

## Seminar on “A Quest toward a True Intelligent Civil Infrastructure”

On 24 January 2018, Professor Jianchun Li, Professor of Structural Dynamics and the Director of the Centre for Built Infrastructure Research from University of Technology, Sydney (UTS) paid a visit to CNERC-Rail and delivered a seminar on “A Quest toward a True Intelligent Civil Infrastructure”. Prof. Jian-Chun Li and his team started their research and development on smart materials/structure since 2000. With many active researchers and key experimental facilities, featuring high-energy programmable shake table, their research in this area has yielded fruitful outcomes. In the seminar, Prof. Jian-Chun Li shared with audience his recent research and development at UTS on smart structure field, and discussed the issues related to challenges and future opportunities toward resilient intelligent structure.
