Online Activity Analysis Tool

Copyright © Mr Chan Chun Sang and Ms Tse See Ki, EDC, PolyU. All rights reserved.

Introduction

The Online Activity Analysis Tool (OAAT), developed by The Hong Kong Polytechnic University's Educational Development Centre (EDC), can be used to analyse usage data from Blackboard(Bb) courses. Visualizations and summary tables can be generated for you to do simple learning analytics. Statistical analysis can be performed to help you find out whether the students' online engagement effects their achievement or not. Raw data is also provided for you to explore further exploration and if possible, combine with other datasets to do further analysis by yourself.

This tool is easy to use, and you don't need to install or learn to use any new software. All you need to do is to archive your Bb course and have the Microsoft Excel program installed on your computer.

Our Team

Computer Requirements

The computer requirement for latest version of OAAT (v2.0x) is:

For Windows® only (Windows® 10 preferred)

For Microsoft® Excel™ (2013 or above)

Blackboard

For Blackboard®

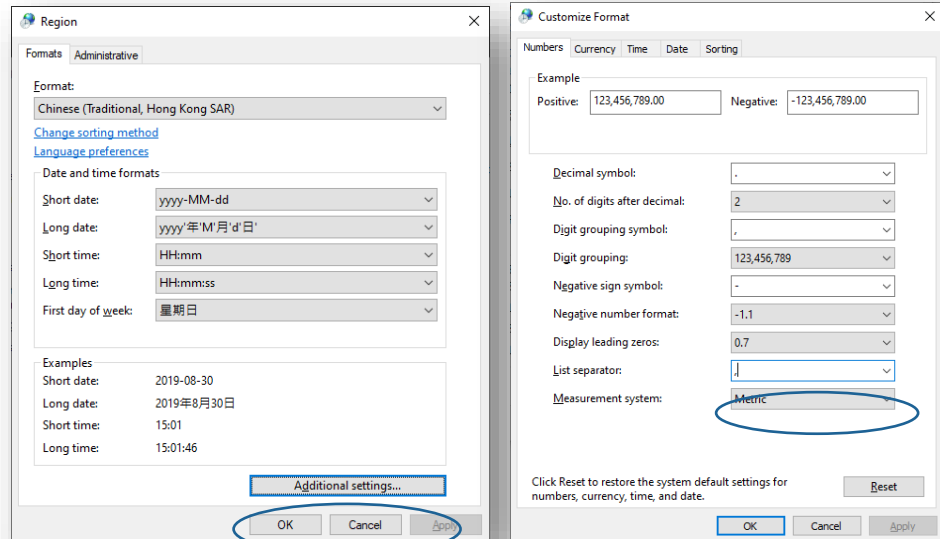

Note: The Online Activity Analysis Tool is an independently developed add-in function and is neither affiliated with, nor authorized, sponsored, or approved by, Microsoft Corporation

3 steps before using OAAT

Step 1. Ensure System List separator is a comma (,)

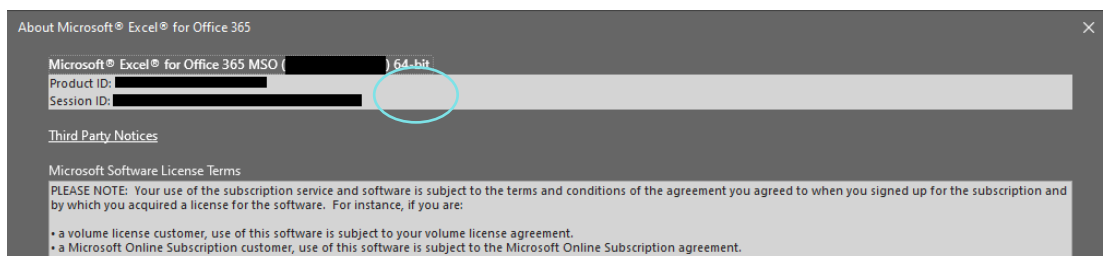

System list separator impacts how functions are entered in Excel, e.g. to separate the arguments in a formula.

