Subject Description Form

Subject Code	AAE3104/IC388
Subject Title	Aircraft Manufacturing and Maintenance Practice
Credit Value	3 Training Credits
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	The subject provides opportunity for students to learn the principles, gain practical and hands-on training experiences in the following fundamental aircraft engineering and maintenance procedures and practices: • Electrical Wiring Interconnection and Termination, • Welding Trade Practices
	Welding Trade Practices,NDT Trade Practices
	This subject also equips students with basic workshop skills necessary for handling manufacturing project subjects.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) Demonstrate a practical understanding on the working principle, capability, limitations and operation of fundamental aircraft manufacturing and maintenance processes; b) Select and use appropriate materials and manufacturing processes for specific parts requirements as applied to aviation engineering; c) Show a commitment to quality, timeliness, regulation conformance, and continuous improvement as applied to aviation engineering.
Subject Synopsis/ Indicative Syllabus	 Avionics Wire connection and Termination Cables and Connectors Identification; ESDS Handling; Removal and Installation of Connector Pin; Cable Printing; Crimping; Continuity, Insulation and Bonding Testing; Fabrication of an Electrical / Electronic product. Welding Trade Practices Welding safety; Gas Metal Arc Welding; Gas Tungsten Arc Welding; Welding visual inspection. NDT Trade Practices

	Non-destructive Testing; Ultrasonic Tests; Eddy-current Tests; UT Bond-testing; Penetrant Tests; Radiographic Tests.						
Learning Methodology	the principles and opera	shop-based hands-on activities will be used for students to appreciate principles and operations of common aircraft manufacturing plogies, and to acquire essential practical skills for them to carry out et tasks.					
	Short lectures, demonstrations, and tutorials will be mixed with hands-on activities to deliver technical contents.						
	Technical handouts will be available on-line for students to familiarise with the technical contents before lesson						
Assessment Methods in Alignment with Intended Learning	Specific Assessment Methods/Tasks	Weighting (%)		Intended Subject Learning tcomes to be Assessed			
Outcomes			a	b	c		
	1. Workshop assignments	40	X	X	X		
	2. Quizzes	20	X	X			
	3. Training report	40	X	X	X		
	4. Total	100					
	Workshop assignments in the form of small manufacturing tasks will be used to assess how well students understand the working principle, capabilities, and operation of the manufacturing processes. Students' skill-level will be evaluated by the artifacts they produced, while their practical knowledge and work attitude be evaluated by individual oral presentation.						
	Multiple-choice quizzes will be used to assess broadly the students' understanding of declarative knowledge covered by the subject, as well as their material and process selection judgement.						
	students consolidate techn decisions, and critically review	will be used to assess holistically how well the innical contents, reflect on their engineering view their learning experience. The students also anal attitude and commitment in their writing.					
Student Study Effort Expected	Class Contact						
	 Hands-on practices 			90 Hrs.			
	Other Study Effort			0 Hrs.			
	Total Study Effort 90 Hrs.					•
