Appendix II

GENERAL UNIVERSITY REQUIREMENTS FOR SENIOR YEAR STUDENTS

SECTION 1 - GENERAL INFORMATION

Programme Title	BSc (Hons) Scheme in Logistics and Enterprise Engineering					
Award Title	BSc (Hons) in Logistics Engineering with Management (LEM)	BSc (Hons) in Enterprise Engineering with Management (EEM)				
Mode of Study	Full-	time				
Normal Duration	Normal Year 1 intake Full-time Mode: 4 Years Senior Year Intake Full-time Mode: 2 Years					
Total Credit Requirements for Graduation	Normal Year 1 intake: Normally 121 credits* + 10 IC Training credits Senior Year intake: Normally 64 credits* + 6 IC Training credits *exact number of credits depends on the academic background of students					
Medium of Instruction	The programme is delivered in English version					
Host Department	Department of Industrial and	Systems Engineering (ISE)				
Contributing Departments	AF, AMA, CLC, ELC, FENG, IC, LMS, MM	AF, AMA, CLC, ELC, FENG, IC, MM				
Professional Recognition	The programme has been granted full accreditation by the Hong Kong Institution of Engineers (HKIE). Graduates have been granted full exemption (Logistics Stream) from the Professional Qualifying Examination (PQE) leading to the Chartered Membership of the Chartered Institute of Logistics and Transport in Hong Kong (CILTHK).	The programme is dual accredited by the Chartered Management Institute (CMI). Students will automatically receive a second professional qualification upon successful completion of the programme.				

This Programme Requirement Document is subject to review and changes which the Department can decide to make from time to time. Students will be informed of the changes as and when appropriate.

SECTION 2 - OVERALL PROGRAMME AIMS AND INTENDED LEARNING OUTCOMES

2.1 UNIVERSITY MISSION

The design of this programme begins with the Mission Statement of the University stated below.

- 1. To pursue impactful research that benefits the world.
- 2. To nurture critical thinkers, effective communicators, innovative problem solvers and socially responsible global citizens.
- 3. To foster a University community in which all members can excel in their aspirations with a strong sense of belonging and pride.

2.2 RATIONALE AND PROGRAMME AIMS

Rationale and Aims of LEM award

Logistics Engineering with Management concerns the design, development, testing, implementation, control, operation, and maintenance of various systems involving the supply and distribution of goods and services and their associated information flow, with particular emphasis on the development of new systems and the reengineering of existing systems. This enables better understanding of the complex problems of logistics engineering and business operations, and draws on specialised knowledge and skills in engineering, management, and social sciences to specify, predict, and evaluate the results to be obtained from such systems.

The overall aim of this programme is to produce professionals who are competent in the design, implementation, control, execution and management of logistics systems, and related technologies used in industry. In this programme, students will study the underpinning knowledge and theory in Logistics Engineering and Management. As a consequence, the graduates of the programme will be the logistics engineers and professionals.

On completion of the programme students should

- 1. be versed in the activities that persons employed in the logistics engineering and management disciplines that they may be called upon to fulfill in the execution of their duties, recognising the necessity of life-long learning;
- 2. be capable of formulating problems, recognising areas in logistics organisation where improvements are necessary, devising and implementing strategies aimed at producing solutions by the application of procedures (the application of principles, techniques and methods) recognising their limitations so that they can design and manage logistics systems in the logistics industry;
- 3. have been exposed to a range of academic activities of such style and content as will enable them to develop effective communication skills (oral, written, graphical and numerical) so that they are able to work both independently and in groups;
- 4. have an awareness of the responsibilities and ethics of logistics engineering professionals and a realisation of the constraints imposed on the organisation by economic and environmental factors, recognising the global implications of the logistics industry;

5. have satisfied the examination requirements of the Chartered Institute of Logistics and Transport (CILT) if particular subjects are taken, leading to the Chartered Membership of the Chartered Institute of Logistics and Transport (CILT).

Rationale and Aims of EEM award

Enterprises are organisations, industrial and commercial, that shape the economy of the modern world. Many enterprises have struggled in their attempts to identify, capture and manage modern business opportunities. In order to be successful, they must be efficient in their operations and be able to adapt to changes in the environment, in the market and in customer expectations.

Enterprise Engineering is that body of knowledge, principles and practices concerned with the analysis, design, implementation, and operation of the enterprise using scientific methods and tools. Management can be defined as the art of getting things done through people. It is the process of leading and directing an organisation, often a business, through the deployment and use of resources.

Global competition and advancement in information technology has provided opportunities as well as challenges for enterprises. To ensure competitive edge, enterprises are concerned with rationalizing and streamlining their organisational design and operational workflow to add value to their products and services. To be successful, the mastering and integration of the latest knowledge and techniques in enterprise engineering, business management and information technology are needed. They are instrumental for the effective design, change and management of modern enterprises.

This programme aims to provide students with an integrated education at the honours degree level to enable them to understand, integrate and apply in a professional way the principles and practices of enterprise engineering and business management for effective planning and efficient operation of modern business enterprises in contemporary industrial and business environment.

On completion of this programme, students are expected to:

- 1. have the knowledge and understanding of the principles and practices of enterprise engineering and business management to serve the duties they may be called upon to manage effectively and efficiently modern enterprises in the contemporary industrial and business environment.
- 2. be capable of critical thinking in formulating problems and in developing and implementing strategies and courses of actions aimed at producing the most appropriate solution for a situation.
- 3. be able to communicate and work effectively as individuals and as members of teams.
- 4. have an awareness of the professional ethics, responsibilities and other societal factors in practicing enterprise engineering and management.
- 5. have been exposed to a range of activities that will enable them to sustain professional and personal growth through life-long learning.

2.4 INTENDED LEARNING OUTCOMES (ILOs) OF THE PROGRAMME

ILOs of LEM award

These are aligned with the programme aims specified in above.

- 1. To be versed in the activities of various logistics disciplines and in particular, engineering and management, so that graduates are able to appreciate and interact with other professionals during execution of their duties recognising the necessity of lifelong learning. *Category A*
- 2. To be able to formulate problems, recognise areas in an organisation where improvements are necessary devising and implementing strategies to produce solutions. *Category A*
- 3. To be able to apply knowledge, procedures (principles, techniques and methods), and, where appropriate, mathematics and science, to logistics problems, and to have sufficient understanding of their limitations so that they can select the most appropriate for a particular situation. *Category A*
- 4. To be able to design and manage systems of business, logistics and technology, and so to prepare them for the logistics industry. *Category A and Category B*
- 5. To be able to effectively communicate (oral, written, graphical and numerate), so as to enable them to function on multidisciplinary teams and as individuals where cooperation from others is necessary. *Category B*
- 6. To be aware of the responsibilities and ethics of logistics engineers and professionals in the modern world and possess a realisation of the constraints imposed on the enterprises by economic and environmental factors. *Category B*
- 7. To be able to understand the social, managerial and economic aspects of logistics businesses, between Hong Kong and Mainland China. *Category A and Category B*
- 8. To possess the ability to engage in lifelong learning for continuous career development and personal growth. *Category A and Category B*

UNIVERSITY

MISSIONS

AND

THE

ILOs of EEM award

On completion of the programme, students will:

- 1. be versed in the activities of typical modern enterprises and comprehend the essence of enterprise engineering with business management for efficient operation of enterprises to sustain competitiveness in attaining organisational goals and objectives in the modern industrial and business environment. *Category A*
- 2. be capable of formulating problems in enterprise engineering with management and applying the knowledge and procedures to devise and implement strategies and courses of actions aimed at producing solutions in modern enterprises while understanding their limitations, and the effects and constraints of economic and other environmental factors. *Category A*
- 3. be able to apply entrepreneurial skills in identifying, capturing and managing industrial and business opportunities. *Category A*
- 4. have gained some experience that will enable them to apply their knowledge to solve problems of the type and, eventually, of the complexity that may be encountered in practice. Category A, B
- 5. be able to work effectively as individuals using their own initiatives, and as members of teams. *Category A, B*
- 6. be able to effectively communicate (oral, written, graphical and numerate) with people where understanding and cooperation from others is necessary. *Category A, B*
- 7. be aware of the social responsibilities and the ethics of being a professional in practicing enterprise engineering and management in the modern world. *Category A, B*
- 8. be capable to engage in lifelong learning for continuous career development and personal growth. *Category A, B*
- * Category A: Professional/Academic knowledge and skills, and Category B: Attributes for all-roundedness.

2.6 INSTITUTIONAL LEARNING OUTCOMES

PolyU is committed to nurturing competent professionals who are also critical thinkers, effective communicators, innovative problem solvers, lifelong learners, ethical leaders and socially responsible global citizens. The institutional learning outcomes for these attributes are provided as follows:

- 1. **Competent professional**: Graduates should be able to integrate and to apply in-depth discipline knowledge and specialised skills that are fundamental to functioning effectively as an entry-level professional (professional competence); understand the global trends and opportunities related to their professions (global outlook); and demonstrate entrepreneurial spirit and skills in their work, including the discovery and use of opportunities, and experimentation and novel ideas (entrepreneurship).
- 2. **Critical thinker**: Graduates should be able to examine and critique the validity of information, arguments, and different viewpoints, and reach a sound judgment on the basis of credible evidence and logical reasoning.
- 3. **Effective communicator**: Graduates should be able to comprehend and communicate effectively in English and Chinese, where appropriate, orally and in writing, in professional and day-today contexts.
- 4. **Innovative problem solver**: Graduates should be able to identify and define problems in professional and daily contexts, and produce innovative solutions to the problems.
- 5. **Lifelong learner**: Graduates should be able to recognise the need for continual learning and self-improvement, and be able to plan, manage and evaluate their own learning in pursuit of self-determined development goals.
- 6. Ethical leader: Graduates should have an understanding of leadership and be prepared to serve as a leader and a team player (leadership and teamwork); demonstrate self-

leadership and psychosocial competence in pursuing personal and professional development (intrapersonal competence); be capable of building and maintaining relationship and resolving conflicts in group work situations (interpersonal competence); demonstrate ethical reasoning in professional and day-to-day contexts (ethical reasoning).

7. Socially responsible global citizen: Graduates should have the capacity for understanding different cultures and social development needs in the local, national and global contexts (interest in culture and social development); and accept their responsibilities as professionals and citizens to society, their own nation and the world (social, national, and global responsibility).

2.8 COMPARISON TABLE BETWEEN THE STATED INTENDED LEARNING OUTCOMES (ILOS) OF THE LEM PROGRAMME AND THE HKIE REQUIRED OUTCOMES

HKIE Criteria	HKIE Required Outcomes	ILOs of the LEM Award
а	An ability to apply knowledge of mathematics, science, and engineering appropriate to the degree discipline	1
b	An ability to design and conduct experiments, as well as to analyse and interpret data	2, 4
c	An ability to design a system, component or process to meet desired needs within realistic constraints, such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability	3, 4
d	An ability to function on multidisciplinary teams	2
e	An ability to identify, formulate, and solve engineering problems	2
f	An ability to understand of professional and ethical responsibility	6
g	An ability to communicate effectively	5
h	An ability to understand the impact of engineering solutions in a global and societal context, especially the importance of health, safety and environmental considerations to both workers and the general public	6, 7
i	An ability to stay abreast of contemporary issues	7, 8
j	An ability to recognize the need for, and to engage in life- long learning	8
k	An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice appropriate to the degree discipline	1, 4
1	An ability to use the computer/IT tools relevant to the discipline with an understanding of their processes and limitations	3

2.10 FEEDBACK PROCESS

The Departmental Undergraduate Programme Committee and the Programme Leader are the elements of a feedback system in programme management. Their responsibilities include

SECTION 3 - ADMISSION TO THE PROGRAMME

FREQUENCY OF ADMISSION AND REGISTRATION

3.1 Students are admitted into the programme on an annual basis into Semester 1 of the academic year.

MINIMUM ENTRANCE REQUIREMENTS

- 3.2 Candidates applying with Hong Kong Diploma Secondary Education (HKDSE) or equivalent.
 - Level 3 in HKDSE English Language and Chinese Language; and
 - Level 2 in Mathematics, Liberal Studies; and
 - Level 3 in 2 Other Elective subjects [can include Extended Modules of Mathematics (M1/M2)]

The following Applied Learning Subjects are recognized for meeting the University entrance requirement and admission score calculation:

- Accounting in Practice;
- Applied Psychology;
- Aviation Studies;
- Business Data Analysis;
- Entrepreneurship for SME;
- Environmental Health Care;
- Food and Beverage Operations;
- Fundamental Health Care;
- Hotel Operations;
- Internet of Everything Application;
- Law Enforcement in Hong Kong;
- Marketing and Online Promotion;
- Marketing in Global Trade;
- Mobile and Online Apps Development;
- New Media Communication Strategies;
- Practical Psychology; and
- Purchasing and Merchandising.

CANDIDATES APPLYING WITH AN ASSOCIATE DEGREE OR HIGHER DIPLOMA

3.3 Candidates who hold an Associate Degree or Higher Diploma in Engineering, Business or related disciplines will be eligible to join the programme. The admission of such candidates will be at the discretion of the Programme Leader in conjunction with the Admissions Officer and the regulations regarding subject exemption and credit transfer arrangements stated in Section 6.8 - 6.18 will apply.

CANDIDATES APPLYING UNDER EXCEPTIONAL CIRCUMSTANCES

3.4 Candidates who hold equivalent qualifications to those stated above in 3.2 and 3.3 above are also eligible to join the programme.

PROGRAMME DECLARATION (NOT APPLICABLE TO SENIOR YEAR STUDENTS)

3.5 The BSc (Hons) Scheme in Logistics and Enterprise Engineering is composed of two awards: BSc (Hons) in Logistics Engineering with Management and BSc (Hons) in Enterprise Engineering with Management. Students admitted to the scheme have the freedom to make their programme choice without quota restrictions. However, they should submit a reply form to the Department to declare their target award no later than the end of semester one in their second year of study.

MINOR STUDY (NOT APPLICABLE TO SENIOR YEAR STUDENTS)

- 3.6 Minor study will be a free choice by students and not mandatory. Normally, this option to study for a Minor will not be applicable to students who are admitted to the advanced stage of a programme, nor to students who are admitted to an articulation degree programme. On the other hand, students admitted on the basis of advanced standing may be allowed to study for a Minor, if so decided by the programme-host Department. This decision will be made at the time of admission, based on the merits of each individual case. (In this respect, students who are approved for transfer of study, deferment of study, or zero credit enrolment will be given the same allowance as for students admitted on the basis of advanced standing.) Each student is allowed to take not more than one Minor. Students who opt for Minor study will be subject to the following regulations:-
 - A Minor programme is a collection of subjects totalling 18 credits with at least 50% (9 credits) of the subjects at Level 3 or above. The subjects under a Minor should have a coherent theme introducing students to a focused area of study.
 - (ii) Students interested in a Minor must submit their applications to and obtain approval from the Minor-offering Department, at the start of second year of study. Students should submit their applications to their Major Department, which will indicate its support or otherwise (since the taking of a Minor will increase the student's study load), before the Minor-offering Department makes a final decision on the application;
 - (iii) Students are expected to complete their approved Minor as part of their graduation requirements. Students who wish to withdraw from a Minor need to apply for approval officially from the Minor offering department, before the end of the add/drop period of the last Semester of study;
 - (iv) Students with approved Minor will be given a higher priority in taking the Minor subjects over the students who take the subjects as free-electives. 'Free electives' under the 4-year Ug degree programmes refers to any subjects (including CAR subjects) offered by the University, unless otherwise specified;
 - (v) Subject to approval by the Minor-offering Department, students may count up to 6 credits from their Major/General University Requirement (GUR) [including Language Communication Requirement (LCR) subjects at proficiency level] towards their chosen Minor. Nevertheless, students must take at least 6 credits from their chosen Minor programme in order to satisfy the residential requirement of their chosen Minor. In addition, to be eligible for the Major and Minor awards, the total number of credits taken by the students for their Major-Minor studies must not be lower than the credit requirement of the single discipline Major programme.
 - (vi) Only students with a Grade Point Average (GPA) of 2.5 or above can be considered for Minor study enrolment. The Minor-offering Department may set a quota (normally capped at 10 students or 20% of the Major intake quota) and additional admission requirements for their Minor; and

(vii) Students are required to obtain a GPA of at least 1.70 in order to satisfy the requirement for graduation with a Major plus a Minor.

A Minor-offering Department can admit students enrolled on Major programmes offered by other Departments and on its own Major programme(s). Enrolment of students from Major programmes outside the Department will be subject to the quota approved for the Minor although the Minor-offering Department can admit more students as long as the number does not exceed the approved quota by more than 20%, if there is a strong demand. As for admission of its own students, there is no limit on the number.

Notwithstanding 3.6 (iv) above, there is no guarantee that a clash-free timetable can be provided for all students who pursue Minor study. Minor-offering Departments will be responsible for ensuring that students enrolled on their Minors can take the requisite subjects and graduate within the normative study period.