To ensure your system list separator is a comma (,), please go to **Control Panel** > **Region** > choose **Formats** tab > select **Additional settings** > choose **Numbers** tab > select “,” in the pull-down menu next to **List separator** > click **OK**.

Step 2. Check your Excel version, 32-bit or 64-bit?

There is different version of OAAT for 32-bit or 64-bit Microsoft Excel. To check which OAAT version to download, please open **Microsoft Excel** > choose **File** tab > go to **Account** > click the icon **About Excel** > find the excel version on the top of the pop-up window

Step 3. Download the archive of your Blackboard course

- a) Login into the Blackboard course that you want to extract data from.
- b) Go to the **Control Panel** at the bottom left corner. Choose **Packages and Utilities** and then **Export/Archive Course**.

What is the archive course feature?

The archive course feature creates a frozen snapshot or permanent record of your course. An archive will include all the content, course statistics, users, and course interactions, such as blog posts, discussions, and grades.

(source from https://help.blackboard.com/Learn/Instructor/Course_Content/Reuse_Content/Export_and_Archive_Courses)

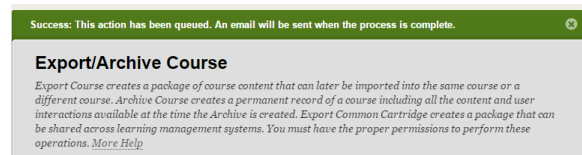

- c) On the Export/Archive Course page, select **Archive Course**.

- d) On the Archive Course page,
 - select the check box for Include **Grade Center History** (this is for marks extraction)
 - In the File Attachments section, select **copy only links to course default directory files** and **copy only links to files stored outside of the course default directory**

Then select **Submit**.

- e) If the course archive is successful, you will see a message displayed.

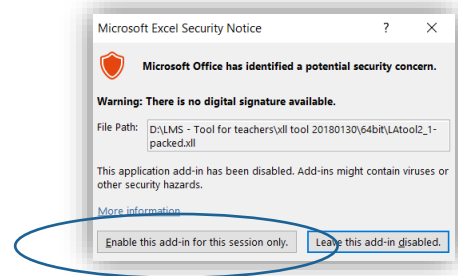

- f) After waiting for several minutes, you may receive an email. You can go back to the page **Export/Archive Course** and download the archived file by clicking on it.

