

## Subject Description Form

<b>Subject Code</b>	COMP1002			
<b>Subject Title</b>	Computational Thinking and Problem Solving			
<b>Credit Value</b>	4			
<b>Level</b>	1			
<b>Pre-requisite / Co-requisite / Exclusion</b>	Nil			
<b>Objectives</b>	<p>The objectives of this subject are to:</p> <ol style="list-style-type: none"> <li>1. equip students with no prior experience on computer programming with fundamental computational and skills. In particular, the students will learn how to abstract and solve problems, and how to implement them in a high-level programming language; and</li> <li>2. enable students to be competent lifelong problem solvers.</li> </ol>			
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <p><u>Professional/academic knowledge and skills:</u></p> <ol style="list-style-type: none"> <li>(a) show a basic understanding of concepts of computational thinking;</li> <li>(b) understand the nature and characteristics of real-life problems and model them as computational problems;</li> <li>(c) develop computer solutions to basic and standard problems and implement them using a high-level programming language, e.g. Python;</li> <li>(d) acquire some specialised programming skills to implement solutions using suitable data types and constructs; and</li> <li>(e) recognise the properties of a competent problem solver and self-learner.</li> </ol>			
<b>Subject Synopsis/ Indicative Syllabus</b>	<table border="1" style="width: 100%;"> <thead> <tr> <th style="text-align: left;"><b>Topic</b></th> </tr> </thead> <tbody> <tr> <td> <p><b>1. Introduction to Computational Thinking</b></p> <p>Formulating problems for computers to solve them; logically organizing and analysing data; representing data through abstractions; automating solutions through algorithmic thinking; implementing efficient solutions; generalizing the problem-solving process.</p> </td> </tr> <tr> <td> <p><b>2. Problem Solving through a High-level Programming Language</b></p> <p>Computing with numbers and strings; lists and files; functions; decision structures; loop structures and Booleans; sets and dictionaries.</p> </td> </tr> </tbody> </table>	<b>Topic</b>	<p><b>1. Introduction to Computational Thinking</b></p> <p>Formulating problems for computers to solve them; logically organizing and analysing data; representing data through abstractions; automating solutions through algorithmic thinking; implementing efficient solutions; generalizing the problem-solving process.</p>	<p><b>2. Problem Solving through a High-level Programming Language</b></p> <p>Computing with numbers and strings; lists and files; functions; decision structures; loop structures and Booleans; sets and dictionaries.</p>
<b>Topic</b>				
<p><b>1. Introduction to Computational Thinking</b></p> <p>Formulating problems for computers to solve them; logically organizing and analysing data; representing data through abstractions; automating solutions through algorithmic thinking; implementing efficient solutions; generalizing the problem-solving process.</p>				
<p><b>2. Problem Solving through a High-level Programming Language</b></p> <p>Computing with numbers and strings; lists and files; functions; decision structures; loop structures and Booleans; sets and dictionaries.</p>				

	<p><b>3. Program Design</b></p> <p>Problem analysis and design; function abstraction and modularisation; bottom up and top down approaches</p> <p><b>4. Application of Computational Techniques</b></p> <p>Applications in different domains, for example, financial data computing, puzzle solving, development of games, web development, and scientific computation.</p>																																						
<p><b>Teaching/ Learning Methodology</b></p>	<p>The 39-hour lecture will cover the main concepts and ideas in solving problems with computers and illustrate them using many examples. The students will also be given time to practice those concepts and ideas right away. The laboratory will be used to mainly cover program design.</p>																																						
<p><b>Assessment Methods in Alignment with Intended Learning Outcomes</b></p>	<table border="1" data-bbox="384 667 1469 1205"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="5">Intended subject learning outcomes to be assessed</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td><b>Continuous Assessment</b> [such as assignments, quizzes and mini-project(s)]</td> <td><b>55%</b></td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> <td>✓</td> </tr> <tr> <td><b>Examination</b></td> <td><b>45%</b></td> <td>✓</td> <td></td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td><b>Total</b></td> <td><b>100%</b></td> <td colspan="5"></td> </tr> </tbody> </table> <p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>Assignments and quizzes are designed to help achieve learning outcome (a) and (d), whereas the mini-project(s) are designed for achieving (b), (c) and (e).</p> <p>The examination will cover both (a), (c) and (d).</p>						Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed					a	b	c	d	e	<b>Continuous Assessment</b> [such as assignments, quizzes and mini-project(s)]	<b>55%</b>	✓	✓	✓	✓	✓	<b>Examination</b>	<b>45%</b>	✓		✓	✓		<b>Total</b>	<b>100%</b>
