Subject Description Form

Subject Code	ISE3010/IC383				
Subject Title	Integrated Aviation Systems Project				
Credit Value	4 Training Credits				
Level	3				
Pre-requisite/ Co-requisite/ Exclusion	NIL				
Objectives	This subject aims at developing students' practical understanding of common technological systems and processes found in aviation industry.				
	Through undertaking hands-on projects, students will also be able to integrate their academic knowledge with practical skills about key engineering tasks including: problem identification, design, fabrication, and evaluation.				
Intended Learning	Upon completion of the subject, students will be able to:				
Outcomes	a) recognize the constraints imposed on common aviation systems by technical, economic, environmental and safety factors;				
	b) identify technical problems and improvement opportunities in a given aviation system by applying academic knowledge;				
	c) design a technical system or process to meet desired needs in aviation industry;				
	d) effectively work individually on their own initiative, and as members of a team;				
	e) show a commitment to quality, timeliness, life-long learning and continuous improvement.				
Subject Synopsis/ Indicative Syllabus	 Airframe fabrication Technical, economic, environmental and safety characteristics of common metal and composites airframe structures; Working principle and operation of metal and composites fabrication processes: bending, drilling, riveting, wet-layup, pre-preg layup and autoclave curing; Practical appreciation of airframe inspection and repair techniques. 				
	Logistics automation				
	 Automation systems and the operation of key elements: Actuators, Sensors, Programmable Controller; Working principle and operation of Radio Frequent Identification (RFID) system for object tacking and identification; 				

Subject Description Form

•	Integration of system components for typical logistics equipment such
	as conveyor systems, AS/RS (Automatic storage and retrieval systems),
	etc.;

- Enabling information technologies for logistics systems such as computer networking, Middleware, etc.
- Appreciation of robotic technologies: Collaborative robot, SLAM and AMR.

Learning Methodology

Workshop-based hands-on activities will be arranged for students to appreciate the principles and operations of common aircraft technologies and systems. The activities also help students to acquire essential practical skills for them to carry out project tasks. Short lectures, demonstrations, and tutorials will be mixed with hands-on activities to deliver technical contents.

Group-based integrative-project will be used to enable students to integrate practical skill sets through fabricating and optimising physical products. Examples of physical products are: Airframe structures, ground equipment, aircraft maintenance tools, jigs and gauges, *etc*. The project will also encourage students to seek, learn and apply information that is pertinent to the work they are undertaking.

Technical handouts will be available on-line for students to familiarise with the technical contents before lesson.

Assessment Methods in Alignment with Intended Learning Outcomes

Assessment Methods	Weighting (%)	Intended Learning Outcomes Assessed				
		a	b	c	d	e
1. Workshop assignments	45	✓	✓	✓	✓	✓
2. Quizzes	15	✓	✓			
3. Performance of final product	20		✓	✓	✓	
4. Training report	20		✓	✓	✓	✓
Total	100		•			

Workshop assignments in the form of system configuration or fabrication tasks will be used to assess how well students understand the working principle, capabilities, and operation of the aviation systems and processes. Students' skill-level will be evaluated by the artifacts they produced, while their engineering judgment and critical thinking be evaluated by individually filled task worksheets.

Quizzes will be used to assess broadly the students' understanding of declarative knowledge covered by the subject.

Subject Description Form

	Performance of final product, evaluated by product trials, QC checks, and supervisors' inspection, will be used to assess how well the students exercise their engineering judgments, and how efficient they working as a team. Individual training report will be used to assess holistically how well the students consolidate technical contents, reflect on their engineering decisions, and critically review their teamwork performance. The students also elaborate on their professional attitude and commitment in their writing.			
Student Study	Class Contact			
Effort Expected	 Lectures, tutorials, and hands-on practices 	20 Hrs.		
	Project	100 Hrs.		
	Other Study Effort	0 Hrs.		
	Total Study Effort	120 Hrs.