When you open the OAAT

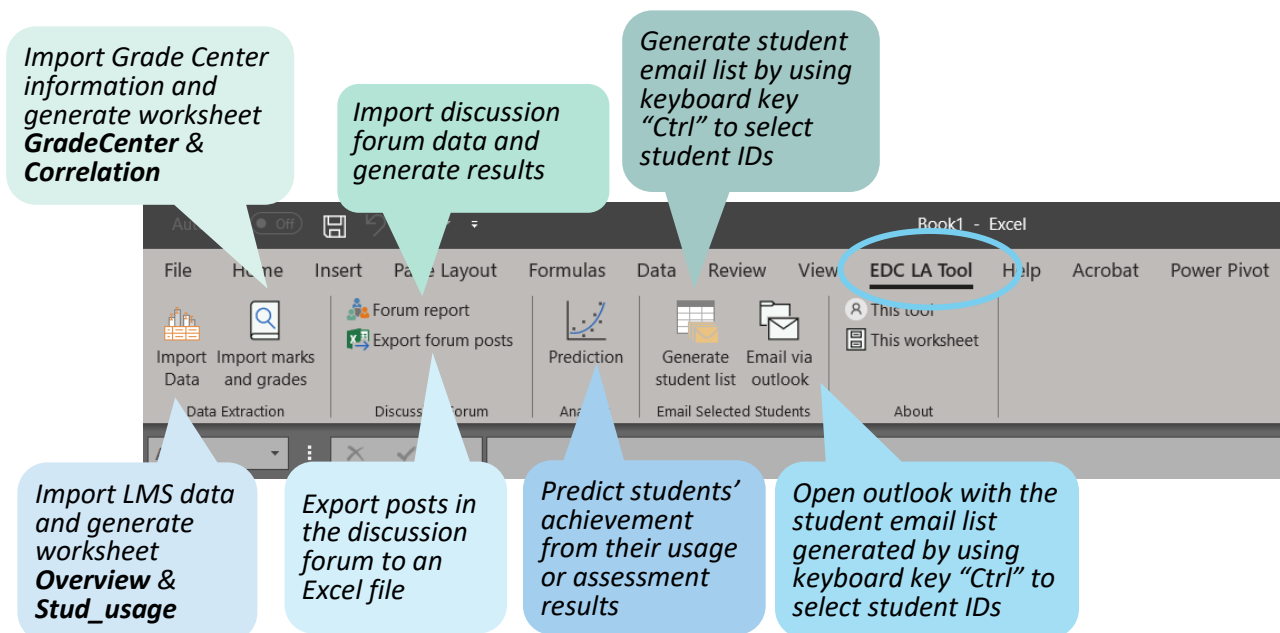

Security Notice

When you open the OAAT in Excel, a security message appears. To open the tool, select **Enable this add-in for this session only**.

OAAT add-in Tab

Once the tool opens, you will find a new tab called “**EDC LA**” in your Microsoft Excel menu ribbon. This is the OAAT. When you click on EDC LA, you will find all the features available in OAAT as shown in the figure below.

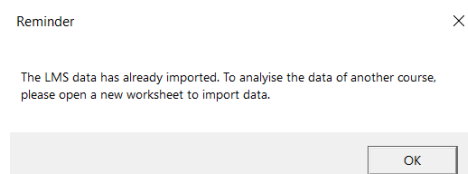

Saving your analysis

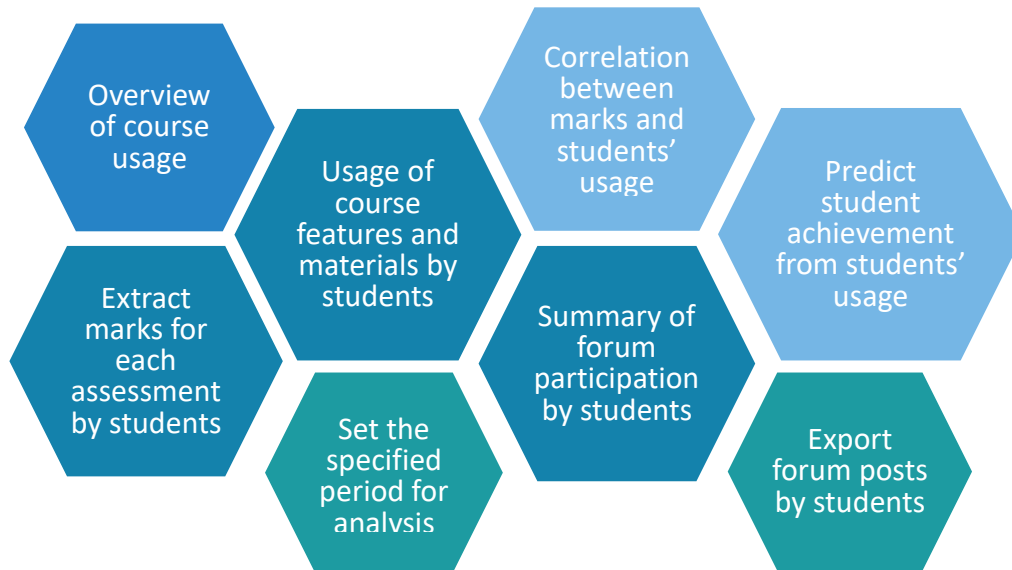

After generating the results, if you want the results for further analysis or future use, you should save the worksheet with analysis into another Excel file.

Using the OAAT again

If you have already imported a set of data and would like to look at another set, you should open a new Excel workbook and import the new data.