DOUBLE MAJORS

- 3.7 Double Majors will provide an opportunity for the more capable students, who are interested in expanding their study beyond a single degree, to take a Second Major study. Students who opt for a double Major study will be subject to the following regulations:
 - (i) Completion of Double Majors requires more than the normative study period of 4/5 years and extra credits on self-financed basis (i.e. higher tuition fee). The total credit requirements of a Double Major will depend on the degree of commonality between the 2 Majors. Apart from the 30 credits of GUR subjects, up to 1/3 of the Discipline-Specific Requirements (DSR) of the First Major which are common to the Second Major can be double-counted towards the Second Major.
 - (ii) Students who wish to take a Second Major must obtain approval from the host Department of the first Major. They can then submit their applications to the second Major-offering department starting from their second year of study. Only students with a GPA of 3.0 above can be considered for admission to a Second Major, while Departments offering the Second Major can stipulate a higher GPA requirement if appropriate.
 - (iii) Students enrolled in a second Major will be given priority in taking second Major subjects over the students who take the subjects as free electives.
 - (iv) Students will be put on academic probation if they fail to obtain a GPA of 1.70 or above.
 - (v) Students are required to obtain an overall GPA of at least 1.70, in order to satisfy the requirement for graduation with Double Majors. They will not be allowed to graduate with one of the 2 Majors.
 - (vi) Students who wish to withdraw from a Second Major must obtain approval from the Department offering the Second Major, before the end of the add/drop period of the last Semester of study.
 - (vii) Students will not be allowed to withdraw from a First Major and continue with the Second Major only.

SELECTION PROCEDURE

3.8 The admission procedures will be coordinated by the Admissions Officer. Candidates applying with HKDSE or equivalent will be selected on the basis of their qualifications and academic achievement. Candidates applying without HKDSE or equivalent will be selected on the basis of academic achievement and by interview and/or admission test. However, preference may be given to industry sponsored candidates and those with relevant experience in industry.

SECTION 4 - CURRICULUM STRUCTURE

4.1 The curriculum structure are illustrated on progression pattern for normal students and senior year students on page 4-4 to 4-7 and page 4-8 to 4-10 respectively.

GENERAL UNIVERSITY REQUIREMENTS (GUR)

4.2 Normal students are required to complete 30 credits of GUR subjects which are language and communications requirements, freshman seminar, leadership and intra-personal development, service-learning, cluster areas requirement, China studies requirement and healthy lifestyle. It is further explained in Appendix I. Senior year students are required to complete 9 credits of GUR which cluster areas requirement, China studies requirement and service-learning. It is also further explained in Appendix II.

COMPULSORY AND ELECTIVE SUBJECTS

LEM and EEM awards

4.3 The programme has been planned with the primary aim of producing either graduates capable of fulfilling what we visualise as being their duties on employment and in large measure, the curriculum content has been designed deemed to be necessary to discharge this obligation. By virtue of the fact that LEM or EEM is by its nature, a broad discipline, most of the subjects in the curriculum are compulsory and provide a balance of subjects devoted to both areas. This, to some extent restricts the scope for flexibility of students to pursue subject of their own particular interest yet still being retained under the broad spectrum of this programme. However, some choice has been made available by including a number of elective subjects. There are 3 credits free electives which would normally be taken during Year 2 in LEM while there are 6 credits free electives which would normally be taken during Year 2 and 4 in EEM.

EEM award

4.4 *Integrative Studies in Enterprise Systems and Management (ISE4006)* are taken during Semester 1 of Year 4 in EEM. These activities provide the opportunity to students to learn and make use of the essential concepts, methods, tools and techniques learnt in the earlier part of the curriculum to develop a strategic business plan for exploring business opportunities. The teaching and learning emphasis is on developing an environment for students to acquire a mindset and attitude by learning through a guided framework of activities. Such activities are supported by the core studies of Year 1, Year 2 and Year 3 and the IC training that takes place in Year 2 and Year 4. It provides a setting where students can integrate and apply what they have learnt in this and other subjects to achieve the subject learning outcomes.

INDUSTRIAL CENTRE BASED TRAINING

- 4.5 Computing Tools in Resources Planning & Analysis (IC2129) is undertaken in the University's Industrial Centre in the semester 2 of Year 2. This is a 2-week training consisting modules with the specific aim of ensuring an adequate level of proficiency in practical computer skills applicable to their academic studies and in their later professional lives. Students will focus on using particular software packages. Using a "hands-on" approach, the course provides students with the opportunity to explore the basic concepts at the user level and to experience computer-aided statistical analysis and enterprise resource planning software package first hand.
- 4.6 Specially, the subject consists of the following modules:

- (i) Basic Computer-aided Statistical Analysis (TM3015);
- (ii) Fundamentals of Enterprise Resource Planning (TM3016).
- 4.7 Computing Tools in Resources Planning & Analysis (IC2129) will be <u>graded</u> at the time when an assessment is made. Only **ONE** aggregate grade is given for an academic year to sum up the performance of student in this subject for that year.
- 4.8 ERP Advanced (IC2126) which is a 1-week training, is taken during the semester 1 of Year 4. It aims to enable students to have hands-on practice on the operation of contemporary enterprise resource planning in the whole business environment. Assessment is made at the end of semester 1 of Year 4.
- 4.9 Integrated Project (IC3103) which is a 3-week training, is taken during the semester 1 and semester 2 of Year 2. It aims to enable students to work in teams with other disciplines to formulate, research and solve a problem through which students practice and integrate what they have learned in their study. Assessment is made at the end of summer term between Year 2 and 3.
- 4.10 The above listed credits are:
 - (i) <u>not</u> counted towards the Weighted GPA/Award GPA calculation which is used for considering the award classification;
 - (ii) <u>not</u> counted towards the number of credits needed for meeting the requirement of the award(s) but students must obtain a minimum Grade D to qualify for an award;
 - (iii) <u>not</u> counted for meeting the credit requirement for full-time status of students;
 - (iv) taken into account in the GPA calculation, which is computed at the end of every semester on the basis of a student's performance on all subjects taken since the start of their studies.

THE INDIVIDUAL PROJECT

- 4.11 The *Individual Project (ISE4008)* is carried out in the final year of the programme and is mostly industry-related. The project topic and supervisor will be chosen by the students towards the end of Year 3 so they can spend some time gathering information and undertake preliminary planning prior to the start of the final year of the programme. Students may also propose their project topic subject to approval by the supervisor. During their final year students are allocated one day per week for their project and normally spend at least one full day per week on this activity.
- 4.12 While the specific objectives to be met by the individual project may differ from one project to another, they should offer students the opportunities as specified below:
 - (i) to seek for themselves the information from which to make a critical assessment of an understanding of a phenomenon and/or of the procedures available to achieve a desired objective;
 - to be able to decide from the wealth of existing knowledge, that which is relevant to his particular undertaking thus to be able to select the knowledge or procedures most appropriate to his specific purpose or to make appropriate amendments to the procedure so as to make it applicable;

- to define one (or more) problem from a given situation, thereafter to decide which (if there are more than one) are to be pursued, to assign them relative priorities and to develop strategies by which the problems may be solved;
- (iv) to implement these strategies, to re-define each problem as more is learned of its true nature;
- (v) to work with time and financial constraints, to take decisions on the basis of incomplete information, to prepare, submit and defend a coherent, succinct, ordered report.

WORK INTEGRATED EDUCATION (WIE)

- 4.13 Work Integrated Education (WIE) is defined as a <u>structured</u> and <u>measurable</u> learning experience which takes place in an organisational context relevant to a student's future profession, or to the development of generic skills that will be valuable in that profession. It is included in the programme to enable students to obtain a better understanding of real-life work experience relevant to the discipline of studies they pursue as well as to further enhance their all-round development. Students must complete WIE before graduation.
- 4.14 WIE must be a cooperative venture between the PolyU Department and the work organization. In order to enhance the feasibility of placement arrangements, and to provide more flexibility to Departments so they can take account of the specific situations of individual industries, WIE is intended to be flexible. Examples of activity types that are regarded as satisfying the WIE requirement are given as follows:
 - (i) Summer placement (of normally 2-month duration) in a suitable organization participating in the Preferred Graduate Development Programme.
 - (ii) Any other placement in any suitable external organization for a specified period of time.
 - (iii) Any collection of community service programmes of an acceptable aggregate duration.
 - (iv) Any jobs found by the student himself in an external organization and deemed to be suitable by the Department and the Dean in meeting the requirement of WIE. Such jobs must be declared by the student in advance so that the Department can have an opportunity to assess its suitability.
 - (v) Relevant placement as student helpers in PolyU administrative departments and Industrial Centre.
 - (vi) Assisting in PolyU activities that have an external collaboration or service component such as, Innovation and Technology Fund projects, RAPRODs projects, high-level consultancy projects, collaborative research projects that we undertake with external organizations, jobs undertaken by the Industrial Centre as a service for an external organization.
 - (vii) Placement with the IAESTE (International Association for the Exchange of Students for Technical Experience) Programme in which the student is attached to a workplace abroad during the training.

Please also refer to the WIE Handbook published by the Careers and Placement Section of Student Affairs Office (SAO) available at https://www.polyu.edu.hk/sao/cps/wie/images/web_docs/WIE_Handbook_20200618.pdf.

- # General University Requirements (GUR) The pattern for GUR subjects are indicative only. Students may take these subjects according to their own schedule.
- * Students can take free electives offered by ISE or other departments.

@ Double Fulfilment of DSR and CAR

Some DSR subjects are also designated as CAR subjects under the four cluster areas. They are the same subjects designated with different subject codes. Upon passing them, you will fulfill the requirements of both DSR and CAR. However, credits will not be counted twice. For example, if you have taken MM2711, you have fulfilled the CAR B requirement and earned only 3 credits instead of 6 credits. So you may need to take other subjects to make up the total credit requirement of the award. The list of subjects that fulfill both DSR and CAR of LEM/EEM award are shown below:

DSR	CAR Subjects	Cluster Area	Subject Title
Subjects			
MM2711	MM2B05	CAR – B	Introduction to Marketing

4-8 PROGRESSION PATTERN OF THE CURRICULUM – FOR SENIOR YEAR STUDENTS

* Those students not meeting the equivalent standard of the Undergraduate Degree LCR (based on their previous studies in AD/HD programme and their academic performance) will be required to take degree LCR subjects on top of the normal curriculum requirement. Degree LCR subjects include

TWO English language subjects

- Practical English for University Studies (ELC1011) 3 credits
- English for University Studies (ELC1012/1013) 3 credits
- Advanced English for University Studies (ELC2014) 3 credits ONE Chinese language subject
- University Chinese (CLC1104C/P) 3 credits

Students are recommended to take these LCR subjects preferably in year one.

- # General University Requirements (GUR) The pattern for GUR subjects are indicative only. Students may take these subjects according to their own schedule.
- ~ Students can take free electives offered by ISE or other departments.

SECTION 5 - EXAMINATION AND ASSESSMENT

GENERAL ASSESSMENT REGULATIONS (GAR)

5.1 The University's General Assessment Regulations shall apply to the programmes. The specific assessment regulations are set out here, having been developed within the framework of the GAR.

ASSESSMENT METHODS

- 5.2 Students' performance in a subject can be assessed by continuous assessment and/or examinations, at the discretion of the individual subject offering Department. Where both continuous assessment and examinations are used, the weighting of each in the overall subject grade is clearly stated in Section 8 of this document. The subject offering Department can decide whether students are required to pass both the continuous assessment and examination components, or either components only, in order to obtain a subject pass, but this requirement (to pass both, or either, components) will be specified in Section 8 of this document. Learning outcome should be assessed by continuous assessment and/or examination appropriately, in line with the outcome-based approach.
- 5.3 Continuous assessment may include tests, assignments, projects, laboratory work, field exercises, presentations and other forms of classroom participation. Continuous Assessment assignments which involve group work should nevertheless include some individual components therein. The contribution made by each student in continuous assessment involving a group effort shall be determined and assessed separately, and this can result in different grades being awarded to students in the same group.
- 5.4 Assessment methods and parameters of subjects shall be determined by the subject offering Department.

GRADING

5.5 Assessment grades shall be awarded on a criterion-referenced basis. A student's overall performance in a subject shall be graded as follows:

Subject grade	Grade point	Short description	Elaboration on subject grading description
A+ A A-	4.3 4.0 3.7	Excellent	Demonstrates excellent achievement of intended subject learning outcomes by being able to skillfully use concepts and solve complex problems. Shows evidence of innovative and critical thinking in unfamiliar situations, and is able to express the synthesis or application of ideas in a logical and comprehensive manner.
B+ B B-	3.3 3.0 2.7	Good	Demonstrates good achievement of intended subject learning outcomes by being able to use appropriate concepts and solve problems. Shows the ability to analyse issues critically and make well-grounded judgements in familiar or standard situations, and is able to express the synthesis or application of ideas in a logical and comprehensive manner.

C+ C C-	2.3 2.0 1.7	Satisfactory	Demonstrates satisfactory achievement of intended subject learning outcomes by being able to solve relatively simple problems. Shows some capacity for analysis and making judgements in a variety of familiar and standard situations, and is able to express the synthesis or application of ideas in a manner that is generally logical but fragmented.
D+ D	1.3 1.0	Pass	Demonstrates marginal achievement of intended subject learning outcomes by being able to solve relatively simple problems. Can make basic comparisons, connections and judgments and express the ideas learnt in the subject, though there are frequent breakdowns in logic and clarity.
F	0.0	Fail	Demonstrates inadequate achievement of intended subject learning outcomes through a lack of knowledge and/or understanding of the subject matter. Evidence of analysis is often irrelevant or incomplete.

'F' is a subject failure grade, whilst all others ('D' to 'A+') are subject passing grades. No credit will be earned if a subject is failed.

Indicative descriptors for modifier grades

Main Grade (solid)	The student generally performed at this level, indicating mastery of the subject intended learning outcomes at this level.
+ (exemplary)	The student consistently performed at this level and exceeded the expectations of this level in some regards, but not enough to claim mastery at the next level.
- (marginal)	The student basically performed at this level, but the performance was inconsistent or fell slightly short in some regards.

Note: The above indicative descriptors for modifier grades are not applicable to the pass grades D and D+

5.6 At the end of a semester, a Grade Point Average (GPA) will be computed as follows, and based on the grade point of all the subjects:

$$GPA = \frac{\sum_{n} \text{Subject Grade Point x Subject Credit Value}}{\sum_{n} \text{Subject Credit Value}}$$

- where n = number of all subjects (inclusive of failed subjects) taken by the student up to and including the latest semester/term, but for subjects which have been retaken, only the grade point obtained in the final attempt will be included in the GPA calculation.
- 5.7 Exempted, ungraded and incomplete subjects, subjects for which credit transfer has been approved without any grade assigned[^], and subjects from which a student has been allowed to withdraw, i.e. those with the Grade "W" will be excluded from the GPA calculation. Subjects which have been given an "S" grade code i.e. absent from all assessment components, will be included in the GPA calculation and will be counted as "zero" grade point. The GPA is thus the unweighted cumulative average calculated for a student, for all relevant subjects taken from the start of the programme to a particular point of time. GPA is an indicator of overall performance, and ranges from 0.00 to 4.30 from 2020/21.

[^]Subjects taken in PolyU or elsewhere and with grades assigned, and for which credit transfer has been approved, will be included in the GPA calculation.

DIFFERENT TYPES OF GPA

- 5.8 GPA will be calculated for each Semester including the Summer Term. This <u>Semester GPA</u> will be used to determine students' eligibility to progress to the next Semester alongside with the 'cumulative GPA'. However, the Semester GPA calculated for the Summer Term will not be used for this purpose, unless the Summer Term study is mandatory for all students of the programme concerned and constitutes part of the graduation requirements.
- 5.9 The GPA calculated after the second Semester of the students' study is therefore a <u>'cumulative' GPA</u> of all the subjects taken so far by students, and without applying any level weighting.
- 5.10 Along with the 'cumulative' GPA, a <u>weighted GPA</u> will also be calculated, to give an indication to the Board of Examiners on the award classification which a student will likely get if he makes steady progress on his/her academic studies. GUR subjects will be included in the calculation of weighted GPA for all programmes.
- 5.11 When a student has satisfied the requirements for award, an <u>award GPA</u> will be calculated to determine his/her award classification. GUR subjects will be included in the calculation of award GPA for all programmes.
- 5.12 For students taking the Major/Minor study route, a separate GPA will be calculated for their Major and Minor programmes. The Major GPA will be used to determine his/her award classification, which will be so reflected on the award parchment. The Minor GPA can be used as a reference for Board of Examiners to moderate the award classification for the Major.

ASSESSMENT OF THE WORK INTEGRATED EDUCATION (WIE)

The Programme uses Engineering Faculty Guidelines for assessment of WIE. 5.13 WIE components will NOT be counted towards GPA calculation. Students are required to complete a minimum of 2 weeks/80 hours of full-time training or equivalent. WIE required in the form of Summer Placement or other training may take place in Hong Kong, Mainland China, or overseas. WIE activities may be organised through the Department, Careers and Placement Section (CPS) of the Student Affairs Office (SAO) or by the student's own initiative with advice from the WIE coordinator to ensure that they qualify for WIE on account of relevance, structure, and measurability. In such cases, assessment will be made using the The log book must be signed by the employer with a brief evaluation of the WIE log book. student, as appropriate. This is examined by the WIE coordinator to ensure that the WIE objectives have been achieved. The WIE coordinator may interview the student in making the evaluation.

PROGRESSION/ACADEMIC PROBATION/DEREGISTRATION

- 5.14 The Board of Examiners shall, at the end of each semester (except for Summer Term unless there are students who are eligible to graduate after completion of Summer Term subjects or the Summer Term study is mandatory for the programme), determine whether each student is:
 - (i) eligible for progression towards an award; or
 - (ii) eligible for an award; or
 - (iii) required to be de-registered from the programme.

