## **Subject Description Form**

Subject Code	EIE3120			
Subject Title	Network Technologies and Security			
Credit Value	3			
Level	3			
Pre-requisite	The students are expected to possess basic knowledge about network protocols (Ethernet and TCP/IP) and cryptography (public-key and private-key encryption, hash function, digital signature).			
Co-requisite/ Exclusion	Nil			
Objectives	This subject teaches students the features and technologies about public and private telecommunication and data networks for the provision of security services of confidentiality, integrity, availability, and authentication.			
Intended Subject Learning Outcomes	<ul> <li>Upon completion of the subject, students will be able to:</li> <li><u>Category A: Professional/academic knowledge and skills</u></li> <li>1. Describe common security issues arising from the use of telecommunication and data networks for the transmission of information</li> <li>2. Describe methods for dealing with security issues as described in (1)</li> <li>3. Identify and solve network security problems by applying knowledge learnt and by using appropriate tools and techniques</li> <li>4. Communicate effectively and understand the importance of life-learning as well as continual professional development</li> </ul>			
Subject Synopsis/ Indicative Syllabus	<ul> <li>Syllabus:</li> <li>Fundamentals: <ol> <li>Basic network technologies and components: Internet, Ethernet, VPN, hub, switch, router, network layer protocols (IP, ICMP, DHCP, NAT), transport layer protocols (TCP, UDP)</li> <li>The network security model, services, mechanisms, and threats: authentication, key exchange, access control, data confidentiality, data integrity, availability, eavesdropping, DOS (denial-of-service), application layer security</li> </ol> </li> <li>Applications: <ol> <li>Authentication and Key Distribution for protected communication: Kerberos, X.509, Public Key Infrastructure, Certification Authority</li> <li>Firewalls: packet filtering, application-level gateway, encrypted tunnels</li> <li>Internet Protocol Security: ESP and IKE</li> <li>Transport layer security: Secure Sockets Layer (SSL) and Transport Layer Security (TLS), SSH</li> </ol> </li> </ul>			

Teaching/Learning	Assessment Intended			Descriptions/Remarks					
Methodology	Method	Sub			5				
		Learning Outcomes							
	Lectures 1, 2, 4		Lectures will be used as the main instruction mechanism, to be						
			discussion, multim		multime	with interactive nedia (video, edX, n), and presentation			
	Tutorials/Practical Works	1, 2, 3, 4		The tutorials require students to apply learned knowledge in different scenarios.					
	Laboratory	2,3		Students are required to identify and solve network security problems by applying knowledge learnt and by using appropriate tools and techniques.					
	Case Study Project	1, 2,	3, 4	Students are requir company network			ired to set up the		
				SME and data networks. They need to identify and solve the network security problems by applying knowledge learnt and using appropriate tools and techniques in the demonstration.					
Assessment Methods in Alignment with Intended Subject Learning Outcomes	Specific Assessment Methods/Tasks		% Weighting		Intended Subject Learning Outcomes to be Assessed				
					1	2	3	4	
	1. Continuous Assessment		50%						
	Project		20%		$\checkmark$		$\checkmark$	$\checkmark$	
	Laboratory		12%				$\checkmark$		
	Assignments		8%		$\checkmark$		$\checkmark$		
	Test		10%						
	2. Examination		50%		$\checkmark$				
	Total		100%	6		L	1		
	The continuous assessment consists of laboratory reports, project report and test.								
Student Study Effort	Class contact (time-tabled):								
Expected	Lecture						21 Hours		
	Tutorial/Laboratory/Practice Classes							18 Hours	
	Other student study								
	<ul> <li>Lecture: preview/review of notes; homework/assignment; preparation for test/quizzes/examination</li> </ul>						30 Hours		
	Tutorial/Laboratory/Practice Classes: preview of materials, revision and/or reports writing						36 Hours		
	Total student study effort:						105 Hours		

Reading List and References	<ul> <li>Reference Books:</li> <li>A set of comprehensive lecture notes will be provided to students for the study of this subject, together with tutorial worksheets and laboratory hand-outs. Students may refer to the following suggested reading lists for a more in-depth and extensive discussion of topics covered and end-of-chapter problem sets (when applicable):</li> <li>1. Stewart, J., &amp; Kinsey, D., <i>Network security, firewalls, and VPNs (Third ed., Jones &amp; Bartlett Learning information systems security &amp; assurance series)</i>. Burlington, MA: Jones and Bartlett Learning, ISBN: 9781284183696, c2021.</li> <li>2. Fiedelholtz, <i>The Cyber Security Network Guide (Vol. 274, Studies in Systems, Decision and Control)</i>. Cham: Springer International Publishing AG, (online access from PolyU Library), ISBN: 3030615901, ISBN: 9783030615901, c2020.</li> <li>3. Stallings, W., <i>Cryptography and network security: Principles and Practice (Seventh ed.)</i>. Hoboken, New Jersey: Pearson, c2017. ISBN: 0134444280.</li> <li>4.
