

## Subject Description Form

<b>Subject Code</b>	BRE462
<b>Subject Title</b>	Advanced Construction Technology
<b>Credit Value</b>	3
<b>Level</b>	4
<b>Pre-requisite</b>	BRE361 or BRE370
<b>Objectives</b>	<ol style="list-style-type: none"> <li>1. Introduce and discuss selected topics on advanced construction technology in building construction</li> <li>2. Foster guided learning and critical investigation on the cutting edge technologies in building construction</li> <li>3. Appreciate the future trends, difficulties and challenges in the construction of tall buildings</li> </ol>
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a) grasp the selected construction technologies and conduct preliminary analysis on their application scenarios; keep students abreast with the up-to-date technologies in tall buildings construction;</li> <li>b) compare alternative solutions in building construction technologies (contemporary versus conventional; sustainable versus Non-sustainable; automated versus manual);</li> <li>c) further enhance their communication skills through drawings, oral and written presentation in a team environment;</li> <li>d) foster their life-long learning through independent thinking, self-study and critical reviews, in-depth investigations on some construction planning and management issues.</li> </ol>
<b>Subject Synopsis/ Indicative Syllabus</b>	<ol style="list-style-type: none"> <li>1. High performance concrete including high strength concrete, self-compacting concrete and concrete for 3D printing.</li> <li>2. Demolition: Code of Practice and Building Regulations for demolition works.</li> <li>3. Advanced Construction Technology, including Very Tall Building Construction, Modular Integrated Construction and construction 3D-printing.</li> <li>4. Site layout planning: Basic principles in site layout planning, with due consideration to access, storage, accommodations, services, plants, health and safety, and related statutory requirements.</li> <li>5. Visualization, sensing and tracking applications in construction process monitoring and management control.</li> <li>6. Alternation and Addition Works (A &amp; A works): Structural &amp; Condition survey / appraisal, conversion, preservation, fulfillment of statutory requirements, project management for A &amp; A works.</li> </ol>

**Teaching/Learning Methodology**

**Lectures**  
 Lectures are designed to help the students gain basic knowledge and understanding on each selected topic.

**Case studies: In-class reading and discussions**  
 Case studies on each topic are intended to illustrate the theories and regulatory requirements. Reading materials are provided for in-class reading and discussions in the tutorial session. In case study, representative construction technologies used for buildings / projects in Hong Kong and other metropolitan areas will be highlighted. Guest speakers may be invited if appropriate.

**Group Projects**  
 There are three group projects on different focuses;  
 1) a presentation on topics about project case study or advanced construction technology  
 2) a report on site layout planning study or alternation and addition works  
 3) an essay report on topics about Digital Construction

**Written Examination**  
 Written examination is employed to assess student on problem solving skills individually. Questions for the examination are usually designed as case-based and/or problem-based.

**Assessment Methods in Alignment with Intended Learning Outcomes**

Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
		a	b	c	d		
1. Group Project 1 (Tutorial Task & Presentation)	20%	√	√	√	√		
2. Group Project 2 (Site Planning)	20%	√	√	√	√		
3. Group Project 3 (Essay on Digital Construction)	20%	√	√		√		
4. Examination	40%	√	√		√		
Total	100%						

Students must pass both the continuous assessment elements and the end-of-semester examination in order to pass the subject.

Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:  
 Group projects will require students to have good understandings on related construction technologies. Extensive reading and/or critical review are required. Project report will require the students to demonstrate their collective work as a team with contributions from each team member through effective communications.

Written examination is used to demonstrate students' ability in analyzing issues and problems and to suggest solutions on an individual basis.

<b>Student Study Effort Required</b>	Class contact:	
	▪ Lecture	26 Hrs.
	▪ Tutorial	13 Hrs.
	Other student study effort:	
	▪ Reading and writing assignments	40 Hrs.
	▪ Group project	40 Hrs.
	Total student study effort	119 Hrs.