When a student has a Grade Point Average (GPA) lower than 1.70, he/she will be put on academic probation in the following semester. Once when a student is able to pull his/her GPA up to 1.70 or above at the end of the semester, the status of "academic probation" will be lifted. The status of "academic probation" will be reflected in the examination result notification but not in transcript of studies.

- 5.15 A student will have 'progressing' status unless he/she falls within any one of the following categories which may be regarded as grounds for de-registration from the programme:
 - (i) the student has reached the final year of the normal period of registration for that programme, as specified in this document, unless approval has been given for extension; or
 - (ii) the student has reached the maximum number of retakes allowed for a failed compulsory subject; or
 - (iii) the student's GPA is lower than 1.70 for two consecutive semesters and his/her Semester GPA in the second semester is also lower than 1.70; or
 - (iv) the student's GPA is lower than 1.70 for three consecutive semesters.

When a student falls within any of the categories as stipulated above, except for category (i) with approval for extension, the Board of Examiners shall de-register the student from the programme without exception.

A student may be deregistered from the programme enrolled before the time frame specified in (ii) or (iii) above if his/her academic performance is poor to the extent that the Board of Examiners considers that there is not much of chance for him/her to attain a GPA of 1.70 at the end of the programme.

If the student is not satisfied with the de-registration decision of the Board of Examiners, he/she can lodge an appeal. All such appeal cases will be referred directly to Academic Appeals Committee (AAC) for final decision. Views of Faculties/Department will be sought and made available to AAC for reference.

UNIVERSITY GRADUATION REQUIREMENTS

For Normal Students

- 5.16 A student is eligible for award if he/she satisfies all the conditions listed below:
 - (i) Complete successfully an accumulation of 121 credits + 6 IC training credits for the award[#];
 - (ii) Earn a cumulative GPA of 1.70 or above at graduation;
 - (iii) Complete successfully the mandatory Work-Integrated Education (WIE) component;
 - (iv) Satisfy 30 credits of General University Requirements (GUR);

(a) Language and Communication Requirements [~]	9 credits
(b) Freshman Seminar	3 credits
(c) Leadership and Intra-Personal Development	3 credits
(d) Service-Learning	3 credits
(e) Cluster Areas Requirement (CAR)	12 credits
(f) China Studies Requirement	(3 of the 12 CAR credits)
(g) Healthy Lifestyle [@]	Non-credit bearing
	Total = 30 credits

[#] This minimum only applies to students who are admitted through the normal route.

- (v) Satisfy the residential requirement for at least 1/3 of the credits to be completed for the award he/she is currently enrolled in PolyU; and
- (vi) Satisfy any other requirements as specified in this document and as specified by the University.

For Senior Year Students

- 5.17 A student is eligible for award if he/she satisfies all the conditions listed below:
 - (i) Complete successfully an accumulation of 64 credits* + 6 IC training credits for the award;
 - (ii) Earn a cumulative GPA of 1.70 or above at graduation;
 - (iii) Complete successfully the mandatory Work-Integrated Education (WIE) component;
 - (iv) Satisfy the following GUR requirements;

(a) Cluster Areas Requirement (CAR)	6 credits
-------------------------------------	-----------

 $[\]sim$ Non-Chinese speakers and those students whose Chinese standards are at junior secondary level or below will by default be exempted from the DSR - Chinese and CAR - Chinese Reading and Writing requirements. However, this group of students would still be required to take one Chinese LCR subject to fulfil their Chinese LCR.

[@] Students admitted to the programmes as Senior Year Intakes are not required to take the Healthy Lifestyle Programme. Advanced Standing students are required to take the Healthy Lifestyle Programme (except for those who are HD/AD holders who follow the Senior/Articulation Degree programme GUR curriculum).

3 credits
Total = 9 credits

^{*} Those students not meeting the equivalent standard of the Undergraduate Degree LCR (based on their previous studies in AD/HD programme and their academic performance) will be required to take degree LCR subjects on top of the normal curriculum requirement. Non-Chinese speakers and those students whose Chinese standards are at junior secondary level or below will by default be exempted from the DSR - Chinese and CAR - Chinese Reading and Writing requirements. However, this group of students would still be required to take one Chinese LCR subject to fulfil their Chinese LCR.

- (v) Satisfy the residential requirement for at least 1/3 of the credits to be completed for the award he/she is currently enrolled in PolyU; and
- (vii) Satisfy any other requirements as specified in this document and as specified by the University.
- 5.18 There are subjects which are designed to fulfil the credit requirement of different types of subject. Students passing these subjects will be regarded as having fulfilled the credit requirements of the particular types of subject concerned. Nevertheless, the subject passed will only be counted once in fulfilling the credit requirements of the award, and the students will be required to take another subject in order to meet the total credit requirement of the programme concerned.
- 5.19 Remedial subjects are designed for new students who are in need of additional preparations in a particular subject area, and only identified students of a programme are required to take these subjects. These subjects should therefore be counted outside the regular credit requirement for award.
- 5.20 In addition, students may be required to take subjects that are designed to enhance their skills in particular subject areas to underpin their further advanced study in the discipline. These underpinning subjects could be of different subject areas (e.g. Mathematics, science subjects), and the number of credits each student is required to take in a particular underpinning subject area may vary according to the different academic backgrounds of the students.
- 5.21 Senior Year intakes admitted to the 4-year Undergraduate Degree programmes on the strength of the Associate Degree/Higher Diploma qualifications are required to complete at least 60 credits in order to be eligible for a Bachelor's degree. Exemption may be given from subjects already taken in the previous Associate Degree/Higher Diploma studies. In that case. students should take other electives (including free electives) instead to make up the total of 60 credits required. For students who are exceptionally admitted before 2017/18 on the basis of academic qualification(s) more advanced than Associate Degree/Higher Diploma¹, such as the advanced stage of a 4-year degree curriculum programme, Departments can continue to grant credit transfer as appropriate, so as to give recognition to the advanced study taken, and these students can take fewer than 60 credits for attaining the award. The proportion of these students should remain low. As from the 2017/18 intake cohort, all students admitted to an Articulation Degree or Senior Year curriculum, irrespective of the entry qualifications they held when applying for admission to the programmes, are required to complete at least 60 credits to be eligible for award.
- 5.22 Level-0 subjects and training subjects (including clinical/field training) will not be counted to fulfill free elective requirement for graduation purpose.

¹ The admission of students to UGC-funded Articulation Degree programmes and Senior Year intakes on the basis of qualification(s) more advanced than Associate Degree/Higher Diploma is subject to the conditions stipulated by UGC governing the UGC-funded Senior Year places.

5.23 A student is required to graduate as soon as he/she satisfies the graduation requirements as stipulated in 5.16 and 5.17 above. The student concerned is required to apply for graduation, in the semester in which he/she is able to fulfil all his/her graduation requirements, and after the add/drop period for that semester has ended.

STUDENTS TAKING THE MAJOR/MINOR OPTION

- 5.24 Students taking the Major/Minor option will be considered for an award when they have satisfied the requirements for both the Major and Minor studies (i.e. having a GPA of 1.70 or above) and have also submitted an application for graduation. If the 18 credits taken for the approved Minor study can meet the requirements for that Minor, the Major students may apply to graduate with a specific Minor, in addition to their Major. Otherwise, students will graduate with a Major only.
- 5.25 Subject to approval by the Minor-offering Department, students may count up to 6 credits from their Major/GUR [including Language Communication Requirements (LCR) subjects at proficiency level] towards their chosen Minor. Nevertheless, students must take at least 6 credits from their chosen Minor programme in order to satisfy the residential requirement of their chosen Minor. In addition, to be eligible for the Major and Minor awards, the total number of credits taken by the students for their Major-Minor studies must not be lower than the credit requirement of the single discipline Major programme.

STUDENTS TAKING THE DOUBLE MAJORS OPTION

5.26 Students are required to obtain an overall GPA of at least 1.70, in order to satisfy the requirement for graduation with Double Majors. They will not be allowed to graduate with one of the 2 Majors. The total credit requirement of Double Major will depend on the degree of commonality between the two Majors. Apart from the 30 credits if GUR subjects, up to 1/3 of the DSR of the first Major which are common to the second Major can be double-counted towards the second Major.

GUIDELINES FOR AWARD CLASSIFICATION

5.27 To help the Board of Examiners in arriving at award classification decisions, a weighted GPA will be computed for each student upon completion of the programme. The Weighted GPA will be computed as follows:

Weighted GPA =
$$\frac{\sum_{n} \text{Subject Grade Point x Subject Credit Value x W}_{i}}{\sum_{n} \text{Subject Credit Value x W}_{i}}$$

where Wi = weighting to be assigned according to the level of the subject

n = number of all subjects counted in GPA calculation as set out in paragraph 5.6, except those exclusions that any subjects passed after the graduation requirement has been met will not be taken into account of in the grade point calculation for award classification.

For calculating the weighted GPA (and award GPA) to determine the Honours classification of students who satisfy the graduation requirements of Bachelor's degree awards, a University-wide standard weighting will be applied to all subjects of the same level, with a weighting of $\underline{2}$ for Level 1 and 2 subjects, a weighting of $\underline{3}$ for Level 3 and 4 subjects. Same as for GPA, weighted GPA ranges from 0.00 to 4.30 from 2020/21.

- 5.28 The contribution of each subject towards the weighted GPA depends on the product of the credits assigned and the level weighting. The weighted GPA will be used as one of the factors to be considered by the Board of Examiners in the determination of the award classifications.
- 5.29 Any subjects passed after the graduation requirement has been met will <u>not</u> be taken into account of in the grade point calculation for award classification. However, if a student attempts more elective subjects (or optional subjects) than those required for graduation in or before the semester in which he/she becomes eligible for award, the elective subjects (or optional subjects) with a higher grade/contribution shall be included in the grade point calculation (i.e. the excessive subjects attempted with a lower grade/contribution, including failed subjects, will be excluded except for students who have indicated inclusion of specific free electives for fulfilment of award requirements).

STUDENTS TAKING THE MAJOR/MINOR STUDIES

- 5.30 For students who have completed a Major/Minor programme, a single classification will be awarded and their award classification will mainly be based on the "Major GPA", but it can be moderated by the Board of Examiners with reference to the "Minor GPA". For students who have completed a Major programme combined with free electives, their award classification will be determined by their "Major GPA" which includes grades obtained for the free electives, if appropriate.
- 5.31 "Major GPA" is derived based on all subjects of the Major programme, including those meeting the mandatory General University Requirements (GUR) and programme-specific language requirement, but not necessarily including the training credits.
- 5.32 "Minor GPA" is derived based on the 18 credits of specific Minor programme. "Minor GPA" is unweighted.
- 5.33 The "Major GPA" and the "Minor GPA" will be presented separately to the Board of Examiners for consideration. The guidelines for determining award classification applicable to programmes with Major/Minor studies.
- 5.34 Where a student has a high GPA for his/her Major but a lower GPA for his/her Minor, he/she will not be 'penalised' in respect of his/her award classification, which is attached to the Major. On the other hand, if a student has a lower GPA for his/her Major than his GPA for the Minor, the Board of Examiners may consider giving the student a higher award classification than with reference to his/her Major GPA.

STUDENTS TAKING THE DOUBLE MAJORS OPTION

5.35 The derivation of GPA for award classification for the First Major and Second Major (particularly on the counting of subjects common to both Majors) will be decided by the Department offering the Major programme. Students will be given two award parchments, one for each Major programme, which will be issued upon completion of both Majors. The honours classification of the two Major awards need not be identical.

CLASSIFICATION OF AWARDS

5.36 The following are guidelines for Board of Examiners' reference in determining award classifications:

Honours degrees	Guidelines
-----------------	------------

1st Class Honours	The student's performance/attainment is outstanding , and identifies him/her as exceptionally able in the field covered by the programme in question.
2nd Class Honours (Division 1)	The student has reached a standard of performance which is more than satisfactory but less than outstanding .
2nd Class Honours (Division 2)	The student has reached a standard of performance judged to be satisfactory, and clearly higher than the 'essential minimum' required for graduation.
Third Class Honours	The student has attained the 'essential minimum' required for graduation at a standard ranging from just adequate to just satisfactory.

- 5.37 Under exceptional circumstances, a student who has completed an Honours degree programme, but has not attained Honours standard, may be awarded a Pass-without-Honours degree. A Pass-without-Honours degree award will be recommended, when the student has demonstrated a level of final attainment which is below the 'essential minimum' required for graduation with Honours from the programme in question, but when he/she has nonetheless covered the prescribed work of the programmes in an adequate fashion, while failing to show sufficient evidence of the intellectual calibre expected of Honours degree graduates.
- 5.38 Students who have committed academic dishonesty or non-compliance with examination regulations will be subject to the penalty of the lowering of award classification by one level. For undergraduate students who should be awarded a Third class Honours degree, they will be downgraded to a Pass-without-Honours. The minimum of downgraded overall result will be kept at a Pass. In rare circumstances where both the Student Discipline Committee and Board of Examiners of a department consider that there are strong justifications showing the offence be less serious, the requirement for lowering the award classification can be waived.
- 5.39 The following are the award GPA ranges for determining award classifications:

Award Classification	Award GPA
1st Class Honours	3.60 to 4.30
2 nd Class Honours (Division 1)	3.00 to 3.59
2 nd Class Honours (Division 2)	2.40 to 2.99
Third Class Honours	1.70 to 2.39

5.40 Decisions by the Boards of Examiners on award classifications to be granted to each student on completion of the programme shall be ratified by the Faculty Board (of Examiners). For cases the decisions of which do not conform to the above indicative GPA range, they should be referred, by the Faculty Board (of Examiners), to the APRC for ratification.

VALIDITY OF CREDITS

5.41 The validity period of credits earned is eight years from the year of attainment, i.e. the year in which the subject is completed. Credits earned from previous studies should remain valid at the time when the student applies for credit transfer.

RETAKING OF SUBJECTS

- 5.42 Students may only retake a subject which they have failed (i.e. Grade F or U). Retaking of subjects is with the condition that the maximum study load of 21 credits per semester is not exceeded. The number of retakes of a subject should be restricted to two, i.e. a maximum of three attempts for each subject is allowed.
- 5.43 In cases where a student takes another subject to replace a failed elective subject, the fail grade will be taken into account in the calculation of the GPA, despite the passing of the replacement subject. Likewise, students who fail a Cluster Area Requirement (CAR) subject may need to take another subject from the same Cluster Area in order to fulfill this part of the GUR, since the original CAR subject may not be offered; in such cases, the fail grade for the first CAR subject will be taken into account in the calculation of the GPA, despite the passing of the second CAR subject.
- 5.44 Students need to submit a request to the Faculty Board for the second retake of a failed subject.
- 5.45 Students who have failed a compulsory subject after two retakes and have been de-registered can submit an appeal to the Academic Appeals Committee (AAC) for a third chance of retaking the subject.
- 5.46 In relation to 5.45 above, in case AAC does not approve further retaking of a failed compulsory subject or the taking of an equivalent subject with special approval from the Faculty, the student concerned would be de-registered and the decision of the AAC shall be final within the University.

ABSENCE FROM AN ASSESSMENT COMPONENT

- 5.47 If a student is unable to complete all the assessment components of a subject, due to illness or other circumstances which are beyond his/her control and considered by the subject offering department as legitimate, the Department will determine whether the student will have to complete a late assessment and, if so, by what means. This late assessment shall take place at the earliest opportunity, and normally before the commencement of the following academic year (except that for Summer Term, which may take place within 3 weeks after the finalisation of Summer Term results). If the late assessment cannot be completed before the commencement of the following academic year, the Faculty Board Chairman shall decide on an appropriate time for completion of the late assessment.
- 5.48 The student concerned is required to submit his/her application for late assessment in writing to the Head of Department offering the subject, with five working days from the date of the examination, together with any supporting documents. Approval of applications for late assessment and the means for such late assessments shall be given by the Head of Department offering the subject or the Subject Lecturer concerned, in consultation with the Programme Leader.

ASSESSMENT TO BE COMPLETED

5.49 For cases where students fail marginally in one of the components within a subject, the BoE can defer making a final decision until the students concerned have completed the necessary remedial work to the satisfaction of the subject examiner(s). The remedial work must not take the form of re-examination.

AEGROTAT AWARD

- 5.50 If a student is unable to complete the requirements of the programme in question the award, due to very serious illness, or other very special circumstances which are beyond his/her control, and are considered by the Board of Examiners as legitimate, the Faculty/School Board will determine whether the student will be granted aegrotat award. Aegrotat award will be granted under very exceptional circumstances.
- 5.51 A student who has been offered an aegrotat award shall have the right to choose either to accept such an award or request to be assessed on another occasion as stipulated by the Board of Examiners, the student's exercise of this option shall be irrevocable. The acceptance of an aegrotat award by a student shall disqualify him/her from any subsequent assessment for the same award. An aegrotat award shall normally not be classified, and the award parchment shall not state that it is an aegrotat award. However, the Board of Examiners may determine whether the award should be classified provided they have adequate information on the students' academic performance.

OTHER PARTICULAR CIRCUMSTANCES

5.52 A student's particular circumstances may influence the procedures for assessment but not the standard of performance expected in assessment.

