

Subject Description Form

Subject Code	COMP3121
Subject Title	Social and Collaborative Computing
Credit Value	3
Level	3
Pre-requisite / Co-requisite / Exclusion	
Objectives	<p>The objectives of this subject are to:</p> <ol style="list-style-type: none"> 1. provide students with an understanding on the concepts, history, background, and the design principles of social computing; 2. provide students with an understanding on the behaviour of social networks and applications of social computing; 3. equip students with design and development experience on social network data collection and analysis; 4. provide students with understanding on social network analysis; and 5. provide students with special topics of social computing, e.g., privacy, security, business models.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <p><u>Professional/academic knowledge and skills</u></p> <ol style="list-style-type: none"> (a) apply the specialised concepts, background knowledge and design principles behind different social networks; (b) analyse the behaviour of the new social interaction methods and apply specialised social computing techniques in various different scenarios in industry and society; (c) design and develop tools for analysis of social network websites; (d) utilise and apply the principles and methods used in analysing social networks in related areas; (e) understand the specific social issues associated with social computing; <p><u>Attributes for all-roundedness</u></p> <ol style="list-style-type: none"> (f) solve problems using systematic approaches, both independently and in groups; and (g) apply sophisticated social and collaborative knowledge to solve non-routine technical problems based on evidences and logical reasoning.

Subject Synopsis/ Indicative Syllabus	Topic
	1. Introduction to Social Computing History, concepts, importance and definitions.
	2. Technology of Social Computing Blogging, collaborative filtering, Internet search, social media and networking, Wikipedia and wikis. The background of the Internet. Web 2.0.
	3. Behaviour of Social Computing Motivations and Social psychology. Online credibility. Social impacts. Social roles in online environments. Design and organisation of online social websites.
	4. Culture of Social Networks Authoring. Globalisation. Social Presence. Virtual communities.
	5. Policies of Social Networks Privacy. Intellectual property. Business models.
	6. Applications of Social Networks Social network marketing. Data trending.
	7. Modeling of Social Networks Social attributes of nodes and networks. Online social network modeling and data collection.
Teaching/ Learning Methodology	<p>During the lectures, students will come across the concepts, methods, and associated issues of social computing. Tutorials in labs will be used to allow students to work on small individual problems which will give them the prerequisite knowledge for the comprehensive problems. Videos such as seminars given by chief architects of social networks (e.g. Facebook) will be used to allow students to have a better understanding of the history and architecture choices behind the social networks.</p> <p>Assessments will consist of assignments and projects. Assignments may be written reports, oral presentations, or programming assignments, which will be designed to give students hands-on experience with social computing issues. There will be midterm and final exams to evaluate comprehensively the concepts absorbed by the students.</p>

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed						
			a	b	c	d	e	f	g
	Continuous Assessment	60%	✓	✓	✓	✓	✓	✓	✓
	Final Examination	40%	✓	✓	✓	✓	✓		
	Total	100 %							
Student Study Effort Expected	Class contact:								
	▪ Lectures						39 Hrs.		
	▪ Tutorials/Lab						0 Hrs.		
	Other student study effort:								
	▪ Assignments, Projects, Reports, Tests						66 Hrs.		
	Total student study effort						105 Hrs.
