

## Subject Description Form

<b>Subject Code</b>	CSE2705/IC2705
<b>Subject Title</b>	Integrated Project for Fire Engineering
<b>Credit Value</b>	3 Training Credits
<b>Level</b>	2
<b>Pre-requisite/ Co-requisite/ Exclusion</b>	Nil
<b>Objectives</b>	This subject aims to equip students with the techniques to manage building projects by adopting industry's latest technologies, techniques, methods and practices. This subject also aims to provide students an opportunity in applying the techniques in real-life situation. It is aimed for students, upon completion of this subject and IC2701, to attain professional competence equivalent to CIC-accredited BIM Manager (CCBM).
<b>Intended Learning Outcomes</b>	Upon completion of the subject, students will be able to: a. Plan and set up the operations of building information modelling systems in construction projects; b. Be aware of the industry's latest design and construction practices and their implication on BIM; c. Apply active and passive fire protection for building projects; and d. Suggest advanced construction practices for construction projects.
<b>Subject Synopsis/ Indicative Syllabus</b>	<u>Advanced Building Information Modelling (BIM)</u> <ul style="list-style-type: none"><li>• Digital information management, collaboration and integration; and</li><li>• Commercial and contractual issues of BIM projects.</li></ul> <u>Modular Construction Practices</u> <ul style="list-style-type: none"><li>• Introduction to the concept of design for manufacture and assembly (DfMA) and the development from in-situ to modular integrated construction (MiC);</li><li>• Use of advanced technology such as VR/AR, AI, RFID, BIM, high performance materials, 3D printing etc. in MiC; and</li><li>• Advantages and technical challenges of MiC.</li></ul> <u>Fire Protection Systems and Materials</u> <ul style="list-style-type: none"><li>• Introduction to fire safety practices and regulations;</li><li>• Design of automatic fire detection/alarm system in building projects; and</li><li>• Use of fire resistant materials and impact on structural health under fire.</li></ul> <u>Mini Project</u> <ul style="list-style-type: none"><li>• Design for and produce by traditional and advanced methods such as in-situ casting and modular construction using 3D printing;</li></ul>

## Subject Description Form

	<ul style="list-style-type: none"> <li>• Technical and economical characteristics of traditional and advanced production methods; and</li> <li>• Advantages and technical challenges of traditional and advanced production methods.</li> </ul>					
<p><b>Learning Methodology</b></p>	<p>The subject will be delivered through the following learning methods:</p> <ol style="list-style-type: none"> <li>Mini-lectures – Lectures and demonstrations are used to introduce and explain key concept, definition and application of BIM and industry’s latest practices. Multi-media illustrations are used for students to appreciate the good practices of the practices, as well as case studies and small group discussions are used to relate these knowledges with real-life practices;</li> <li>Hands-on workshop - Students are organized to perform hands-on works in small groups under supervision of IC training staff in workshops. A wide range of practices are demonstrated. Hands-on sessions are arranged, if appropriate, for students to practice the industry standards and techniques;</li> <li>Assignments - Individual assignments are arranged to deepen students’ knowledge and sharpen their skills on BIM operation and industry’s latest practices;</li> <li>Mini-project – Students are organized in groups to carry out design, production and post-project evaluation to apply their training experiences and appreciate the challenges of construction practices in real-life applications; and</li> <li>Self-learning - Independent on-line learning materials are provided for students to broaden their horizon of industry development.</li> </ol>					
<p><b>Assessment Methods in Alignment with Intended Learning Outcomes</b></p>	<p><b>Assessment Method</b></p>	<p><b>Weighting (%)</b></p>	<p><b>Intended Subject Learning Outcomes Assessed</b></p>			
			<p><b>a</b></p>	<p><b>b</b></p>	<p><b>c</b></p>	<p><b>d</b></p>
	<p>Assignments</p>	<p>30</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>
	<p>Reports</p>	<p>40</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>
	<p>Tests</p>	<p>30</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>	<p>✓</p>
<p>Assignments - Students’ performance are assessed continuously by assignments in the form of worksheets. Students’ performance in the context of project work will also be monitored and assessed accordingly by IC training staff.</p> <p>Reports - Students’ reflection on their learning outcomes are captured by their training report.</p> <p>Tests - Multiple-choices and short-question type on-line tests are used to assess students on their declarative knowledge and their analytical thinking.</p>						

## Subject Description Form

<b>Student Study Effort Expected</b>	<b>Class Contact</b>	
	Mini lecture and demonstration	24 Hrs
	Hands-on practice, tests and project work	66 Hrs
	<b>Other Study Effort</b>	
	Assignment and report	9 Hrs
	Self-learning	6 Hrs
	<b>Total Study Effort</b>	<b>105 Hrs</b>
