p>	<p>Lecture, group discussion, guided reading, case studies</p> <table border="1" data-bbox="505 1388 1425 1759"> <thead> <tr> <th rowspan="2">Teaching/learning methodology</th> <th colspan="10">Intended subject learning outcomes</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> <th>g</th> <th>h</th> <th>i</th> <th>j</th> </tr> </thead> <tbody> <tr> <td>1. Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed									
			a	b	c	d	e	f	g	h	i	j
	1.Proposal writing assignment	35%	√	√	√	√		√	√	√	√	√
	2.Information gathering/critique	35%	√	√	√		√		√	√	√	
	3.Data analysis	30%					√	√		√		
	Total	100 %										
<p>Students are required to integrate the knowledge acquired in the classes in their proposal writing assignment. The information gathering/critique assignment is used to assess whether students are able to conduct independent literature search and paper critique. A data analysis test is used to assess students' knowledge in biostatistics.</p>												
Student Study Effort Expected	Class Contact:											
	<ul style="list-style-type: none"> <li>▪ In class (lecture/ group discussion / workshop / case studies)</li> </ul>											39 Hrs.
	Other student study effort:											
	<ul style="list-style-type: none"> <li>▪ Self-study, guided reading, preparing assignments</li> </ul>											103Hrs.
	Total student study effort											142 Hrs.