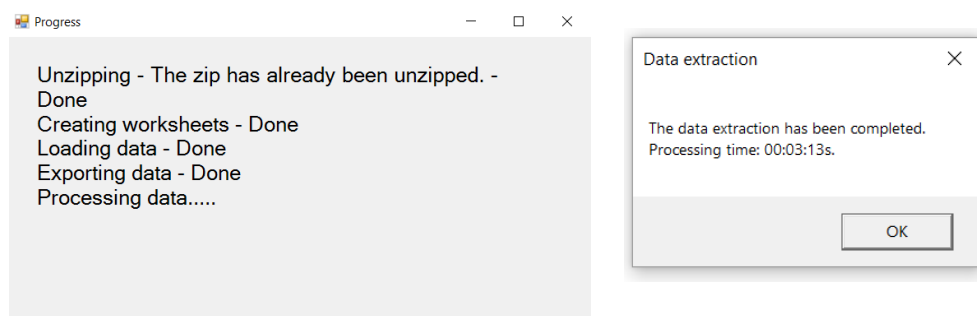

Features of OAAT

For OAAT version 2.3 released in March 2019

Data Import

To import the data, click on the **Import data** button on the OAAT tab and then choose your archived Bb course zip file. Note, there is no need to unzip the Bb course archive. It takes 1 to 3 minutes to extract data and produce charts and tables (depending to the amount of your course activities), so please be patient. When the import finishes, the processing time will be displayed and two worksheets, **Overview** and **Stud_usage**, will be generated.

Overview of the students' course usage

You can find a summary of the course usage during the specified period in the worksheet called **Overview**:

- The pie chart shows the percentage of student enrolled in the Bb course who have logged into the course
- The line chart shows the total course login by all the students in the course over the specified period. Each dot represents the total course login for a day
- This bar chart shows the Top 10 materials in content areas with the highest clicks
- This table shows the percentage of students that have accessed the different features. It also shows the average clicks, standard deviation and the percentiles of the clicks for different features

This can help you get an overall picture of how your students are doing in the Blackboard course. You may also specify the period that are interested in analysing.

You can specify the period you want to analyze in the green highlighted cells, both date and time!

*Worksheets **Stud_Usage**, **Correlation** and **Overview** will be then automatically updated. The default period is from the earliest to the latest action according to the archived Blackboard course. If only the date has been input, the time will be automatically defined as "00:00:00".*

Dashboard - Overview

Period:	From	To
	2018-09-01 12:15:46	2018-12-09 07:14:11

Total Student Enrollment in LMS course

71

% of student who has logged in within the period

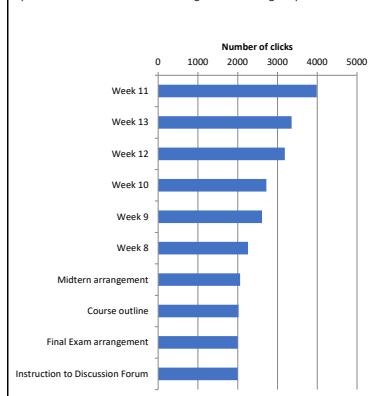

Total Course login over the period

Course materials in content area

Top 10 materials in content area with highest click during the period

Feature Usage

This table shows the percentage of students accessing a feature at least once. The mean, standard deviation and percentiles for clicks for different features are also shown.

Feature	% of Students who have accessed the feature	Number of clicks						
		Mean	SD	Median	5th percentile	25th percentile	75th percentile	95th percentile

Individual students' course usage

You can look at the the usage (clicks) for each student in the Bb course within the specified period in the worksheet called ***Stud_usage***. On the left-hand side of the table, students' usage for different features is shown, while on the right-hand side of the table, the clicks on each type of material by students is displayed. The total number of clicks by students of different features in the course are calculated at the bottom of the table.

Coloured symbols (green and red triangles) are used to indicate students with usage of features among the Top/Bottom 5% of the class. You can copy the usage data to other files for further exploration or analysis.

This worksheet is automatically updated according to the period specified in worksheet **Overview**.

[illegible]

Assessment Marks in Grade Center

The worksheet, **GradeCentre** shows the marks for different assessments for each student in the Grade Center.

You can copy the data here to other files for further exploration or analysis. As the assessment information is extracted as at the date the Bb course is archived, it remains the same regardless of the period specified.

Marks and grades from Grade Center

User ID	User name	Grades for Discussion Forum 1	Grades for Discussion Forum 2	Test 1	Test 2	Test 3	Test 4	Test 5	Test 6	Midterm Test	Final Exam	Total scores	Subject grades

stuAcc10	Singh Audrev	1	1	54	18	20	38	31	69	59	48	49.5	3

Correlation between Assessment and Engagement

The worksheet **Correlation** shows the correlation between entries in the Grade Centre and LMS usage. This can give you an understanding of whether and how strongly pairs of variables are related. This in turn may help you use LMS usage data to predict the assessment marks.