RECORDING OF DISCIPLINARY ACTIONS IN STUDENTS' RECORDS

- 5.53 With effect from Semester One of 2015/16, disciplinary actions against students' misconducts will be recorded in students' records.
- 5.54 Students who are found guilty of academic dishonesty or non-compliance with examination regulations will be subject to the penalty of having the subject result concerned disqualified and be given a failure grade with a remark denoting 'Disqualification of result due to academic dishonesty/ non-compliance with examination regulations'. The remark will be shown in the students' record as well as the assessment result notification and transcript of studies, until their leaving the University.
- 5.55 Students who have committed disciplinary offences (covering both academic and non-academic related matters) will be put on 'disciplinary probation'. The status of 'disciplinary probation' will be shown in the students' record as well as the assessment result notification, transcript of studies and testimonial during the probation period, until their leaving the University. The disciplinary probation is normally one year unless otherwise decided by the Student Discipline Committee.
- 5.56 The University reserves the right to withhold the issuance of any certificate of study to a student/graduand who has unsettled matters with the University, or is subject to disciplinary action.

SECTION 6 - PROGRAMME OPERATION AND CONTROL

FREQUENCY OF SUBJECTS TO BE OFFERED

6.1 Subjects are normally offered once a year. There are however, several common subjects shared by other programmes in the PolyU which may be available in both Semester's 1 and 2. Subject to the availability of resources, the Department will attempt to offer as many subjects as possible in both semesters.

DAYTIME, EVENING AND SUMMER TEACHING

6.2 Most of the subjects listed in the programme will be offered in the daytime and evening. Usually, there will be no summer term teaching (with the exception of IC training at the Industrial Centre or LCR/CAR/SL subjects), subjects will only be offered in Semester's 1 and 2.

SUBJECT REGISTRATION AND WITHDRAWAL

6.3 In addition to programme registration, students need to register for the subjects at specified periods prior to the commencement of the semester. Students may apply for withdrawal of their registration on a subject after the add/drop period if they have a genuine need to do so. The application should be made to the relevant programme offering Department and will require the approval of both the subject lecturer and the Programme Leader concerned. Application submitted after the commencement of the examination period will not be considered. For approved applications of subject withdrawal, the tuition fee paid for the subject will be forfeited and the withdrawal status of the subject will be shown in the examination result notification and transcript of studies but will not be counted towards the calculation of GPA.

STUDY LOAD

- 6.4 For students following the progression pattern specified for their programme, they have to take the number of credits and subjects, as specified in this document, for each semester. Students cannot drop those subjects assigned by the Department unless prior approval has been given by the Department.
- 6.5 The normal study load is 15 credits in a semester for full-time study. The maximum study load to be taken by a student in a semester is 21 credits, unless exceptional approval is given by the Head of the programme offering Department. For such cases, students should be reminded that the study load approved should not be taken as grounds for academic appeal.
- 6.6 To help improve the academic performance of students on academic probation, these students will be required to take a reduced study load in the following semester (Summer Term excluded). The maximum number of credits to be taken by the students varies according to the policies of individual Departments and will be subject to the approval of the authorities concerned.
- 6.7 Students are not allowed to take zero subject in any semester, including the mandatory summer term as required by some programmes, unless they have obtained prior approval from the programme offering Department; otherwise they will be classified as having unofficially withdrawn from their programme. Students who have been approved for zero subject enrolment (i.e. taking zero subject in a semester) are allowed to retain their student status and

continue using campus facilities and library facilities. Any semesters in which students are allowed zero subjects will be counted towards the total period of registration.

SUBJECT EXEMPTION

6.8 Students may be exempted from taking any specified subjects, including mandatory General University Requirements (GUR) subjects, if they have successfully completed similar subjects previously in another programme or have demonstrated the level of proficiency/ability to the satisfaction of the subject offering Department. Subject exemption is normally decided by the subject offering Department. However, for applications which are submitted by students who have completed an approved student exchange programme, the subject exemption is to be decided by the programme offering Department in consultation with the subject offering Department. In case of disagreement between the programme offering Department and the subject offering Department, the two Faculty Deans/School Board Chairmen concerned will make a final decision jointly on the application. If students are exempted from taking a specified subject, the credits associated with the exempted subject will not be counted towards meeting the award requirements (except for exemptions granted at admission stage). It will therefore be necessary for the students to consult the programme offering Department and take another subject in order to satisfy the credit requirement for the award.

CREDIT TRANSFER

- 6.9 Students may be given credits for recognised previous studies including mandatory General University Requirements (GUR) subjects; and the credits will be counted towards meeting the requirements for award. Transferred credits may not normally be counted towards more than one award. The granting of credit transfer is a matter of academic judgment.
- 6.10 Credit transfer may be done with or without the grade being carried over; the former should normally be used when the credits were gained from PolyU. Credit transfer with the grade being carried over may be granted for subjects taken from outside the University, if deemed appropriate, and with due consideration to the academic equivalence of the subjects concerned and the comparability of the grading systems adopted by the University and the other approved institutions. Subject credit transfer is normally decided by the subject offering Department. However, for applications which are submitted by students who have completed an approved student exchange programme, the decision will be made by the programme offering Department in consultation with the subject offering Departments.
- 6.11 The validity period of credits previously earned is up to 8 years after the year of attainment.
- Normally, not more than 50% of the credit requirement for award may be transferable from 6.12 approved institutions outside the University. For transfer of credits from programmes offered by PolyU, normally not more than 67% of the credit requirement for award can be transferred. In cases where both types of credits are being transferred (i.e. from programmes offered by PolyU and from approved institutions outside the University), not more than 50% of the credit requirement for award may be transferred. The 50% and 67% ceiling is also applicable to Minor programme, i.e. credit transfer can be given for not more than 9 credits of a Minor programme if the previous credits were earned from approved institutions outside of the university; and not more than 12 credits of a Minor programme if the previous credits were earned from programmes offered by PolyU. For students admitted to an Articulation Degree or Senior Year curriculum which is already a reduced curriculum, they should not be given credit transfer for any required GUR subjects, and they must complete at least 60 credits to be eligible for award. Students exceptionally admitted to an Articulation Degree or Senior Year curriculum before 2017/18 based on qualification more advanced than Associate Degree/Higher Diploma may be given credit transfer for the required GUR subjects if they had

completed comparable components in their earlier studies. These students can take fewer than 60 credits for attaining the award. As from the 2017/18 intake cohort, all students admitted to an Articulation Degree or Senior Year curriculum, irrespective of the entry qualifications they held when applying for admission to the programmes, are required to complete at least 60 credits to be eligible for award.

- 6.13 If a student is waived from a particular stage of study on the basis of advanced qualifications held at the time of admission, the student concerned will be required to complete fewer credits for award. For these students, the 'deducted' credits at admission stage will be counted towards the maximum limit for credit transfer when students apply for further credit transfer after their admission. This also applies to students admitted to an Articulation Degree or Senior Year curriculum when they claim further credit transfer after admission.
- 6.14 Credit transfer can be applicable to credits earned by students through study at an overseas institution under an approved exchange programme. Students should, before they go abroad for the exchange programme, seek prior approval from the programme offering Department (who will consult the subject offering Departments as appropriate) on their study plan and credit transferability.
- 6.15 All credit transfers approved will take effect only in the semester for which they are approved. A student who applies for transfer of credits during the re-enrolment or the add/drop period of a particular semester will only be eligible for graduation at the end of that semester, even if the granting of credit transfer will immediately enable the student to satisfy the credit requirement for the award.
- 6.16 Regarding credit transfer for GUR subjects, the Programme Host Department is the approval authority at the time of admission to determine the number of GUR credits which an Advanced Standing student will be required to complete for the award concerned. Programme Host Departments should make reference to the mapping lists of GUR subjects, compiled by the Committee on General University Requirements (CoGUR), on the eligibility of the subjects which can qualify as GUR subjects. Applications for credit transfer of GUR subjects after admission will be considered, on a case-by-case basis, by the Subject Offering Department or Office of General University Requirements (OGUR)/Office of Service Learning (OSL), in consultation with the relevant Sub-committee(s) under CoGUR, as appropriate.
- 6.17 For credit transfer of retaken subjects, the grade attained in the last attempt should be taken in the case of credit transfer with grade being carried over. Students applying for credit transfer for a subject taken in other institutions are required to declare that the subject grade used for claiming credit transfer was attained in the last attempt of the subject in their previous studies. If a student fails in the last attempt of a retaken subject, no credit transfer should be granted, despite the fact that the student may have attained a pass grade for the subject in the earlier attempts.
- 6.18 Students should not be granted credit transfer for a subject which they have attempted and failed in their current study unless the subject was taken by the student as an exchange-out student in his current programme.

DEFERMENT OF STUDY

- 6.19 Students may apply for deferment of study if they have a genuine need to do so such as illness or posting to work outside Hong Kong. Approval from the Department is required. The deferment period will not count towards total period of registration.
- 6.20 Application for deferment of study from students who have not yet completed the first year of a full-time programme will only be considered in exceptional circumstances.

- 6.21 Where the period of deferment of study begins during a stage for which fees have been paid, no refund of such fees will be made.
- 6.22 Students who have been approved for deferment are not entitled to enjoy any campus facilities during the deferment period.

NORMAL DURATION FOR COMPLETION OF THE PROGRAMME

- 6.23 Students should complete the programme within the normal duration of the programme as specified in the Programme Requirement Document. Those who exceed the normal duration of the programme will be de-registered from the programme unless prior approval has been obtained from relevant authorities. The study period of a student shall exclude deferment granted for justifiable reasons, and the semester(s) when the student has been approved to undertake internship. Any semester in which the students are allowed to take zero subject will be counted towards their total period of registration.
- 6.24 Students who have been registered for the normal duration of the programme may request extension of their studies for up to one year with the approval of the relevant Heads of Department. Applications for extension of study period beyond one year and up to two years will require the approval from Faculty Board Chairman.
- 6.25 Students who have exceeded the normal duration of the programme for more than two years and have been de-registered can submit an appeal to the Academic Appeals Committee to request further extension. If the appeal fails, the student shall be de-registered.

DEPARTMENTAL UNDERGRADUATE PROGRAMME COMMITTEE

6.26 The Head of Department can decide on the composition of the Departmental Undergraduate Programme Committee. The Departmental Undergraduate Programme Committee will meet at least twice a year, and additionally at the request of the Chairman or of one-third of its membership or of the Chairman of the Senate. It will exercise the overall academic and operational responsibility for the programme and its development within defined policies, procedures and regulations.

The Committee will be specifically responsible for the following:

- (i) the effective conduct, organisation and development of the programme;
- (ii) stimulation of the development of teaching methods and programme materials, through Heads of Departments, Theme Group Leaders, and the Educational Development Centre, as appropriate;
- (iii) review of academic regulations, admission policy, assessment and examination methods;
- (iv) formal submissions to appropriate professional bodies, normally via the Head of the host Department and in accord with the University's established procedures;
- (v) the continuing critical review of the rationale, aims, intended learning outcomes (ILOs) and the alignment of teaching, learning and assessment with the ILOs, programme learning outcomes assessment and its results, and the improvement and development of the programme(s);
- (vi) definition and maintenance of the programme's academic standard;
- (vii) ensuring that the views of students and other key stakeholders on the programme are known and taken into account;

(viii) evaluation of the operation, health and progress of the programme as defined in the University's programme review procedures.

PROGRAMME LEADER

6.27 A Programme Leader will normally be a member of the programme offering Department and be appointed by the Head of Department. The appointment will be subject to the confirmation by the Chairman of the appropriate Faculty Board. In the unavoidable absence of a Programme Leader, an acting Programme Leader will be appointed by the Head of the programme offering Department. A Programme Leader is accountable in day-to-day operational terms to the Head of Department; and will normally hold office for a full cycle of the programme, but can then be considered for re-nomination. The Programme Leader will provide the academic and organizational leadership for the programme.

PROGRAMME EXECUTIVE GROUP

6.28 For programmes which are substantial, e.g. in scale, in the range of subjects or complexity, a small Programme Executive Group, would normally manage the day-to-day operation of the programme within the agreed scheme. The Group would operate informally, be organized by the Programme Leader and typically include staff with key programme responsibilities. For relatively simple programmes, the Programme Leaders would manage the day-to-day operation of the programmes.

THEME GROUP LEADERS

6.29 Theme Group Leaders are senior members of academic staff appointed by the Head of Department. They are responsible for the activities and development of subjects within a theme group which are part of the curricula of the programmes offered by the Department.

ACADEMIC ADVISOR

- 6.30 All full-time undergraduate students (including those admitted to Articulation Programmes or Senior Year Places) will be assigned to one full-time academic staff (normally at the Lecturer grade or above) from his/her Major Department who will act as his/her academic advisor throughout his/her course of study at PolyU.
- 6.31 The main responsibilities of the academic advisor will include:
 - Building rapport with the student, serving as a bridge that connects them to the Department,
 - Being accessible and available to students, and responding to their questions and concerns,
 - Helping students to consider and clarify their intellectual, professional and personal goals,
 - Helping students to develop an appropriate study plan (particular with regard to their Major), and assisting in their selection of appropriate courses to achieve their identified goals,
 - Clarifying to students academic regulations and requirements, particularly those relating to the Major,
 - Identifying students with special learning needs or early signs of learning problem, and referring/encouraging them to seek help or support.
- 6.32 Academic advisors are expected to keep in contact with their student advisees regularly (e.g., via emails or other means), and to have at least one face-to-face meeting with them, either individual or in small groups, during the academic year. Student advisees are expected to consult their respective advisors on their study plan before subject registration.

- 6.33 Effective academic advising requires an active participation of student advisees in the processes. It is important that students understand it is their responsibilities to:
 - Understand the academic regulations and requirements of their chosen programme of study and/or its Major, as well as the GUR requirements,
 - Actively obtain information, and seek out advisors and resources on a regular basis and as needed,
 - Take the final responsibility for making decisions and choices regarding their academic study based on the information and advice given.

STUDENT/STAFF CONSULTATIVE GROUP

- 6.34 The importance of assessing students' opinion on the organisation and running of the programme on a continual basis is recognised and formal arrangements for this purpose are in place. The Group should have equal numbers of students and staff, that student membership should include all years of study under the normal progression pattern and other major student groupings, and that staff membership should cover all the main subject areas and activities of the programme. A member of staff may chair the Group. The Group is to discuss any matters directly related to the programme, and to report or make recommendations, as deemed necessary, to the Departmental Undergraduate Programme Committee. Meetings are usually held once per semester.
- 6.35 It is important that students do not perceive meetings of the Group as the only or main channel for dealing with student problems and complaints accumulated since the last meeting. Such matters would be dealt with when they occurred, through the Programme Leader or other appropriate staff. This would allow meetings of the Group to be used for constructive discussion of the programme in general, of the demands of the programme on students, and of possible improvement.

SECTION 7 - PROGRAMME EVALUATION AND DEVELOPMENT

- 7.1 The programme evaluation and development procedures are intended to assess the:
 - (i) extent to which the aims and objectives are being met and what measures need to be taken to remedy any deficiencies identified, and
 - (ii) continuing relevance of the aims and subject objectives and the ways they need to be modified to take account of technological change and the development of Hong Kong's industries.
- 7.2 The programme evaluation procedures are conducted at two levels: firstly at the Programme Executive Group/Departmental Undergraduate Programme Committee level continuously through the year and secondly to the Departmental Undergraduate Programme Committee/Departmental Academic Advisor level at the end of each year. The first level is described in Section 6 of this document and the other below.
- 7.3 The Departmental Undergraduate Programme Committee holds its Annual Programme Review Meeting each year after the Board of Examiner has met as described in Section 5 of this document. The issues described in Section 6 are considered, particularly as revealed by the examination performance, and recommendations for action are made to remedy any deficiencies identified. Following the Annual Programme Review Meeting the Programme Leader submits the Annual Programme Review Report (which is encapsulated as part of the Annual Operation Plan) to the Engineering Faculty Board each year which, for the previous academic year,
 - (i) summarises the operation of the programme,
 - (ii) lists any modifications that are deemed necessary, and
 - (iii) makes proposals for substantial changes to the structure or content of the programme, or for changes with significant resource implications.
- 7.4 The Departmental Undergraduate Programme Committee adopts a policy of continuous improvement and is continuously evaluating the effectiveness and relevance of the Programme. This policy of continuous improvement includes soliciting the views of the Department's Advisory Committee, local industrialists, past graduates and the Departmental Academic Advisor.
- 7.5 The Programme is subject to an evaluation, normally every six years, as part of the PolyU's Departmental Review exercise. This is external to the Department and makes a critical appraisal of the standing, progress and future of all programmes that a department operates. The policy of continuous improvement as mentioned 7.4 attempts to render a major in-depth programme appraisal unnecessary prior to a Departmental Review.

SECTION 8 – SUBJECT SYLLABUSES AND PROJECTS

8.1 Syllabuses for all subjects and projects of the programme are listed in Table 8. Department of Industrial and Systems Engineering subjects are listed first, followed by subjects serviced by other departments. The subject coordinators for the ISE subjects will be updated regularly. Please access the departmental website <u>https://www.polyu.edu.hk/ise/current-students/programme-related-info/subject-syllabus</u> for the updated list.

