

Subject Description Form

Subject Code	EIE567
Subject Title	Wireless Power Transfer Technologies
Credit Value	3
Level	5
Pre-requisite/ Co-requisite/ Exclusion	The student is expected to have knowledge in basic electricity, electronics, circuits, and ability to analyze problems using computer tools.
Objectives	<p>From mobile, cable-free re-charging of portable devices, notebooks and electric vehicles to delivering power to lighting systems, wireless power transfer (WPT) technologies offer convenient power supply solutions to consumer products and large infrastructures. This course explains the fundamental principles and latest advances in WPT and illustrates key applications of this emergent technology. The key objectives are to introduce:</p> <ol style="list-style-type: none"> 1. The fundamental principles of WPT for cable-free transfer of power. 2. Theories for inductive power transfer (IPT) based on the coupled inductor model and low-order circuit compensation. 3. Specific converter topologies for lighting and battery charging applications. 4. Technology trends in the adoption of WPT for key consumer applications.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <p>(1) Professional/academic knowledge and skills</p> <ol style="list-style-type: none"> a. Understand the characteristics of power transfer through coupled inductors and the significance of leakage inductance b. Analyze and design appropriate compensation circuits and efficient power converters for WPT applications c. Understand technical requirements for applications involving solid-state loads and battery loads using WPT technologies d. Appreciate the factors affecting adoption of WPT in consumer applications including lightings, charging of smartphones and electric vehicles. <p>(2) Attributes for all-roundedness</p> <ol style="list-style-type: none"> e. Communicate effectively f. Think critically and creatively
Subject Synopsis/ Indicative Syllabus	<p>Syllabus:</p> <ol style="list-style-type: none"> 1. <u>Basic Circuit Theory</u> Review of transformers. Leakage inductance. Circuit compensation principles. Low-order compensations; series and parallel compensations. Resonance and operating frequency. Efficiency equation. 2. <u>Power Converters Fundamentals</u> DC-DC converters. AC-DC converters and inverters. PWM and soft switching principles. Basic topologies with transformers. Input, output and transfer characteristics of power converters. Incorporation of leaky transformer. Control methods.

	<p>3. <u>Compensation Configurations</u> Types of compensation for inductor power transfer. Characteristics for various termination requirements. Design for load-independence output voltage and output current. Efficiency optimization.</p> <p>4. <u>Applications</u> Circuit requirements for various loading conditions. Characteristics of LED loads, resistors and battery loads. Appropriate compensation design. Lighting systems. Battery charging profiles. Electric vehicle charging. Energy efficiency metric for charging.</p> <p>5. <u>Technology Trends</u> Demand for safe power transfer and durable operation. Portable and smart devices. Mobile communication devices. IoT devices and systems. Sensors. Solid-state lighting development. Battery technologies. Electric vehicle development. Renewable source integration trends. Future trends and demand for wireless power transfer.</p>
--	--

Teaching/Learning Methodology	<p>This course emphasizes fundamental understanding of the principles and design procedure of wireless power transfer systems as well as the various parameters involved in the optimization of wireless power transfer systems. Selected examples will help students learn the salient aspects of the technologies and the key design constraints. Case studies of specific consumer applications will reinforce understanding of the basic principles and inspire thoughts on future applications.</p>

Since MSc students are mostly mature technical personnel, engineers and managers, the course must be relevant to their needs. Each student has different background and career needs. Hard memorization of a fixed set of theories and facts is not useful. It is important that students are able to extract useful contents</p>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						a	b	c	d	e	f	1. 	<p>relevant to their profession, and being mature students, they know best what are relevant and useful for them. Thus, instead of taking a written exam, students are given the opportunity to define and formulate their case studies under the guidance of the instructor and to pursue a detailed study and analysis of a topic that is strongly relevant to their experience and needs. The nature of case study may range from deep technology survey, innovative system design, to detailed circuit analysis at research level, catering individual needs. The case study project requires students to do further reading, search for information, keep abreast of current development, develop a proposal for specific application, give a presentation and write a complete report.</p>	
<p>Student Study Effort Required</p>	<p>Class contact:</p>	
	<ul style="list-style-type: none"> ▪ Lecture/Tutorial 	<p>21 Hours</p>
	<ul style="list-style-type: none"> ▪ Case study – presentations and discussions 	<p>15 Hours</p>
	<ul style="list-style-type: none"> ▪ Test 	<p>3 Hours</p>
	<p>Other student study effort:</p>	
	<ul style="list-style-type: none"> ▪ Lecture: further reading, doing homework/ assignment 	<p>42 Hours</p>
	<ul style="list-style-type: none"> ▪ Tutorial/Project: design, writing a report 	<p>30 Hours</p>
	<p>Total student study effort</p>	<p>111 Hours</p>