In this worksheet, only LMS usage data is updated automatically according to the period specified in worksheet **Overview**. As the assessment marks are extracted as at the date of archiving the Bb course, they remain unchanged.

Correlation between clicks on features and assessment grades

Usage of discussion forum

The **DiscussionForum** worksheet shows a summary of individual students' participation in each forum, including the following information:

- number of views
- number of posts
- word count for posts
- day of First Post
- date of Last Post
- number of days since last post (as of reference date)
- Types of behaviours
 - **Active in all periods** – have created posts in all three periods*
 - **Active at the beginning** – have created posts only at the beginning (1st period)
 - **Active in the middle** – have created posts only in the middle (2nd period)
 - **Active at the end** – have created posts only at the end (3rd period)
- * The three periods are in equal length (days) between the start date and end date
- Types of Discussion Forum Use
 - **No show** – did not view or create any post
 - **Read only** – only view post but not create post
 - **Top 20% active** – students with total number of post and views that belongs to top 20% of the class
 - **Bottom 10% inactive** – students with total number of post and views that belongs to bottom 10% of the class

After clicking the **Forum Report**, it takes several minutes to extract data and produce statistics and charts (depending to the amount of your course activities). Please be patient. When the data extraction finishes, the processing time will be displayed and worksheet **DiscussionForum** will be generated.

Predicting student achievement

You can do prediction by choosing one student achievement (variables from Grade Center) as the dependent variable and factors affecting dependent variable (variables about LMS usage and from Grade Center).

Step 1. Choose the assessment marks that you want to predict (outcome)

Step 2. Choose the variables (usage or assessment marks) that you think have effect on the outcome

Step 3. Click the **Run Prediction** button to look at the results

The worksheet **Predict** will be displayed after running the prediction results. The following information will be provided:

- **Variance in students' performance explained by these factors (R-square)** – this indicates how well these variables predict the outcome variable. Its value ranges from 0% to 100%. It is proposed that a R-square of value 0.02 is considered to be “small”, 0.13 to be “medium” and 0.26 to be “large” (Cohen, 1988).

Reference:

Cohen J. (1988). *Statistical Power Analysis for the Behavioral Sciences, 2nd Ed.* Hillsdale, NJ: Laurence Erlbaum Associates

- **Unstandardised beta** – represents the amount of change in the outcome due to a change of 1 unit of factor. You can use this to make comparisons within the prediction when just one measurement scale is in use.
- **Standardised Beta** – compares the strength of the effect of each factor to the outcome. The higher the absolute value of the beta coefficient, the stronger the effect.
- **Significant factors** – if the factor is statistically significant in predicting the outcome, the word **Significant** will be displayed to indicate that this factor has an effect on the outcome
- **Importance** – this will show the ranking of the factor on the importance of predicting the outcome. The lower the ranking, the higher the importance

Prediction analysis (Model 1)

Dependent Variable (i.e., what you are predicting) =
Variance in students' performance explained by these factors (R-square) =
Number of students included in the analysis =

Q&A

Q1 Can I use the Online Activity Analysis Tool (OAAT) on my Mac Book Pro, Mac Book, Mack Book Air or iMac?

Ans: The OAAT currently can be used in Windows only. Version for iOS is still under development.

Q2 Who do I contact if I have problems using the tool?

Ans: You can refer to the contact information in the below Support session.

Q3 Can I analyze data from any Learning Management System (LMS)?

Ans: Currently the OAAT can only be used to analyse data from Blackboard courses. But we hope to have a version that works with other LMS in the future.

Q4 Where can I get further information or examples of output from the OAAT?

Ans: You may visit our website (<https://edc.polyu.edu.hk/OAAT>) or contact us.

Support

For support, please contact Mr Chan Chun Sang (email: chun.sang.chan@polyu.edu.hk) or Ms Ada Tse (email: ada.sk.tse@polyu.edu.hk)