TABLE 8 - SYLLABUS INDEX (Continued)

Subjects offered by Department of Industrial and Systems Engineering

Subject Code	ISE2001	
Subject Title	Introduction to Enterprise Computing	
Credit Value	3	
Level	2	
Pre-requisite/Co- requisite/Exclusion	Nil	
Objectives	This subject enables students to	
	1. understand the fundamentals and working knowledge in the application of enterprise computing in the running and operation of a company-wide and enterprise-wide business;	
	2. develop their ability to produce e-solutions.	
Intended Learning	Upon completion of the subject, students will be able to	
Outcomes	a. understand the basic concept of enterprise computing and how it supports company-wide and enterprise-wide business operation;	
	b. understand basic computing technologies;	
	c. apply computing technologies to implement e-solutions.	
Subject Synopsis/ Indicative Syllabus	 Introduction to Business Enterprise and Enterprise Computing From mainframe to network computing; Client/Server computing; Group- wise electronic messaging, document management systems, and corporate database systems; HTML; XML; VBScript; ASP; PHP; Application of company-wide and enterprise-wide computing 	
	2. <u>Development of Enterprise Applications</u>	
	Development of e-solutions based on applications software; Static and dynamic Webpage; Electronic publishing; Scripting language; Introduction to multimedia; Use of reporting tools; Web programming tools for e- solutions	
Teaching/Learning Methodology	A mixture of lectures, tutorials, in-class exercises, laboratory exercises, and a mini-project are used to deliver the topics. Lectures are conducted to enable students to understand the concepts and techniques of enterprise computing which are reinforced by in-class exercises. Practical problems are raised as a focal point for discussion in tutorial classes. Lab sessions and exercises are conducted to enable students to reflect on and apply the knowledge learned. The mini-project enables students to learn how to apply the knowledge to application-oriented projects through teamwork.	

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed			nes to

Subject Code	ISE246		
Subject Title	Introduction to Logistics Engineering		
Credit Value	3		
Level	2		
Pre-requisite/Co- requisite/Exclusion	Nil		
Objectives	This subject provides students with		
	1. the basic concepts and practices in logistics engineering;		
	2. the knowledge of common logistics problems and solution techniques;		
	3. the enabling technologies that are likely to drive logistics progress in the near future;		
	4. the concepts and emerging trends of e-commerce logistics business;		
	5. an opportunity to understand the role of Hong Kong as the logistics and transportation hub of South China and the Pearl River Delta region.		
Intended Learning	Upon completion of the subject, students will be able to		
Outcomes	a. appreciate logistics activities involved in running a logistics system and the required enabling technologies;		
	b. formulate strategic solutions applied in warehouse management in order to enhance productivity and accounting control issues;		
	c. identify and evaluate the role of logistics and transportation in today's e- commerce business;		
	d. understand the issues of transportation mode, customs clearance, intermodal operations, logistics parks, and cold chain in Hong Kong;		
	e. apply RFID equipment, standards, and related solutions on logistics operations in order to streamline the logistics workflow.		
Subject Synopsis/	1. <u>Introduction</u>		
Indicative Syllabus	Logistics from a historical perspective; Economic impact of logistics; Logistics engineering tool chest; Logistics as an integrating function		
	2. <u>Logistics Activities</u>		
	Customer service; Purchasing and sourcing; Demand forecasting; Facility location and layout; Inventory management; Material handling and material flow; Warehousing; Distribution networks; Transportation		

	systems overview							
	3. <u>Enabling Technologies</u>							
	Tracking technologies; Electronic connectivity and software; Reliability, maintainability, and supportability in logistics; Funding and justifying logistics activities; Logistics and the Internet							
	4. <u>Emerging and Growing</u>	<u>g Trends</u>						
	Global logistics conce industries; Current and distribution centers; Ho hub	l future logis	stics re	esearch	needs	s; E-fu	ılfillme	ent in
Teaching/Learning Methodology	A mixture of lectures, tutorials, laboratory exercises, and case studies are used to deliver the various topics in this subject, some of which are covered in a problem-based format, thereby enhancing the learning objectives. Others are covered through directed study in order to enhance the students' ability of "learning to learn."

	Assessment includes examination, and individual-based and group-based performance measurements. The examination is designed to measure students' depth of knowledge in the area of logistics engineering. The case study is designed to reflect students' understanding on the enabling technologies taught, warehouse management, and other logistics engineering issues. The laboratory exercises and individual assignments are designed to appraise students' recommendations in addressing specific issues related to logistics engineering.				lents' dy is ogies . Subject Code	ISE247
Subject Title	Fundamental of Enterprise Systems
Credit Value	3
Level	2
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject enables students to
	1. learn the business processes in an enterprise and how information is managed in an enterprise;
	2. understand the characteristics and components of different enterprise systems and how enterprise systems can improve the efficiency and effectiveness of business activities;
	3. understand the basic principles of enterprise modeling.
Intended Learning	Upon completion of this module, students will be able to
Outcomes	a. understand how information flows across enterprise systems and the business operations in an enterprise;
	b. analyze different enterprises and apply system concepts in both manufacturing and service industries;
	c. know the basic principle and components of enterprise modeling.
Subject Synopsis/	1. <u>Business Activities in Enterprise</u>
Indicative Syllabus	Development of modern organization and enterprise engineering - Basic functional areas of organizations and business activities, such as account and financial management, sales and marketing, customer services, manufacturing and production cycle, and human resource planning; Information flow and collaboration across different functional areas of an enterprise; Need for new business and technology professionals; Benefits of adopting enterprise applications; Enterprise engineering
	2. <u>Enterprise Information Systems and its Application to Enterprise</u> <u>Business</u>
	System concepts; Types and nature of enterprise systems; Classification by function and process; Managing information in an enterprise; Traditional classifications of enterprise information systems - Transaction processing system, such as systems for financial and accounting information, sales and marketing, human resource, manufacturing and production, enterprise resources planning, office automation (e.g., workflow system, GroupWare, and business processes management

	systems), knowledge work (e.g., CAD), decision support, management information, and executive information; Software vendor products							
	What is a business of enterprise mo modeling, scenar modeling, dialog and workflow mod	s process; Con odeling - En rio modeling and action n	ncept o tity m g, info	odeling ormatio	g, role n mo	e model deling,	ling, pro client/se	ocess erver
Teaching/Learning Methodology	The subject is delivered by a mixture of lectures, seminars, tutorials, case studies, and lab exercises. Lectures are conducted to initiate student exchange on concepts and techniques. Practical problems are raised as a focal point for discussion in tutorial classes. Seminars, case studies, and lab exercises, which are largely based on business and industrial experiences, are used to integrate these topics. These allow students to appreciate how various principles and technologies are interrelated and how they apply in real life situations. Quizzes are designed to enable students to periodically review their acquired knowledge, and consequently, to evaluate if the topics were understood.							
Assessment Methods in Alignment with Intended Learning	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed				to	
Outcomes			а	b	c			
	1. Lab Exercises	10%		~	~			
	2. Seminar Studies	15%		~	~			
	3. Case Studies	35%	~	~	~			
	4. Quizzes	40%	~		~			
	Total	100%						
	Continuous assessments consist of lab exercises, seminar reports, case studies, and quizzes. These are designed to help students achieve the intended learning outcomes. All components for assessment will require students to understand the basic principles and components of enterprise modeling. Lab exercises will require students to analyze and design an enterprise system by using computer-based tools. Seminar reports are designed to help students review and acquire a deeper understanding of the topics delivered during seminars. Case studies will require students to study a number of real-life enterprise systems and identify their benefits and impacts. Quizzes are designed to help students review, and assess the breadth and depth of their understanding on the concepts taught.

Subject Code	ISE3001
Subject Title	Operations Research I
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject will provide students with
	1. ability to understand the concepts and importance of Operations Research;
	2. knowledge of formulating mathematical models in day to day business operations;
	3. skills in improving management by applying Operations Research theories in real life;
	4. Operations Research models in decision makings.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. recognize the importance of Operations Research;
	b. build an Operations Research model from real-life problems;
	c. understand Operations Research theories and models and their applications to a variety of scenarios;
	d. apply computer tools to obtain optimal solutions from a mathematical model.
Subject Synopsis/	1. <u>Introduction</u>
Indicative Syllabus	Basic concepts in Operations Research and Mathematical Modeling.
	2. <u>Linear Programming</u>
	Concept in Linear Programming, Graphics method, the Simplex method.
	3. <u>The Assignment and the Transportation Problem</u>
	The model of the assignment problem, and the transportation problem. The transshipment problem.
	4. <u>Advanced Topics in Linear Programming</u>
	Duality, the Interior-Point Method.

	5. Integer Linear Progra	amming						
	Concepts in Integer Programming, the Branch-and-Bound Algorithm. The cutting plane method.							
	6. <u>Network and Dynam</u>	ic Programn	ning					
	Network and method	s. Dynamic	Progra	mming	and its	applic	ations.	
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, and case studies will be used to deliver the various topics in this subject. Some of them will be covered in a problem-based format which enhances the learning objectives. Others will be covered through directed study in order to enhance the students' ability of "learning to learn". Some case studies will be used to integrate these topics and thus demonstrate to students how the various techniques are interrelated and how they can be applied to real problems in industry.

Subject Code	ISE3002
Subject Title	Planning of Production and Service Systems
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject provides students with
	1. an understanding of the concepts of production and service systems;
	2. the ability to apply principles and techniques in the design, planning and control of these systems to optimize/make best use of resources in achieving their objectives.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. apply the systems concept for the design of production and service systems;
	b. make forecasts in the manufacturing and service sectors using selected quantitative and qualitative techniques;
	c. apply the principles and techniques for planning and control of the production and service systems to optimize/make best use of resources;
	d. understand the importance and function of inventory and to be able to apply selected techniques for its control and management under dependent and independent demand circumstances.
Subject Synopsis /	1. <u>The Systems Concept</u>
Indicative Syllabus	The transformation model of production systems. The boundary and attributes of a socio-technical production system. Effects of the environmental factors. Systems balance and sub-optimization. The need for systems integration and adaptation to environment.
	2. <u>Forecasting</u>
	Production demand management. Qualitative and quantitative methods in forecasting. Forecasting errors and control. Forecasting and its relationship to capacity planning.
	3. <u>Capacity Planning</u>
	Capacity measurement. Aggregate units. Manual and mathematical methods for aggregate planning. Master production scheduling.

	4. <u>Inventory Control a</u>	nd Material	Requiremen	nt Plannin	g (MRP)	
	Independent inventory control and management; Types of inventory; Continuous review and periodic review systems; Reorder level and order quantities, including quantity discounts; ABC analysis. Planning of dependent inventory; MRP concepts and principles; Lot sizing					
	5. <u>Operations Loading</u>	g and Schedu	ıling			
	Gantt charts for load operations scheduling	0	0	-	and algori	thms for
	6. <u>Just-in-time and Le</u>	ean Manufact	ure			
	Push and pull syster Set-up and changeo on inventory; Issues	ver times and	l their redu		-	
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, case studies and laboratories will be used to deliver the various topics in this subject to attain the intended learning outcomes. Some of which will be covered in a problem-based format where this enhances the learning outcomes. Others will be covered through directed study in order to enhance the students' ability of "learning to learn". Tutorials and laboratories are conducted as group activities so that students can discuss, practice and understand materials in the class. Case studies and simulation exercises will be provided to provoke students' further thinking about and integration of the factors related to real life problem solving in the discipline of studies.				d learning mat where h directed . Tutorials in discuss, simulation about and

Subject Code	ISE3005
Subject Title	Knowledge Management Systems and Applications
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject will equip students with
	1. the basic understanding of the role of knowledge in organizations in the new economy;
	2. the knowledge about the types and importance of knowledge processes and how enterprise applications and social software can be aligned to support these processes, both in a corporate and in a personal environment;
	3. the insights into how Knowledge Management Systems are being designed, deployed and accomplish the desired outcomes.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. define the role and importance of knowledge in support of decision making in organizations;
	b. outline common knowledge processes and align these processes with everyday work tasks;
	c. critically compare and contrast Knowledge Management Systems with common Enterprise Applications;
	d. outline how Knowledge Management Applications can be used to solve problems in various industries.
Subject Synopsis/	1. <u>Introduction to the knowledge-based enterprise in the new economy.</u>
Indicative Syllabus	Knowledge-intensive decision making. Linear Vs non-linear work as well as Physical Vs Manual work are compared while their respective proportion in today's work tasks are also discussed. The concept, skills and duties of a knowledge worker are critically examined.
	2. <u>Types of knowledge, knowledge processes and common approaches for</u> <u>KM</u>
	Tacit and explicit knowledge, knowledge processes, Nonaka Cycle of knowledge conversion i.e. SECI model, codification and personalization approaches to KM.

	3 Knowledge Manag	vement System	ns					
	 <u>Knowledge Management Systems</u> A range of enterprise applications is reviewed especially with respect to their support of various knowledge processes. Definition of a Knowledge Management System (KMS) is critically examined, as well the origin and evolution of these systems. Students will also learn about how to identify potential applications and plan the deployment of a KMS in an organization, fully understanding the common problems and constraints that occur in the deployment of such systems. Personal KM System and Social Software Personal KMS, in addition to Enterprise KMS, will also be discussed in the context of bottom-up knowledge sharing. Emergence of social media. Governance and security issues. Local and international case studies, tool demonstrations will be used. 							
Teaching/Learning Methodology	The delivery of this subject will be via lectures, lab session, scenarios, invited lecture(s), replays of interviews and tool demonstrations. Students will be asked to review specific cases and provide comments, assessments on various issues including, for example, appropriateness of a KMS to solve a problem, how to encourage the adoption of a KMS, appropriate content management processes and more.							
Assessment Methods in Alignment with Intended Learning	Specific assessment methods/tasks	% weighting		ntended subject learning outcomes to be assessed				
Outcomes			a	b	c	d		
	1. Individual assignment	15%	~	~				
	2. Mid-of-semester short quiz	15%	~	~	~			
	3. Workshop assignment	15%	~	~	~	~		
	4. Presentation of guided project	10%	~	~	~	~		
	5. Written report of guided project	20%	~	~	~	~		
	6. End-of-semester open book Test	25%	~	~	~	~		
	Total	100%						
	The individual assignment is designed to test a student's ability to conduct background research and write comprehensively about a given topic related to KMS. The workshop assignment serves to enhance a student's research							

	mindset and demonstrates by projecting, with substantiation, how the whole field of KMS would evolve in coming years. The mid-of-semester short quiz and end-of-semester open book test are designed to ascertain students' understanding and their ability to apply the concepts in given cases across a comprehensive set of topics covered in the subject. The Guided project is designed to test students' ability to apply what they have learnt in a real world environment. All components except the Guided project are individually assessed.				
Student Study Effort Expected	Class contact:				
	 Lectures (In-person & online) 	18 Hrs.			
	 Lab Sessions 	9 Hrs.			
	Tests	3 Hrs.			
	 Personal Learning Environment & Network (Bulletin Board) 	6 Hrs			
	Case Study Presentations	3 Hrs.			
	Other student study effort:				
	 Self-Study 	36 Hrs.			
	 Preparation for Assignment 	20 Hrs.			
	 Preparation for Tests 	20 Hrs.			
	Total student study effort	115 Hrs.

Subject Code	ISE318
Subject Title	Industrial Engineering Techniques and Methods
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil (but some basics of mathematics such as matrix and probability are preferable)
Objectives	This subject provides students with
	1. basic skills for analyzing and improving working methods, procedures and systems in the context of the work stations and a department, taking into account ergonomic considerations in order for them to carry out a project on work improvement in a company for the purpose of productivity improvement;
	2. skills in the use of learning curve, as well as a basic understanding of the techniques and concepts of Just-In-Time, Toyota Production System, and Lean Production, thereby allowing them to draft measures for efficiency improvement and waste reduction in industrial engineering;
	3. ability to use multi-criterion decision making method (Analytic Hierarchy Process) in order for them to draft industrial decision planning and evaluation (i.e. layout plan selection, human resource strategy, best available technology, sustainable manufacturing);
	4. working knowledge on the techniques for facilities layout and their interaction with materials handling system (if relevant), thereby enabling them to evaluate an existing layout and recommend improvements and/or to plan a new layout;
	5. basic skills of calculating cycle time, line efficiency, understanding the basic rules for work improvement, mastering the common recording techniques, systems flowchart, quality management tools, and basics for product development (design of goods and service, product life cycle and decision tree to product design).
Intended Learning Outcomes	Upon completion of the subject, students will be able to
	a. determine productivity and examine an existing work situation and conduct a work improvement program in order to identify low productivity in a manufacturing or service company;
	b. apply appropriate recording techniques, or to design new work methods and procedures, for a manufacturing or service company, and apply lean production methods;
	c. employ the multi-criterion decision making method (AHP) for industrial

	decision planning and evaluation;
	 d. master the total quality management tools, the basics of product development, analyze the results, and use line balancing theory for applications, and propose suggestions for improvement for industrial engineering;
	e. identify the objectives of layout planning in both manufacturing and service companies, evaluate its effectiveness, and apply layout planning techniques, recognizing their limitations when considering relevant constraints.
Subject Synopsis/	1. <u>Introduction</u>
Indicative Syllabus	Productivity; Causes of low productivity in organizations; Resources and outputs, their importance, brief history of industrial engineering techniques and methods, and how they are measured.
	2. <u>Work Improvement</u>
	Leaning Curves. Just in Time (JIT), Toyota Production System/Lean Production. Human resources strategy and job design. Industrial Decision planning and evaluation: Analytical Hierarchy Process (AHP) and multi- criterion decision-making. Layout Planning. Inter relationships among entities. Types of layout manufacturing and offices. Layout planning techniques. Line balancing. Procedure diagrams. Line balancing applications. Flow time, cycle time, line efficiency; Systems flowchart; Recording techniques. Work improvement, benefits, the logical approach, the Pareto Principles, identifying improvement areas in enterprise. Interview Personnel. Recording Techniques.
	3. <u>Quality Management and Product development</u>
	Quality management. Dimensions of quality. "Costs" of Quality. Total quality management tools. Seven Quality Control tools. ISO 9000 Series of Quality Standards. Design of goods and service. Product Life Cycle. Product Development (Quality Function Deployment). Decision tree to product design. Project management.
	4. <u>Layout Planning</u>
	Objectives, types of layout found in the manufacturing industry and the clerical sector; Systematic layout planning, as applied to manufacturing and clerical work; Introduction to the design of flowlines in manufacturing; Line balancing; Techniques; Efficiency of assembly lines; Balance loss.
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, and case studies are used to deliver the various topics in this subject, some of which are covered in a problem-based format, as these can enhance the learning objectives. Others are covered through directed study in order to enhance the students' ability of "learning to learn." Some case studies, largely based on consultancy experience, are used to integrate the topics, thus demonstrating to students how the various techniques are interrelated and how they can be applied in real work situations.

