

## Subject Description Form

<b>Subject Code</b>	EE2101/IC2105
<b>Subject Title</b>	Engineering Communication and Fundamentals
<b>Credit Value</b>	4 Training Credits
<b>Level</b>	2
<b>Pre-requisite/ Co-requisite/ Exclusion</b>	Nil
<b>Objectives</b>	This subject offers a wide spectrum of fundamental engineering practices that are essential for a professional engineer. This subject includes Engineering Drawing and CAD, Industrial Safety and Electronic Product Safety Test and Practice, Basic Mechatronic Practice and Basic Scientific Computing that aims at providing fundamental and necessary technical skills to all year 1 student interested in engineering.
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>a) Describe the principles and conventional representation of engineering drawings according to engineering standards and be able to use it as a medium in technical communication and documentation with CAD application, modelling and practice in engineering applications;</li> <li>b) Interpret basic occupational health and industrial safety requirements for engineering practice;</li> <li>c) Explain common electronic product safety tests;</li> <li>d) Develop a simple mechatronic system to solve an engineering problem; and</li> <li>e) Apply scientific computing software for basic computation, data visualisation and programming in science and engineering;</li> </ol>

## Subject Description Form

<b>Subject Synopsis/ Indicative Syllabus</b>	<ol style="list-style-type: none"><li>1. <u>(TM8059) Engineering Drawing and CAD</u><ol style="list-style-type: none"><li>1.1 Fundamentals of Engineering Drawing:<p>Principles of engineering drawing, dimensioning and tolerances; types of drawings, such as part drawing and assembly drawing; conventional representation of common machine elements and parts; wiring diagram and wiring table for electrical installation; system block diagram for the electrical system; architectural wiring diagram.</p></li><li>1.2 Introduction to CAD<p>Features of the 2D CAD system; 2D drawings techniques, such as basic object construction, annotation, dimensioning; setup of 2D plotting; general concepts on 3D computer modelling; parametric feature-based solid modelling; construction and detailing of solid features; concepts of assembly modelling; virtual validation and simulation, generation of 2D drawings from 3D parts and assemblies; data exchange; techniques for export files for different processes (e.g. 3D printing, laser machining, VR)</p></li></ol></li><li>2. <u>(TM2009) Industrial Safety</u><ol style="list-style-type: none"><li>2.1. Safety Management: Overview, essential elements of safety management, safety training, accident management, and emergency procedures.</li><li>2.2. Safety Law: F&amp;IU Ordinance and principal regulations, OSH Ordinance and principal regulations.</li><li>2.3. Occupational Hygiene and Environmental Safety: Noise hazard and control; dust hazard and control; ergonomics of manual handling.</li><li>2.4. Safety Technology: Mechanical lifting, fire prevention, dangerous substances and chemical safety, machinery hazards and guarding, electrical safety, first aid, job safety analysis, fault tree analysis, and personal protective equipment.</li></ol></li><li>3. <u>(TM1116) Electronic Product Safety Test and Practice</u><ol style="list-style-type: none"><li>3.1 Use of basic electronic test instruments, current and voltage measurements, waveform measurement, power supply and signal sources;</li><li>3.2 Electronic product safety standards; electronic product test methods, such as high voltage isolation test, insulation resistance test, continuity test, leakage current measurement, electrostatic discharge (ESD) Test etc.</li></ol></li></ol>
--	---

## Subject Description Form

	<p>4. <u>(TM0510) Basic Mechatronic Practice</u></p> <p>4.1. Definitions of mechatronics; mechatronic system design approach; key elements of a mechatronic system, such as sensor and actuator, mechanical drives, digital control, signal conditioning, and human-machine interfaces.</p> <p>4.2. Introduction of design and operation of typical mechatronic systems, such as robotic arms, elevator systems, mobile robots, manufacturing and logistic system;</p> <p>4.3. Design of mechatronic system using programmable controllers and development software such as PLC and Microcontroller system; use of simulation software packages to support system prototyping.</p> <p><b>One of the following as decided by hosting programme</b></p> <p>5. <u>(TM3014) Basic Scientific Computing with MATLAB</u></p> <p>5.1. Overview of the scientific computing with MATLAB; interactive calculations, variables, vectors, matrices and string; mathematical operations, polynomial operation, data analysis and curve fitting; file I/O functions; basic 2D and 3D plots.</p> <p>5.2. M-file programming &amp; debugging; scripts, functions, logic operations, flow control; introduction to the graphical user interface.</p> <p>6. <u>(TM3300) Basic Scientific Computing with Python</u></p> <p>6.1. Overview of the scientific computer with Python. Basic data structures and data operations; script programming and debugging; logic operations, flow control and graphical user interfaces.</p> <p>6.2. Use of functions and common Python packages for data manipulation and processing.</p> <p>6.3. Data visualization by using graphics packages;</p>
<b>Learning Methodology</b>	<p>The teaching and learning methods include lectures, workshop tutorials, and practical works. The lectures are aimed at providing students with an overall and concrete background knowledge required for understanding key issues in engineering communication, the use of standard engineering components and systems, and the importance of industrial safety. The workshop tutorials are aimed at enhancing students' in-depth knowledge and ability in applying the knowledge and skills to complete specific tasks. The practical works aim at facilitating students to review the diverse topics covered in this course and perform active learning with research, practice, questioning, and problem-solving in a unified activity.</p>

**Subject Description Form**

<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	Assessment Methods		Weighting (%)		Intended Learning Outcomes Assessed				
					a	b	c	d	e
	Continuous Assessment								
	1. Assignment / Project		Refer to individual Module Description Form		✓	✓	✓	✓	✓
	2. Test				✓	✓	✓	✓	
	3. Report / Logbook				✓	✓	✓	✓	
	Total		100						
	Assessment Methods		Remarks						
	1. Assignment /project		Assignments are designed for students to reflect and apply the knowledge periodically throughout the training.						
	2. Test		Test is designed for students to review their understanding of specific topics.						
3. Report / Logbook		Report / Logbook is designed to facilitate students acquiring a deep understanding of the topics of the training and to present those concepts clearly.							
<b>Student Study Effort Expected</b>	<b>Class Contact</b>		<b>TM8059</b>	<b>TM2009</b>	<b>TM1116</b>	<b>TM0510</b>	<b>TM3014 or TM3300</b>		
	▪ Mini-lecture		11 Hrs.	7 Hrs.	2 Hrs.	6 Hrs.	6 Hrs.		
	▪ In-class Assignment/ Hands-on Practice		40 Hrs.	8 Hrs.	4 Hrs.	21 Hrs.	15 Hrs.		
	<b>Other Study Effort</b>								
	▪ Nil								
	<b>Total Study Effort</b>		<b>120 Hrs.</b>
