

Engineering Mechanics Institute Conference (EMI) at The Massachusetts Institute of Technology (MIT), USA

On 29 May to 1 June 2018, Dr. You-Wu Wang, Mr. Qiu-Hu Zhang and Mr. Si-Qi Ding attended the Engineering Mechanics Institute (EMI) Conference at Boston, USA. The EMI conference is created by ASCE, aiming at disseminating the most recent progress in engineering Mechanics as the core discipline of science-enabled Civil Engineering understood in the broadest sense. The EMI 2018 conference was organized by the Massachusetts Institute of Technology in Cambridge. Up to 900 scholars around the world have attended this conference. At the conference, Dr. You-Wu Wang delivered a presentation on “Automated Damage Detection for High-Speed Train Wheels Based on Bayesian Dynamic Linear Model”, Mr. Qiu-Hu Zhang delivered a presentation on “Bayesian spectrum approach for wheel flat identification” and Mr. Si-Qi Ding delivered a presentation on “Self-sensing cementitious composites incorporated with hierarchical composite of carbon nanotube grown on carbon fiber”.
