<u>Material and Energy Balances</u> Laws of mass and energy conservation; material balances for single- and	• • •	<ul> <li>Dimension and units; definition and measurement of process variables: temperature, pressure, flow rate and mixture composition; properties of materials: ideal gas law, multiple phase systems and equilibrium relationships.</li> <li><u>Brief Introduction of Food Processing Technology</u> The composition and layout of common processes for food products; common separation processes (evaporation, crystallization, filtration, centrifugation, drying, absorption, distillation, liquid-liquid extraction, membrane processes).</li> </ul>

	terms, enthalpy changes and states of water, energy balances and heat exchange; simultaneous material and energy balances.							
	<u>Principles of Heat Transfer</u> Basic means of heat transfer: conduction, convection and radiation; heat transfer in solids and fluids; heat transfer coefficients; common heat- transfer equipment (heat exchangers); heat transfer and energy balances in evaporation.							
	<u>Fluid Properties and Flow</u> Basic characteristics of fluids: hydrostatic pressure, fluid viscosity and non-Newtonian fluid rheology, laminar and turbulent flow; fluid flow energy balances, friction losses; agitation and mixing; principles of common flow meters.							
Teaching/Learning Methodology	Lectures: to introduce the essential contents, to elaborate the major principles, concepts and relationships and processing units. Practical examples and problems will be used to illustrate the principles. Tutorials (in smaller groups): to make further explanation/clarification of the major points and difficult/problematic contents, to apply the concepts and principles in problems and exercises, and to have more interactive and effective contact and discussion with the students. After class: homework assignments and exercises will be given to students. On-line resources: a subject web will be set up and used as a teaching aid. Detail answers/solution manuals are provided to the students for most of the assignment, test and examination questions.							
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			а	b	с	d		
	1. Final exam	50	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$		
	2. Course work	50	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$		
	Total	100 %						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Learning outcomes will be assessed continually through written assignments, quizzes and tests, and lab reports. The connection of these assessments to the learning outcomes will be stated explicitly to the students.
