Subject Description Form

Subject Code	AAE3103/IC381			
Subject Title	Appreciation of Aircraft Manufacturing Processes			
Credit Value	3 Training Credits			
Level	3			
Pre-requisite/ Co-requisite/ Exclusion	Nil			
Objectives	The subject provides opportunity for students to gain practical and hands-training experiences in the following fundamental aircraft engineering an maintenance procedures and practices:			
	• Sheet metal fabrication,			
	Composites fabrication,			
	 Machining, 			
	Material testing			
	This subject also equips students with basic workshop skills necessary for handling manufacturing project subjects.			
Intended Learning	Upon completion of the subject, students will be able to:			
Outcomes	a) Demonstrate a practical understanding on the working principle, capability and operation of major aircraft manufacturing processes;			
	b) Select and use appropriate materials and manufacturing processes for specific parts requirements;			
	c) Show a commitment to quality, timeliness, regulation conformance, and continuous improvement.			
Subject Synopsis/	1. Basic Machining			
Indicative Syllabus	Milling; Turning.			
	2. Sheet-metal Trade Practices			
	Drilling and Riveting; Removal and Installation of Hi-Lok; Removal, Inspection and Installation of Anchor Nut.			
	3. Composites Trade Practices			
	Composite Repair; Wet-layup process; Repair by wet-layup; Repair by Prepreg with hot bonder.			
	4. Material Testing			
	Progression of tensile failure (metal); Progression of tensile failure (composites); Progression of compressive failure; Progression of fatigue crack; Progression of shear failure			

Learning Methodology

Workshop-based hands-on activities will be used for students to appreciate the principles and operations of common aircraft manufacturing technologies, and to acquire essential practical skills for them to carry out project tasks.

Short lectures, demonstrations, and tutorials will be mixed with hands-on activities to deliver technical contents.

Technical handouts will be available on-line for students to familiarise with the technical contents before lesson.

Assessment Methods in Alignment with Intended Learning Outcomes

Specific Assessment Methods/Tasks	Weighting (%)	Intended Subject Learning Outcomes to be Assessed		
		a	b	c
Workshop assignments	40	X	X	X
Quizzes	20	X	X	
Training report	40	X	X	X
Total	100			

Workshop assignments in the form of small manufacturing tasks will be used to assess how well students understand the working principle, capabilities, and operation of the manufacturing processes. Students' skill-level will be evaluated by the artifacts they produced, while their practical knowledge and work attitude be evaluated by individual oral presentation.

Multiple-choice quizzes will be used to assess broadly the students' understanding of declarative knowledge covered by the subject, as well as their material and process selection judgement.

Individual training report will be used to assess holistically how well the students consolidate technical contents, reflect on their engineering decisions, and critically review their learning experience. The students also elaborate on their professional attitude and commitment in their writing.

Student Study Effort Expected

Class Contact

Total Study Effort	90 Hrs.
Other Study Effort	0 Hrs.
 Hands-on practices 	90 Hrs.