Assessment Methods in	Specific Assessment	%		ed subje ssessed	ct learni	ng out	comes
Alignment with Intended Learning	Methods/Tasks	Weighting	a	b	c	d	e
Outcomes	1. Continuous Assessment (Two Combined Case Studies, each comprising 20% each)	40%		~	~	~	~
	2. Examination (Open Book)	60%	~	~	~	~	~
	Total	100%					
	Continuous assessment comprises case studies with individual and group components. <u>Note</u> : Questions for the assessment of Intended Learning Outcomes (ILOs) may vary from year to year in terms of whether they are by Continuous Assessment or by Examination. However, all ILOs are covered each year. Moreover, all assessment components require students to apply what they learned to realistic work applications.

Subject Title	Technology and Applications of Electronic Business Systems
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject will provide students with
	1. the opportunity to understand and evaluate the basic design and architecture of electronic business systems;
	2. awareness of the latest electronic business system applications in the manufacturing and service industry;
	3. opportunity to evaluate the contemporary application of electronic business systems;
	4. concepts and applications related to network and web security.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. apply the design techniques to the development of architecture of electronic business systems;
	b. identify, examine, and evaluate the application of electronic business systems in the manufacturing and service industry;
	c. analyze and evaluate the contemporary application of electronic business systems in the context of the manufacturing and service industry;
	d. select an appropriate type of electronic business system and apply it to the relevant work context of the manufacturing and service industry.
Subject Synopsis/	The syllabus consists of the following topics:
Indicative Syllabus	1. Design and Architecture of Electronic Business Systems
	System development and analysis; Supply chain network and business models; Web-based technology, mobile technology, database technology, enterprise portals, network and web security, and business intelligence in the support of electronic business
	2. <u>Application of Electronic Business Systems in the Manufacturing and</u> <u>Service Sector</u>
	Applications in workflow management, production planning and inventory control, electronic procurement and trading, and others

8-26	

Teaching/Learning Methodology	A combination of lectures, case studies, and projects with the support of laboratory work is used to deliver the various topics in this subject. Students carry out the practical work in the Microsoft Enterprise Systems Center. Some topics are covered in a case-based format to enhance learning experience, whereas others are covered through directed study to cultivate self-learning. Case studies are used to demonstrate how the various techniques are interrelated and how they are deployed in an actual environment.

Subject Title	Packaging and Storage Technology
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject aims to enable students to
	1. appreciate the contemporary issues faced by packaging professionals in generating an appropriate package design in the product design and development phase;
	2. understand the working principles of key packaging materials and processes needed to provide a workable packaging solution to meet logistics and regulatory requirements;
	3. become competent in identifying the technological, economic, and societal factors that underline the selection of appropriate packaging materials, processes, and storage methods for specific products.
Intended Learning Outcomes	Upon completion of the subject, students will be able to
Outcomes	a. define the packaging requirements for a given product within an overall package design and development framework;
	b. select an appropriate type of packaging material and testing method to satisfy a given set of logistics functions;
	c. recognize the shelf-life limiting factors for foods and identify appropriate packaging and storage techniques to prolong the shelf-life of common food;
	d. define the design requirements for packing decoration and choosing an appropriate printing process for a given package.
Subject Synopsis/	1. Logistics Functions of Packaging
Indicative Syllabus	Types of packaging; Impact of packaging on costs and other logistics activities; Packaging terminology; Packaging materials; Characteristics of products that influence packaging selection; Packaging design considerations; Package printing and decorating; Management and recycling of packaging waste
	2. <u>Plastics and Glass-based Packaging</u>
	Packaging films; Extrusion and thermoforming; Injection and blow molding; Packaging adhesives; Glass container

Subject Title	Logistics Facility Design
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject provides students with
	1. ability to conduct analytical investigations on facility design issues while considering both efficiency and effectiveness;
	2. understanding of integration and simple monitoring devices in facility design.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. design/select appropriate facilities to facilitate material handling in logistics operations;
	b. apply sensors, actuators, robotics, and integration techniques in handling automation projects related to development of logistics facilities;
	c. determine how to develop a strategic framework for facility location, including the use of a suitable approach to formulate an efficient facility layout, addressing warehousing issues and understanding inventory models;
Subject Synopsis/	1. <u>Material Handling Device Selection and Design</u>
Indicative Syllabus	Introduction to material handling facilities: truck, crane and hoist, forklift, conveyer system, automated guided vehicle, tote pan, box, case, and pallet; Present value and capital recovery factor; Equipment selection and the implications of pallet standards; Simple and close-loop conveyor systems and automated guided vehicle planning considerations
	2. <u>System Control and Automation</u>
	Applications of RFID, RFID basic setup, and introduction to precise asset location; Utilization of sensors and actuators in automation and simple graphical programming; Introduction to automatic system control and integration; Robotics Applications
	3. <u>Warehouse Design</u>
	Warehouse layout design, honeycomb loss, storage assignment, and basic order picking policies; Introduction to automated storage and retrieval system construction modules; Introduction to probabilistic inventory

Subject Title	Enterprise Systems Modeling and Design
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject aims to enable students to
	1. have fundamental concepts of enterprises systems and modeling;
	2. understand various methods in modeling enterprise systems;
	3. apply basic system design methods;
	4. analyze and evaluate an enterprise system with reference to the predefined specification.
Intended Learning Outcomes	 Upon completion of this subject, students will be able to a. demonstrate good understanding on the fundamental concepts of enterprises systems and modeling; b. understand the processes and logic of enterprise modeling; c. identify and apply the appropriate methods in enterprise modeling; d. perform system analysis to justify the feasibility of an enterprise system.
Subject Synopsis/ Indicative Syllabus	 Principles of Enterprise Modeling Fundamentals of enterprise systems, and process modeling; Various types modeling in enterprise systems: Entity modeling; Role modeling; Process modeling, Workflow modeling etc. Enterprise modeling approaches: Business process modeling. System Modeling Methods Process modeling – e.g. Entity-relationship diagrams (ERD); Data flow diagram (DFD); State transition diagram (STD); Modeling tools - Object modeling and Rapid application development using CASE tools, etc.

	Continuous assessments consist of individual assignments, lab exercises or in class tutorial exercises, project, and tests are adopted. In-class exercises and assignments require students to reflect and apply the knowledge learnt from the lectures. Group Project requires students to apply the knowledge in real-life case of enterprise system. Tests are used to offer the objective assessments on students' understanding on the topics.						oply the to apply

Subject Code	ISE376
Subject Title	Entrepreneurship and Innovation
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	The objectives of the subject are to enable the students to
	1. gain an overview of the concept of entrepreneurship and entrepreneurship strategies;
	2. develop an awareness of the sources/processes of innovation;
	3. develop the ability to analyze innovative business.
Intended Learning Outcomes	Upon completion of the subject, students will be able to
Outcomes	a. understand entrepreneurship strategies in which innovation is an important part of business and corporate strategy;
	b. recognize various types of innovations and their processes;
	c. apply the techniques involved in assessing corporate ventures;
	d. evaluate the management of innovative business development or processes from a strategic and contemporary viewpoint.
Subject Synopsis/	Entrepreneurship and Industry Analysis
Indicative Syllabus	1. <u>Overview of Entrepreneurship</u>
	This provides the fundamental concept of entrepreneurship and relevant issues.
	2. <u>Understanding Industry Context and Entrepreneurship Strategies</u>
	This details the approaches to justify the industry context.
	This introduces the various strategies involved in the business development process.
	Innovation and Business Development
	3. <u>Introduction of Innovation Types</u>
	Innovation styles and approaches are discussed.

	4. <u>Implementation of</u>	Innovation						
	This discusses the	approaches to	o integr	ate inn	ovatior	n in entr	eprene	urship.
Teaching/Learning Methodology	The teaching/learning approach combines lectures, cases, and in-class activities.							
	Each session includes a the theme of the session		reading	s (requ	ired/oj	ptional)	pertain	ning to
		Lectures: Lectures are conducted to give students an overview of the fundamental concepts and theories.						
	Case studies are given knowledge and interacti				the ap	oplicatio	on of 1	learned

Subject Title	Enterprise Resources Planning					
Credit Value	3					
Level	4					
Pre-requisite/Co- requisite/Exclusion	Nil					
Objectives	This subject will provide students with					
	1. the fundamental principles of Enterprise Resources Planning (ERP);					
	2. the major components in an ERP system and the relationship between these components; Selection, Evaluation and Implementation of ERP;					
	3. the basic skills in developing corporate strategies.					
Intended Learning	Upon completion of the subject, students will be able to					
Outcomes	a. identify major components in an ERP system and conduct feasibility of ERP;					
	b. develop effective corporate strategies and to implement these strategies using ERP.					
Subject Synopsis/	The topics of this syllabus are:					
Indicative Syllabus	1. <u>Enterprise Systems</u>					
	Strategic inventory management; collaborative planning; forecasting; replenishment.					
	2. <u>Enterprise Strategy</u>					
	Enterprise and corporate strategies; strategic management building; implementation techniques.					
	3. <u>Enterprise Resources Planning (ERP) Solutions</u>					
	Distribution items and purchased material, manufactured items, sales and operation planning, sales order processing, warehouse management, production order processing, multisite operations.					
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, seminars, and case studies will be used to illustrate and teach the fundamental principles of Enterprise Resources Planning (ERP). The use of a typical enterprise system (such as Microsoft Dynamics) and an enterprise simulator will enable students to solve problems in a simulated enterprise environment. Such environment enables students to develop effective corporate strategies and to implement these strategies in an organizational context. It also enables to improve students' strategic

Subject Title	Integrative Studies in Enterprise Systems and Management
Credit Value	3
Level	4
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject will provide students with
	1. the ability to work at their own pace, in groups as well as individually;
	2. the understanding of the importance of teamwork and the complexity of a modern enterprise;
	3. the knowledge to develop business plans/proposals in implementing an enterprise project;
	4. the skills to design, develop and evaluate a prototype of enterprise portal.
Intended Learning Outcomes	Upon completion of the subject, students will be able to
Outcomes	a. learn various skills and practical knowledge at their own pace;
	b. start-up of a business with entrepreneurial business skills;
	c. build an enterprise portal with needed features to show the business idea;
	d. critique the quality of work of their peer group.
Subject Synopsis/	1. <u>Company Formation</u>
Indicative Syllabus	Company registration, role play to be company secretary and directors,
	2. <u>Business Plan Development</u>
	Apply brainstorming techniques to develop innovative business ideas, formulate company strategies using SWOT analysis, analyse market and competitive environments using PEST and Porter's Five Forces analysis, formulate marketing strategies according to different stage of product life cycle, designing marketing program, and financial and operation plans, financial and risk analyses.
	3. <u>Business Plan Write-up and Competition</u>
	Business plan writing, application prototype, portal development, design, plan and control of an enterprise, business plan competition and interview.

Teaching/Learning Methodology	and monitor the progres approach is recommend engaging students to le	ss of the busin ded for adopt arn the essen d student-int	ject, the project tutors provide guidance ness projects. The project-based learning tion. It is a systematic teaching method tial knowledge and life-enhancing skills fluenced inquiry process, which are problems.					
	Before commencing this project, students are required to form a company with 5 to 7 students and do the company registration, attend briefing and seminar sessions to ensure its smooth running. In particular, one of these will include business plan writing and portal development. This will contain topics that will assist students to plan, schedule and control the various activities involved so as to effectively complete their work within the time frame allowed. In addition, other topic areas will be covered including, the awareness of various engineering options, strategic management skills, creativity and idea generation, and the use of the IT skills that they will have learnt in Year 1 of the programme.							seminar include hat will lved so ved. In various d idea

Subject Code	ISE4008					
Subject Title	Individual Project					
Credit Value	6					
Level	4					
Pre-requisite/Co- requisite/Exclusion	Nil					
Objectives	While the specific objectives of individual projects may vary from one project to another, students are expected to develop the following generic skills through the learning experience of working on an individual project under the guidance of a supervisor:					
	1. Skills to obtain information needed to formulate a problem, and to devise and implement strategies that will produce a solution.					
	2. Skills to apply knowledge, procedures (principles, techniques and methods), and to understand their limitations in problem identification, data analysis and formulation of logical observations and or solutions.					
	3. Skills to work effectively as an individual using one's own initiative and within constraints.					
	4. Skills to prepare, present, and defend a project report effectively.					
Intended Learning	Upon completion of the subject, students will be able to					
Outcomes	a. understand the background, as well as define the objectives (time, cost and technical requirements) and deliverables of a project that address a significant issue relevant to the award pursued by the student;					
	b. formulate strategies and methodologies to achieve the project objectives within the constraints of a given situation;					
	c. select, apply, integrate and, ideally, extend available knowledge, procedures and tools to collect data in performing the needed investigational or design work, and to draw conclusions that address the project objectives;					
	d. communicate effectively with stakeholders of the project outputs and work independently to produce, within applicable constraints, optimal solutions that address the project objectives;					
	e. prepare, present, and defend a clear, coherent and succinct report.					

Teaching/Learning Methodology	Throughout the duration of the project, the supervisor provides guidance and monitors the progress of the project.
<i>6</i> ,	The progression of the project typically follows the following indicative stages:
	Project Definition – in this stage, the student will work in consultation with the project supervisor to draw up a project plan addressing issues such as:
	• Background of the project
	• Aims and objectives
	• Deliverables
	• Project scope and applicable constraints
	• Coverage of literature review
	• Methodologies to be considered
	• Project schedule
	Project Execution – This is the major part of the project. After the project requirements are defined, the student will work independently under the guidance of the project supervisor towards the achievement of the project objectives and produce the project deliverables in a given situation. On his own initiative, the student will meet the project supervisor regularly to review progress and discuss issues of the project. In this stage, the student should demonstrate:
	Adherence to the schedule
	• Initiatives to acquire and synthesize knowledge, collect the needed data, and solve problems
	• Tenacity, resourcefulness, critical thinking and creativity in achieving project objectives
	• Systematic documentation of data, design and results throughout the process
	The student is required to maintain a project workbook that records the meetings held and summarizes the work performed in this stage.
	Project Report – On completion of the project, the student will disseminate the results to his peers and examiners to review. The major deliverables of this stage are:
	• A written project report (softcopy and hardcopy)
	• An oral presentation
	• Taking questions and comments in a question-and-answer session
	The proposed project defined by the student and/or the supervisor should be in an area relevant to the discipline. The project will be used as a vehicle for the student to integrate his/her knowledge gained in the programme. In order to achieve the subject learning outcomes, it is not appropriate to have projects mainly focused on literature review or pure computer programming. Depends on the nature of the project, the work covers by the students may include the background and scope of the project; literature review, field works; experiments; data collection; case studies;

Subject Code	ISE431
Subject Title	Engineering Costing and Evaluation
Credit Value	3
Level	4
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject provides students with knowledge of
	1. the major types of costing methods and budgeting operations that support engineering cost analysis and project/operations planning and control;
	2. concepts and techniques of economic analysis that can be applied to solving engineering and business problems;
	3. methods that evaluate/support engineering projects and operations.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. apply costing principles and techniques to the planning and control of profitability in the production of goods and services in the engineering industry;
	b. prepare budgets and relate them to production plans for performance evaluation;
	c. apply the principles and techniques of economic analysis to the appraisal of investment alternatives;
	d. understand the foregoing principles and apply the foregoing techniques in the evaluation of engineering projects.
Subject Synopsis/ Indicative Syllabus	1. <u>Costing in the Production of Goods and Services in the Engineering</u> <u>Industry</u>
	Production and operation costs; job and product costing; process costing; absorption of overhead; cost behaviour and cost estimation; functional-based costing; activity-based costing; cost database and its maintenance; learning curve; cost-volume-profit analysis; pricing and profitability analysis; make-or-buy decisions.
	2. <u>Performance Planning and Evaluation</u>
	Enterprise strategy and budget setting; standard costing and variance analysis; flexible budgeting and variance analysis; production plan; cash budget; profit plan; master budget; performance evaluation; balanced

	1 1.	1						
	scorecard and its in	plementatio	n.					
	3. Engineering and Project Economic Analysis							
	Cost and benefit concepts; worth measures and efficiency measures; time value of money; capital budgeting and investment appraisal decisions; financing methods; cost of capital; evaluation of project alternatives using discounted cash flow methods; opportunity cost; lease versus buy decisions; replacement and timing decisions; effects of tax and depreciation; sensitivity and risk analysis in project evaluation.							
	4. Engineering Evalua	tion						
	Technological for environmental cost context of engineer	evaluation	and ma	inagem		-		
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, and case studies is used to deliver the various topics in this subject. Some material is covered using a problem-based format where this advances the learning objectives. Other material is covered through directed study to enhance the students' self-learning abilities. Tutorials, projects, and case studies are conducted mainly as group activities so that students can discuss and practice the materials learnt in the class. This also stimulates further thinking about the materials together with the factors to be considered in solving problems related to the subject.							
Assessment								
Methods in Alignment with Intended Learning	Specific assessment methods/tasks	% weighting	Intend be ass		ject lea	arning o	utcomes to

