

## Subject Description Form

<b>Subject Code</b>	BME2S03
<b>Subject Title</b>	Reducing the Scientific Divide in Secondary Students through STEM (Science, Technology, Engineering and Mathematics) Projects
<b>Credit Value</b>	3
<b>Level</b>	2
<b>Pre-requisite / Co-requisite / Exclusion</b>	Nil
<b>Objectives</b>	<p>The objectives of this subject are to:</p> <ol style="list-style-type: none"><li>a. Introduce to students the concept and practice of service learning.</li><li>b. Raise students' awareness of the difficulties and challenges faced by children and teenagers studying in underprivileged schools.</li><li>c. Develop students' scientific thinking and scientific literacy.</li><li>d. Educate students about the impact of scientific thinking and literacy on young people and the general community.</li><li>e. Enhance students' generic competencies of innovative problem solving, communication and teamwork.</li><li>f. Nurture students' sense of social awareness, responsibility and engagement.</li></ol>
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"><li>a. Link their service learning activities and experience with the academic content of the subject.</li><li>b. Articulate and empathize with the difficulties and challenges faced by children and teenagers studying in underprivileged schools.</li><li>c. Apply basic scientific thinking principles to teach and demonstrate STEM concepts in the service setting.</li><li>d. Understand the impact of scientific literacy on young people and the community.</li><li>e. Work effectively in multidisciplinary teams to solve problems encountered in planning and delivering the service.</li><li>f. Communicate effectively with clients and/or other stakeholders.</li><li>g. Reflect on their role and responsibilities both as a professional in their chosen discipline and/or as a responsible citizen.</li></ol>

<p><b>Subject Synopsis / Indicative Syllabus</b></p>	<p>The topics in the course syllabus cover three major areas:</p> <p><b><u>1. Concept and Practice of Service Learning</u></b></p> <ul style="list-style-type: none"> <li>▪ Principles, concepts and myths of service learning.</li> <li>▪ Benefits of service learning to students, the university and the community.</li> <li>▪ Ethical issues in service learning.</li> <li>▪ Basic concepts and theories of social problems, developments and justice.</li> <li>▪ Social responsibilities of global citizens as intellectuals and professionals.</li> <li>▪ Proper attitudes and behaviors in service delivery.</li> <li>▪ Developing a service project proposal/plan.</li> <li>▪ Effective team work and problem solving skills in service-learning projects.</li> <li>▪ Reflection as a tool for learning.</li> </ul> <p><b><u>2. Discipline-Specific Concepts, Issues and Skills</u></b></p> <ul style="list-style-type: none"> <li>▪ Principles and concepts of scientific literacy and thinking.</li> <li>▪ Scientific methods and inquiry; formulation, hypothesis, prediction and experiment; applications of scientific thinking to everyday experience.</li> <li>▪ Impact of scientific literacy on society; fear of science; pseudoscience versus proto-science.</li> </ul> <p><b><u>3. Project-Specific Concepts, Issues and Skills</u></b></p> <ul style="list-style-type: none"> <li>▪ Concepts and practices in teaching and demonstrating scientific concepts, including teaching methods; Bloom’s taxonomy; classroom management; communication to large groups.</li> <li>▪ Financial, cultural and socioeconomic challenges faced by children in underprivileged schools and communities.</li> <li>▪ Moral and ethical concerns related to working with children and young people in a school setting.</li> </ul>
<p><b>Teaching / Learning Methodology</b></p>	<p><b><u>1. e-Learning Module (10 hours)</u></b></p> <p>The e-learning module is developed and delivered by the Office of Service Learning at PolyU, consisting of readings, exercises and assessments that are designed to introduce students to the basic concept and practice of service learning.</p> <p>Students are required to successfully complete the e-learning module <u>within the first four weeks</u> of the semester in which they are taking the subject.</p>

## **2. Discipline-Specific Lectures and Seminars (4 hours)**

These lectures and seminars will be designed and conducted by the subject team. They are designed to educate students on methods of scientific thinking and inquiry and the impact of scientific literacy on society.

## **3. Project-Specific Lectures and seminars (4 hours)**

These lectures and seminars will be designed and conducted by the subject team or other experts and speakers (e.g. Office of Service Learning, NGOs, school teachers). They are designed to

- a. Develop students' understanding of the background and challenges faced by students at these underprivileged schools, and
- b. Provide training for students in ethical knowledge and teaching/classroom management skills for planning and delivering the service project.

## **4. Project-Specific Tutorials and/or Workshops (6 hours)**

The project-specific tutorials and/or workshops on "Scientific Thinking and Experiment in a Nutshell" will be designed and conducted by the teaching team. They are designed to

- a. Refresh students on the various STEM methods and theories that they will encounter in the service project, and
- b. To give training to students in the skills and knowledge needed to create the necessary materials for the service project. Students are required to spend 20 hours in preparing proposals/plans for the service project. Students are required to attend all of the lectures, seminars and all relevant workshops and successfully complete all of the required assignments/learning tasks prior to participation in the service learning project.