Subject Code	ISE448						
Subject Title	Production Logistics						
Credit Value	3						
Level	4						
Pre-requisite	ISE246 Introduction to Logistics Engineering						
Objectives	This subject will provide students with						
	 an introduction to basic concepts and practices in production logistics; comprehensive coverage of both traditional methods and contemporary topics in production logistics; 						
	3. understanding of the importance and functionalities of inventory contro and of the application of the principles of inventory costs, policies, and models for the control and management of dependent and independen inventories;						
	techniques to design and examine warehouses, material handline systems, and transportation systems.						
Intended Learning Outcomes	Upon completion of the subject, students will be able to						
	a. examine an existing work situation in production logistics environment and conduct a productivity improvement program;						
	b. apply appropriate techniques for improving an existing warehouse and for designing a new material handling system;						
	c. understand the functionalities and importance of inventory control an management of a production logistics system;						
	apply the principles of inventory control and management in managir dependent and independent inventories, with consideration of the element of demand uncertainty;						
	e. determine product demand forecasts and establish an optimal routine for production transportation;						
	f. apply established algorithms for transportation management.						
Subject Synopsis/ Indicative Syllabus	1. <u>Introduction</u>						
	Productivity, logistics mission, the work of logistics, integrated logistics, operating objectives, barriers to internal integration, logistics performance cycles, and managing operational uncertainty						
	2. MRP, DRP and Inventory Management						

	Dependent and independent demand inventory; Material requirement planning and distribution requirements planning; Economic ordering quantity and reordering models; Planning inventory resources and accommodating uncertainty; Vendor inventory management systems; The just-in-time concept; Collaborative, planning, forecasting, and replenishment methods									
	3. <u>Warehouse design and material handling</u>									
	Warehouse design: Layout design, the concept of honeycomb loss in goods stacking, method of assigning dedicated storages; Material handling: Equipment types and quantitative flow balance analysis									
	 4. Forecasting and its implication to Supply Chain Management General forecast considerations, forecast processes, and techniques Simulation game to illustrate forecasting techniques and forecasting impact on managing a supply chain 5. Distribution networks and Supply Chain Dynamics 									
	Function of distribution centers, cross-docking versus value-added processes, determining the number of distribution centres required, and warehouse management system									
Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, laboratories, and case studies are used to deliver the various topics in this subject, some of which are covered in a problem-based format to enhance learning objectives. Others are covered by directed study in order to enhance students' ability in "learning to learn." Some case studies, largely based on actually industrial practices, are used to integrate topics and thereby demonstrate to students how the various techniques are inter-related.

Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject aims to
	1. enable students to understand the concept of mobile technology and to apply relevant techniques to solve traditional logistics process problem;
	2. provide students with knowledge in applying latest commercial available hardware and software technologies to enable efficient information capturing, processing and exchanges among various business entities in today's supply chain and logistics environment;
	3. provide a working knowledge of latest information and communication technology and an interactive environment in which students can learn and practice their skills in mobile applications.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. understand the existing logistics operations and to design process improvement procedures in various supply chain areas;
	b. apply appropriate mobile devices and data capturing techniques to improve data exchange and information flow;
	c. integrate existing logistics infrastructure into mobile technologies to form a more effective system;
	d. identify the advantages and limitations of mobile technologies in various areas.
Subject Synopsis/	1. <u>Basics of Mobile Technologies</u>
Indicative Syllabus	Mobility of data; Industry classifications of mobile technologies; Mobile network infrastructure concepts and capabilities.
	2. Information Exchange, Identification, Location and Tracking Techniques
	Identification techniques (Barcode/Smartcard/RFID); Logistics management requirements; Wireless Network Services (WAP/SMS); Personal Digital Assistant (PDA) business tools; Image capture and transmission using camera phones; Video streaming and conferencing.

	3. <u>Workflow Improve</u>	ement					
	Business automation tools; Mobile functionality requirements for productivity support; Personal productivity tools; Instant messaging using mobile technology; Technology integration requirements.						
	 Mobile Applications in Different Areas Integration of message delivery services; Export/import process enhancement; Mobile security; Personalization of consumer profiles; Mobile entertainment; Mobile platform functionality; Market growth attributes and projections.

Subject Code	ISE450			
Subject Title	Simulation of Logistics Systems			
Credit Value	3			
Level	4			
Pre-requisite	SE246 Introduction to Logistics Engineering			
Objectives	This subject provides students with an in-depth knowledge of the techniques of computer simulation in general industrial and logistics systems. On completion, students will be capable of			
	1. understanding the role of simulation in design, planning, and control of industrial and logistics systems;			
	2. identifying how discrete event simulation can be used to model and analyze the performance of industrial and logistics systems;			
	3. assessing available simulation packages in the market in relation to particular requirements for the analysis of industrial and logistics systems;			
	4. planning and managing the design and development of industrial and logistics systems using relevant simulation software.			
Intended Learning	Upon completion of the subject, students will be able to			
Outcomes	a. understand the concept of simulation and various techniques of modeling industrial and logistics systems using computer simulation;			
	b. understand the behavior of logistics system;			
	c. identify the bottlenecks of industrial and logistics systems through computer simulation, and verify feasible scenarios to improve the performance of such systems;			
	d. formulate different approaches in solving simulation problems that involve analysis of the performance of different parties in a supply chain.			
Subject Synopsis/	1. <u>Introduction</u>			
Indicative Syllabus	A comprehensive and state-of-the-art treatment of all the important aspects of a simulation study, including modeling, simulation software, model verification, and validation, input modeling, statistical design, and analysis of simulation experiments			
	2. System Dynamics and Modeling Techniques			
	Definition of a system; System variables; Problem formulation; Discrete event simulation			

	3.	Supply Chain Simu	lation and De	ecision-Making using Simulation	
		The value of inform pooling	mation; Supp	ly chain variation; Bullwhip effect; Risk	
	4.	Waiting line

	7.	Simulating Logistic	es Systems		
		setup, machine lo Techniques in simu conveyers, vehicles Techniques in simu	ading, rewo ulating transp s, carousels, ulating other professional	ction logistics systems, such as machine rk and scrap, and transfer machines; portation and material handling, such as automatic-guided vehicles, and robots; r systems, such as banks, retail stores, services, distribution centers, delivery ices	
	8.	Typical Tutorials/C	ase Studies		
		Modeling and experience	rimentation u	sing a ProModel	
Teaching/Learning Methodology	used for simu orie proc gene on a syst desi vari	mixture of lectures, tutorial exercises, laboratory work, and case studies are and to deliver the various topics in this subject. Different types of scenarios the analysis of industrial and logistics systems are adopted using various mulation software programs as problem-solving tools. The subject is project- ented, and exposes students to hands-on experience in the simulation access, including design, model construction, validation of the model, heration of results, and model maintenance. Some case studies, largely based actually industrial practices, are used to illustrate operations of logistics tems using appropriate simulation packages. The in-class assignments are bigned to facilitate students' understanding of the concept of simulation and ious techniques in modeling industrial and logistics systems using computer mulation.

	The assignments and quiz are designed to assess the students' knowledge of the different principles and techniques in applying the concept of logistics simulation. In addition, these test whether students are able to formulate and solve industrial and logistics problems. The group project is designed to assess students in their understanding of logistics systems and the use of simulation software.								
	Laboratory work is designed to assess whether students can analyze and formulate logistics problems, and whether they can solve the problems by using the simulation approach.

Subject Code	ISE457
Subject Title	Business Process Management
Credit Value	3
Level	4
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject aims at enabling students to
	1. appraise the importance of structuring and measuring business processes in an organization;
	2. identify and build business processes for various business applications;
	3. apply appropriate measures to assess, report and improve the performance of business processes.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. describe the basic concept of business process management;
	b. assess the organizational implications of functional and process-centric management;
	c. illustrate the process of designing and developing a Business Process Management Solution;
	d. configure and manage a business process management system with knowledge of the scope and limitations of such tools;
	e. develop an overall understanding of team building and governance of processes in an organization.
Subject Synopsis/	1. Introduction to Business Process Management
Indicative Syllabus	Definition of business process management; Process and workflow life cycle; Transformation of a functional enterprise to a process-centric enterprise; Business value and risk of process automation.
	2. <u>Business Process Management Solution Development</u>
	Business process management solution architectures; Business process analysis; BPM Process Development; BPM reporting and monitoring. BPM and application integration; BPM and Robotic Process Automation; Configuration of business process management solutions; BPM software vendor products; and Evaluation and selection.
	3. <u>Technology for Business Process Management</u>

	Process Modeling Standards - Business Process Modeling Notation (BPMN); Process repository and Business rules systems.							
Teaching/Learning Methodology	A mix of lectures, laboratories, tutorial exercises, and projects is used to deliver the various topics in this subject. Practical problems and case studies are raised as a focal point for discussion in tutorial classes. Laboratory session(s) are also used to illustrate and assimilate some fundamental principles of business process management, some of which are covered in a problem-based format and exercises to enhance the learning objectives. Others are covered through directed study in order to enhance the students' ability of "learning to learn." The subject stresses creative thinking, and problem solving approach. Local and overseas case studies are also included to reinforce understanding and enhance practicality.							
Assessment Methods in Alignment with Intended Learning	Specific assessment	%	Inten	ded sut	oject le	arning	outcom	nes to

	Total	100%						
	The coursework consists of assignments with individual and group components, usually up to two individual tests. All assessment components require students to apply concepts delivered in lectures to real life cases. The assignments require students to conduct background research on BPM and identify, among others, potential applications and benefits. Short quizzes are also used to test student's understanding of the taught concepts and ability to apply BPM to stated situations. As they work in groups, students must tackle a project by identifying the problem structure, representing the processes, presenting and simulating the process flow, as well as identifying innovations and potential improvements in the current design.

Subject Code	ISE460
Subject Title	Logistics Information Management
Credit Value	3
Level	4
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject will provide students with
	1. understanding of the practical applications and principles of logistics information management in dispersed logistics networks;
	2. knowledge of the operation of an order-processing system at the strategic and tactical level;
	3. ability to examine IT applications in transportation and warehouse management;
	4. ability to identify the methodology for implementing the integrated logistics management concept using total cost analysis.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. apply the techniques and concepts of information system for warehousing, distribution, and transportation;
	b. identify how the logistics systems can be configured to support global logistics strategy;
	c. examine the ordering process and methods for implementing company's logistics information system;
	d. apply learned skills in articulating the requirements in processes and procedures related to logistics, marketing, and the total cost concept.
Subject Synopsis/	1. <u>Strategic Logistics Management</u>
Indicative Syllabus	Global logistics management processes, including environmental analysis, planning, structure, plan implementation, and controlling the logistics program; Factors affecting global logistics strategies; Financial aspect of global logistics and global market opportunities
	2. <u>Managing Order Processing Information System</u>
	Customer order cycle, communication function with Electronic Data Interchange (EDI) and Value-Added Networks (VAN); Integrating order processing and the company's information system; Managing information systems to support time-based competition and e-Procurement

	3. Distribution Planni	ng Managem	ent						
	Strategic and operational issues drawn from logistics companies to highlight the use of management information systems for warehousing, freight forwarding, and distribution planning and vehicle routing with Global Position System (GPS) and Geographical Information System (GIS); Data requirement for computer-based distributed systems; Monitoring the performance of logistics system								
Teaching/Learning Methodology	A mixture of lectures and case studies, with the support of laboratory work, is used to deliver the various topics. Lectures on concepts and principles are given in class. Activities at tutorial involve discussions with students regarding their readings and assignments to provide technical guidance during the progress of the projects and render advice on report writing. Hands-on laboratory work and case studies are used to enhance students' understanding and awareness of the latest development and contemporary issues related to the subject area.

Subject Code	ISE461			
Subject Title	Green Legislation and Supply Chain Logistics			
Credit Value	3			
Level	4			
Pre-requisite/Co- requisite/Exclusion	Knowledge of supply chain management			
Objectives	The subject relates green practices to supply chain management. Students learn now green legislation has evolved over the years, and the importance and impacts of environmental regulations with respect to supply chain management. In this connection, the environmental impacts of supply chains are discussed. In addition, the course introduces related methodologies and tools for analysing, lesigning, and improving supply chains in a green context.			
Intended Learning	Upon completion of the subject, students will be able to:			
Outcomes	a. understand recent trends in green legislation with respect to supply chains;			
	b. understand the environmental impacts of supply chains and hence the need for green supply chains;			
	c. apply related methodologies and tools to the design of green supply chains and the improvement of existing supply chains;			
	d. integrate green practices, based on green legislation, into supply chain activities for sustainable development;			
	e. have a critical and analytical perspective that enhances their appreciation and independent judgment of green supply chain design;			
	f. understand the importance of green legislation and thus comply with green regulations in their future professional career.			
Subject Synopsis/	1. Overview of Green Supply Chain Management			
Indicative Syllabus	Recent trends in green supply chain management; environmental impacts of supply chains, the green supply chain as a competitive advantage in today's business environment.			
	2. <u>Evolution of Green Legislation</u>			
	Drivers of green supply chains; recent trends in green legislation; RoHS, WEEE, and REACH; need for and importance of green legislation related to supply chain management.			
	3. <u>Life-Cycle Approach to Green Supply Chains</u>			

	Life-cycle assessmen chain design.	t as a tool; g	greenin	g of si	upply of	chains;	green	supply
	4. <u>GreenSCOR model</u>							
	Supply chain operations reference (SCOR) model; Supply Chain Councross-industry standard and diagnostic tool for supply-chain managemed GreenSCOR as a focused model; applications of the GreenSCOR model a green supply chain.							gement;
	5. <u>Greening Supply Cha</u>	ins by Revers	se Logi	stics				
	Reverse logistics; co effective means to r chain processes; rever	educe operat	ional	costs;			-	
	6. <u>Sustainable Developn</u>	nent						
	Sustainable developm	nent with resp	bect to	supply	chain 1	manage	ement.	
Methodology	A mixture of lectures and discussions of industrial case studies in small groups in tutorial sessions is employed. This interactive approach offers better opportunities for students to gain a theoretical understanding of the principles and hands-on experience. Students present the results of their discussion of selected cases in assigned project work either as individuals or in teams. This helps the students to develop a critical and analytical perspective to enhance their appreciation and independent judgment of green supply chain design. Industry experts may be invited to speak on a specific area such as the manufacture of electronics, printed circuit boards, and electrical appliances. This helps the students to understand the recent trends in green legislation with respect to supply chains, and to understand green practices and green supply chains for sustainable development in the real world.

Subject Title	Accounting for Decision Making
Credit Value	3
Level	2
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Exclusions: Financial Accounting (AF2108) Management Accounting 1 (AF2110)
Role and Purposes	This subject contributes in providing students with a framework to understand the accounting process in organizations. It also introduces to students the tools to understand and interpret financial information. Students should be capable of making informed decisions, including but not limited_ethical_decision making.
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. Describe the role and importance of management and financial accounting information in decision-making in a business environment. b. Identify assumptions, principles and conventions underlying financial reports as well as the potential ethical issues in organizations.
	c. Interpret and analyze financial reportsd. Use cost and management accounting information in business decision- making.
Subject Synopsis/ Indicative Syllabus	 Framework of Financial Reporting Information needs of capital markets, basic financial statements, accounting cycle: capturing economics events; accruals and deferrals; reporting financial results and roles of an auditor. Subject Title	Engineering Economics
Credit Value	3
Level	3
Exclusion	AF2618
Objectives	This subject aims to equip students with
	 The fundamental concepts of micro- and macroeconomics related to the engineering industry; The fundamental understanding of finance and costing for engineering operations, budgetary planning and control.
Intended Subject Learning Outcomes	 Upon successful completion of this subject, students will be able to: 1. Understand how the relevant economic factors shape the environment within which an engineering company operates; 2. Evaluate the financial condition of a company based on the financial statements; 3. Apply the basic cost accounting techniques in the planning and control of engineering and production activities.
Subject Synopsis/ Indicative Syllabus	 <u>Economic Environment of a Firm</u> Microeconomic Factors Scarcity, choice and opportunity cost; Demand, supply and price; Profit- maximizing behavior of the firm; Organization of industry: perfect competition and monopoly Macroeconomic Factors International trade and globalization <u>Accounting and Engineering Economics</u> Financial statements; Financial ratio analysis; Return on investment; Composition of cost; Cost-volume-profit analysis; Accounting profit versus economic profit <u>Fundamentals of Budgetary Planning and Control</u> Principle types of budgets for production and service operations; Approaches to budgeting and the budgeting process; Investment and source of finance; Cost of capital; Evaluation of investment alternatives
Teaching/ Learning Methodology	The two-hour lecture each week focuses on the introduction and explanation of key concepts of Engineering Economics. The one-hour tutorial provides students with directed studies to enhance their self-learning capacities.