## **5. Service Learning Projects**

The service learning projects will be organized in conjunction with the Office of Service Learning. Students will work in interdisciplinary teams and be attached to resource-poor secondary schools with large proportions of underprivileged students. For example, these schools may include large proportions of new immigrants, ethnic minorities, or at-risk youths.

The focus of the projects will be on reducing the scientific divide in secondary students through teaching and learning STEM (science, technology, engineering and mathematics) concepts and theories while cultivating a spirit of scientific literacy and thinking. Example service learning projects include designing projects to illustrate key STEM concepts to schoolchildren; designing worksheets to help the children practice STEM concepts; assisting children with STEM subjects; organizing STEM awareness workshops and activities for children, etc. The exact nature of the project will vary depending on the needs of the school that the students are serving. The service project will take place mainly at the collaborating secondary schools. The exact time will vary

depending on the school to which the students are attached. Some project activities may be held on weekends.

Students are expected to spend about 20 hours in preparing the STEM worksheets. In all cases, students will be required to spend the 40 required hours of service learning in direct interaction with the children and their teachers.

**6. Reflective Journals & Report and Review Sessions**

Students will be required to write two reflective journals during the project. The purpose of these reports are to

- Document their work,
- Reflect upon their service learning experiences,
- Identify their learning gains and their weaknesses, and also to
- Propose areas of change for future sessions.

Post-service, students will be required to write a final individual summative report and to produce a team reflective presentation video. The report and presentation will require students to demonstrate their ability to:

- Link their service learning experiences with the academic focus/discipline specific content of the subject,
- Reflect on their service learning experience to identify their learning gains as well as areas for future improvements,
- Reflect on their roles and social responsibilities.

To guide students in using reflection as a tool for learning, and to assess their ability in achieving the above learning objectives, reflection and review sessions will also be held both during and after the service learning project. Experts and facilitators from outside the subject team (e.g. Office of Service Learning, NGOs, school teachers) may be invited to contribute to some of these sessions as appropriate.

**Assessment Methods in Alignment with Intended Learning Outcomes**

Students’ performance in this subject will be assessed using a letter-grading system in accordance with the University’s convention from grade F (failure) to A+. The relative weighting of the different assessment components are as follows:

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						
		a	b	c	d	e	f	g
e-Learning Module and Project-specific seminars and workshops	Pass/Fail	√	√					√

Plans/ proposals for service	30%			√		√	√	
Performance in rendering service	35%		√	√		√	√	
Reflective journals/report/ presentation	35%	√	√		√			√
Total	100%							

Students must obtain a pass in all of the components in order to pass the subject.

*Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:*

The e-Learning Module and Project-specific seminars and workshops will include assignments and learning tasks that are designed to assess students' ability to link service learning with the academic content of the subject (ILO a), their understanding and empathy for the underprivileged community (ILO b) as well as their understanding of their role and responsibilities in society (ILO g).

Students will be asked to write proposals/plans for the service projects as preparation for service. These proposals and plans may include project designs, sample project deliverables, lesson plans, worksheets, model answers, etc. These will clearly require students to demonstrate their understanding of the relevant STEM concepts, as well as their ability to apply their grasp of scientific knowledge and scientific literacy. (ILO c). They will be working in interdisciplinary teams and be required to demonstrate their ability to work collaboratively (ILO e) and communicate with invited speakers such as school teachers (ILO f).

During the execution of the project, students will be working in teams at underprivileged schools. This will expose them to the issues and challenges faced by teachers and students at these schools (ILO b). They will have to be able to communicate effectively with the students and the teachers (ILO f) and to empathize with their situation (ILO b). Since students will be working in teams to demonstrate STME concepts (ILO c), this will also require them to demonstrate their ability to work collaboratively to apply their knowledge and skills to deal with real problems in the service setting (ILO e).

Students will be supervised throughout the service component either by members of the teaching team, or by staff of the Office of Service Learning. They will be assessed by their attitude and performance in the rendering of service, their degree of engagement with the secondary students and their teachers, their collaboration with other fellow students, and interactions with the service recipients and the collaborating school.

	Students' reflective journals and report, and their presentations and discussions during the reflection and review sessions and tutorials, will testify to the students' <u>reflection</u> on their learning experience, and the breadth and depth of their learning. This assesses their ability to link service learning and the academic content of the subject (ILO a), their ability to reflect upon the impact of scientific literacy on the community (ILO d), their understanding of and empathy for the challenges faced by the children that they serve (ILO b), and their ability to reflect on their role and responsibilities in the society (ILO g).	
<b>Student Study Effort Expected</b>	e-Learning Module	10 Hrs.
	Class contact:	
	▪ Discipline-related Lectures, Tutorials and Seminars	4 Hrs.
	▪ Project-Specific Seminars, Tutorials and/or Workshops	10 Hrs.
	Other student study effort:	
	▪ Readings, self-study, and planning and preparation for the service project	40 Hrs.
	▪ Direct rendering of service, including meeting with school teachers	40 Hrs.
	▪ Reflection and review	31 Hrs.
	Total student study effort	135 Hrs.