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	APSS1L01		
Subject Title	Tomorrow's Leaders		
Credit Value	3		
Level	1		
GUR Requirements Intended to Fulfill	This subject intends to fulfill the following requirement(s) : Healthy Lifestyle Freshman Seminar Languages and Communication Requirement (LCR) Leadership and Intra-Personal Development Service-Learning Cluster-Area Requirement (CAR) Human Nature, Relations and Development Community, Organization and Globalization History, Cultures and World Views Science, Technology and Environment Yes or No Writing and Reading Requirements English or Chinese		
Pre-requisite / Co- requisite/ Exclusion	Nil		
Assessment Methods			
	100% Continuous Assessment	Individual Assessment	Group Assessment
	1. Class Participation	20%	
	2. Group Project		30%
	3. Term Paper	50%	
	assigned;The completion and	ated according to the d submission of all co quired for passing the	omponent

	 Student must pass all component(s) if he/she is to pass the subject.
Objectives	The course is designed to enable students to learn and integrate theories, research and concepts of the basic personal qualities (particularly intrapersonal and interpersonal qualities) of effective leaders. This subject also intends to help students develop and reflect on their intrapersonal qualities, interpersonal qualities and connection of learning to oneself. Finally, the subject cultivates students' appreciation of the importance of intrapersonal and interpersonal qualities in effective leadership.
Intended Learning Outcomes	Upon completion of the subject, students will be able to:
(Note 1)	 a. understand and integrate theories, research and concepts on the basic qualities (particularly intrapersonal and interpersonal qualities) of effective leaders; b. develop self-awareness and self-understanding c. demonstrate self-leadership in pursuit of continual self- improvement; d. apply intrapersonal and interpersonal skills in daily lives; e. appreciate the importance of intrapersonal and interpersonal qualities in effective leadership, particularly the connection of learning in the subject to one's professional development and personal growth; f. recognize and accept their responsibility as professionals and citizens to the society and the world
Subject Synopsis/ Indicative Syllabus (Note 2)	 An overview of the personal attributes of effective leaders: roles of intrapersonal and interpersonal qualities in effective leadership and university graduates' employability in the service economy. Self-leadership in effective leaders; the importance of self- understanding and self-management; life-long learning and leadership. Social emotional competence I (intrapersonal domain): awareness and understanding of emotions; emotional management, roles of emotional awareness and management in effective leadership and career development. Social emotional competence II (interpersonal domain): social awareness, relationship management, the application of social emotional competence in daily lives and in effective leadership. Resilience and stress-coping: stresses faced by youth; resilience and life adversities; coping with life stresses; role of resilience in effective leadership. Morality and integrity: moral competence; role of morality in effective leadership; ethical leadership; importance of moral competence in different professions.

	 Spirituality: convalues, meanindevelopment, respiritual practice Cultural competence in effective leaders both professions Effective commingortance of leadership, care Team building: building, role application of teaders 	ng of life, ole of spiri es in daily li betence and a globalized ship, respons als and citized munication: effective co and compass theories, con of team bu	spin itualit ves. d gl d wo sibilit ens of bas ommu sion ncept ildin ; in di	rituality in obal rld, g tes of f the s ic counicat in eff s, ski g in ifferen	ty a effec citiz citiz clobal unive cociet commu ion to ective lls an effec nt pro	nd p ctive enshi citiz ersity y. unicat o dai e leade d bloo ctive fessio	profes leade p: c enshi stude ion ly lift ership cks of leade ons.	sional rship; ultual p and nts as skills, e and o. f team ership,

and interpersonal leadership qualities. Hence, marks for class participation (including the participation in e-learning modules) and preparation for lectures will be given. Students will be assessed by: a) preparation for class (e.g., complete elearning modules, online assignment, and dig up materials before class), b) participation in class and online learning activities (e.g., completion of worksheets and sharing in class, participation in online discussion forum) and c) volunteering to answer questions and join discussions. Also, students will be invited to rate the performance and learning of other group members in an honest and authentic manner. The marks will reflect the mastery of knowledge, selfreflection and quality of interpersonal skills (such as collaboration with other members and contribution to the group) of the group members. Peer assessment will contribute to marks in class participation.

- 2. <u>Assessment of Group Project (30%)</u>: Group project presentation can give an indication of the students' understanding and integration of theories and concepts on personal qualities in effective leadership, personal and group reflections, interpersonal skills and degree of recognition of the importance of active pursuit of knowledge covered in the course.
- 3. <u>Assessment of Term Paper (50%)</u>: Individual paper can give an indication of the students' understanding and integration of theories and concepts on the personal qualities in effective leadership, self-assessment, self-reflection, connection of the subject matter to oneself and degree of recognition of the importance of active pursuit of knowledge covered in the course.

Based on the implementation of this subject in the past seven academic years (2012-2019), evaluation findings consistently showed that this subject was able to achieve the intended learning outcomes in the students. The positive evaluation findings are documented as follows:

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

Subjects offered by Chinese Language Centre

Subject Code	CLC1104C (Cantonese) / CLC1104P (Putonghua) [2019-20 onward] /
	CBS1104C (Cantonese) / CBS1104P (Putonghua) [2018-19 and before]
	(for 42470, 42477, 42480 and 42375)
	Remarks: Students taking the Cantonese version of CLC/CBS1104 (i.e. CLC/CBS1104C) will be offered a 39 hour non-credit bearing e-learning course in Putonghua (optional).
Subject Title	University Chinese(大學中文)
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Students with HKDSE Chinese subject result at level 3 or above or equivalent
Objectives	This subject aims at enhancing the students' command of language knowledge to communicate effectively in both written and spoken Chinese, with particular reference to the stylistic variations of expression in different communicative settings. The ultimate goal of this subject is to train students to be effective communicators and life-long learners, and to equip them for the Chinese Discipline-Specific Language Requirement subject.
Intended Subject Learning Outcomes	 Upon completion of the subject, students will be able to: (a) Consolidate the ability to identify and correct the most common errors in written texts; (b) Develop Chinese writing skills through the analysis and in-depth reading of selected literary masterpieces; (c) Master the format, organization, language and style of expression of various genres of Chinese writing; (d) Produce formal presentations in spoken Chinese effectively and appropriately.
Contribution of the Subject to the Attainment of the Programme Outcomes	Programme Outcomes: (for 42375) Category B: Attributes for all-roundedness • Programme Outcome 8. (for 42470) Category B: Attributes for all-roundedness • Programme Outcome 9. (for 42477) Category B: Attributes for all-roundedness • Programme Outcome 8. (for 42477) Category B: Attributes for all-roundedness • Programme Outcome 8. (for 42480) Category B: Attributes for all-roundedness • Programme Outcome 8.

Subject Synopsis/ Indicative Syllabus 1. Written communication Language, format and organization of each genre: coherence and thread of thinking in Chinese writing: style of expression of different genres; context dependent stylistic variation, development of logical and persuasive arguments. 2. Spoken communication Choice of words: articulation and flow of speaking; manner of speaking and gesture; identification of main idea and key messages; evaluation of relevancy of information in a message; skills of summarizing; agreeing / disagreeing / answering to questions pollely; use of visual add; body movement. 3. Reading strategies Intensive and critical reading; identification of authors' stances, arguments and proposes; ortracting useful information from the text; determination of the reacting information and arguments of the texts; appreciation of different genres including literary masterpieces. 4. Language development Grammatical skills; use of clear words; use of specific sentences; choice of diction. The teaching/learning methodology is a combination of highly interactive seminars, self-formed study groups, seminar discussion, oral presentations and written Sigments. E-learning paterials for enhancing students' proficiency in both spoken and written Chinese are included in Chinese LR teaching. Students are expected to follow teachers' guidelines and get access to the materials on the e-Learning platform for self-study on a voluntary basis. 	CBS3241P (2018-19 and before)
Subject Title	Professional Communication in Chinese
Credit Value	2
Level	3
Pre-requisite / Co-requisite	Chinese LCR subjects (in Semester 2 of Year 3 or Semester 1 of Year 4)
Objectives	This subject aims to develop the language competence for professional communication in Chinese required by students to communicate effectively with various parties and stakeholders in regard to engineering-related project proposals and reports.
Intended Learning Outcomes	 Upon completion of the subject, and in relation to effective communication with a variety of intended readers/audiences in Chinese, students will be able to a. plan, organise and produce professionally acceptable project proposals and reports with appropriate text structures and language for different intended readers b. plan, organise and deliver effective project-related oral presentations with appropriate interactive strategies and language for different intended audiences c. adjust the style of expression and interactive strategies in writing and speaking in accordance with different intended readers/audiences
Subject Synopsis/ Indicative Syllabus	 Project proposals and reports in Chinese Planning and organising project proposals and reports Explaining the background, rationale, objectives, scope and significance of a project Referring to the literature to substantiate project proposals Describing the methods of study Describing and discussing project results, including anticipated results and results of pilot study Presenting the budget, schedule and/or method of evaluation Writing executive summaries./abstracts

	 2. Oral presentations of projects Selecting content for audience-focused presentations Choosing language and style appropriate to the intended audience Using appropriate transitions and maintaining coherence in team presentations Using effective verbal and non-verbal interactive strategies 							
Teaching/Learning Methodology	Learning and teaching approachThe subject is designed to develop the students' Chinese language skills, both oral and written, that students need to communicate effectively and professionally with a variety of stakeholders of engineering-related projects. It builds upon the language and communication skills covered in GUR language 						and ects. It guage nclude ng and e-long on an ng the

Subjects offered by English Language Centre

The Hong Kong Polytechnic University

Subject Code	ELC1011
Subject Title	Practical English for University Studies
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	This subject aims to develop and enhance students' general proficiency and communication skills in English. A strong focus will be given to enhancing competence and confidence in writing, grammar, vocabulary, pronunciation and fluency.
Intended Learning Outcomes	 Upon successful completion of the subject, students will be able to: a. organise and write accurate and coherent short texts b. improve language accuracy and the ability to proofread for common errors in written texts c. use appropriate verbal and non-verbal skills to enhance fluency and accuracy in spoken communication such as short presentations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present their views logically and coherently.
Subject Synopsis/ Indicative Syllabus	 Written communication Enhancing the use of accurate and appropriate grammatical structures and vocabulary for various communicative purposes; improving the ability to organise written texts logically; and improving cohesion and coherence in writing. Spoken communication Developing verbal and non-verbal interaction strategies appropriate to the context and level of formality. Reading and listening Understanding the content and structure of information delivered in written and spoken texts; developing effective reading and listening strategies. Language development Improving and extending relevant features of grammar, vocabulary, pronunciation and fluency.
Teaching/Learning Methodology	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting of texts, information search, minipresentations and discussions. Students will make use of elearning resources

The Hong Kong Polytechnic University

Subject Code	ELC1012/ELC1013
Subject Title	English for University Studies
	(This subject will be offered in two versions for students who will primarily be using (1) APA/Harvard referencing styles or (2) IEEE/Vancouver referencing styles in their university studies.)
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Students entering the University with Level 3-5** from the HKDSE will be required to take this course.
Objectives	This subject aims to help students study effectively in the University's English medium learning environment, and to improve and develop their English language proficiency within a framework of university study contexts.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to: a. refer to sources in written texts and oral presentations b. paraphrase and summarise materials from written and spoken sources c. plan, write and revise expository essays with references to sources d. deliver effective oral presentations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present information logically and coherently.
Subject Synopsis/ Indicative Syllabus	 Written communication Analysing and practising common writing functions; improving the ability of writing topic sentences and strategies for paragraph development; understanding common patterns of organisation in expository writing; taking notes from written and spoken sources; practising summarising and paraphrasing skills; improving coherence and cohesion in writing; developing revision and proofreading skills. Spoken communication Recognising the purposes of and differences between spoken and written communication in English in university study contexts; identifying and practising the verbal and non-verbal interaction strategies in oral presentations; developing and applying critical thinking skills to discussions of issues. Language development Improving and extending relevant features of grammar, vocabulary and pronunciation.

Teaching/Learning Methodology	 The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting and evaluating texts, minipresentations, discussions and simulations. The process approach to writing is adopted, and students make use of elearning resources to engage in academic discussions and to reflect on their learning. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning.

Subject Code	ELC2011
Subject Title	Advanced English Reading and Writing Skills
Credit Value	3
Level	2
Pre-requisite / Co-requisite	Pre-requisite: ELC1012 / ELC1013 English for University Studies
Objectives	This subject aims to help students become more effective readers and writers. It focuses on developing students' facility to read a variety of texts in a critical manner, both intensively and extensively; and to write texts that demonstrate knowledge and insight.
Intended Learning Outcomes	Upon successful completion of the subject, students will be able to examine a variety of texts, including literary texts, and:
	a. reflect on and critically analyze texts of different genres and styles, identifying the writer's aims and stance
	b. identify and evaluate language used to make claims and support these with valid arguments
	c. write a text on a chosen topic that includes their opinion and interpretation of some key issues and demonstrates critical thinking and creativity
Subject Synopsis / Indicative Syllabus	Reading strategies Reading extensively to appreciate the use of language, acquire information, promote understanding, and develop empathy. Reading intensively to investigate a particular topic and develop an in-depth understanding of issues and stances. Reading critically to extract implications, identify writers' assumptions and purposes, and analyze issues raised in texts written from different perspectives.
	Writing strategies Describing and analyzing the structure, meaning and characteristics of a variety of texts. Presenting views and arguments to educated readers with sophisticated language and appropriate visual images and formats.
Teaching/Learning Methodology	The study method is primarily seminar-based. Following a blended learning approach, activities include teacher input as well as in- and out-of-class work involving sharing and discussion of reading experiences; and reading, evaluating and drafting texts. The process approach to writing is adopted, and students make use of e-learning resources to engage in discussions and to reflect on their learning.
	Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	ELC2013
Subject Title	English in Literature and Film
Credit Value	3
Level	2
Pre-requisite / Co- requisite/ Exclusion	Pre-requisite: English for University Studies (ELC1012/1013)
Objectives	This subject aims to introduce students to a range of literary genres in English as well as to enable them to consider differences in media representations of genres, and to appreciate and negotiate the meanings of a variety of literary texts. It is also intended that the subject will help students further develop literacy, as well as higher order thinking and life-long learning skills.
Intended Learning Outcomes (Note 1)	Upon successful completion of the subject, students will be able to: a. examine and analyse literary texts from different perspectives b. discuss literary techniques employed by writers c. appreciate and articulate differences in textual and visual media representations To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present and support stance and opinion.
Subject Synopsis/ Indicative Syllabus (Note 2)	 Written communication Describing and interpreting content and language in literary texts; employing appropriate grammatical structures and vocabulary. Spoken communication Presenting critical evaluation of literary works effectively and convincingly. Reading Developing understanding of and competence in using literary devices such as metaphor, simile and symbolism, via reading literary texts and viewing film versions. Language development Improving fluency and pronunciation, and extending grammatical and lexical competence.

Teaching/Learning Methodology (Note 3)	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving listening to and viewing a variety of audio-visual sources, reading and drafting texts, conducting internet research, making mini-presentations, participating in discussions, and comparing various representations of literature. Students will make use of elearning resources and web-based work to further improve their English literacy skills. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.					
Assessment Methods in Alignment with Intended Learning	Specific assessment methods/tasks	% weighting	outcomes	subject lea s to be asse ck as appro	essed	
Outcomes			a	b	c	-
(Note 4)	1. Individual Essay	40%	✓	√	✓	
	2. Group Presentation	30%	✓	√	✓	
	3. Individual Project	30%	✓	\checkmark	✓	
	Total	100 %				-
	In assessment 1, students are required to write an individual paper in which they critically reflect on their reading of prose, and by so doing, demonstrate their achievement of LO (a). Assessments 2 and 3 are aligned with all three LOs. Assessment 2 assesses students' understanding of a literary drama and requires comparison of the merits of its textual and theatrical versions. Assessment 3 is an individual project that requires interpretation and presentation of more creative literature and audio-visual sources.

novelettes, plays and poetry.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	ELC2014
Subject Title	Advanced English for University Studies
Credit Value	3
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: English for University Studies (ELC1012/ELC1013) (unless exempted)
Objectives	This subject aims to help students study effectively in the University's English medium learning environment, and to improve and develop their English language proficiency within a framework of university study contexts.
Intended Learning Outcomes (Note 1)	 Upon successful completion of the subject, students will be able to: a) research relevant academic texts for a topic and integrate the sources into a position argument essay appropriately and effectively; b) plan, research for, write and revise a position argument essay; and c) present and justify views effectively in a mini oral defence. To achieve the above outcomes, students are expected to use language and text structure appropriate to the context, select information critically, and present and support stance and opinion logically and persuasively.
Subject Synopsis/ Indicative Syllabus (Note 2)	 Written communication Developing logical and persuasive arguments; applying a variety of organisation patterns in discursive writing, including the writing of explanatory and evaluative texts; selecting information from academic texts critically; supporting stance; maintaining cohesion and coherence in discursive writing; achieving appropriate style and tone. Spoken communication Enhancing and practising the specific oral and aural skills required to participate effectively in an academic discussion and to present and justify views in an oral defence. Reading and listening Understanding the content and structure of information in oral and written texts; comprehending, inferring and evaluating messages and attitude. Language development Improving and extending relevant features of grammar, vocabulary and pronunciation.

Teaching/Learning Methodology (Note 3)	The study method is primarily seminar-based. Following a blended delivery approach, activities include teacher input as well as in- and out-of-class individual and group work involving drafting and evaluating texts, mini- presentations, discussions and simulations. The process approach to writing is adopted, and students make use of elearning resources to engage in academic discussions and to reflect on their learning. Learning materials developed by the English Language Centre are used throughout the course. Students will be referred to learning resources on the Internet and in the ELC's Centre for Independent Language Learning. Additional reference materials will be recommended as required.

It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcom

The Hong Kong Polytechnic University

Subject Code	ELC3531			
Subject Title	Professional Communication in English for Engineering Students			
Credit Value	2			
Level	3			
Pre-requisite / Co-requisite	English LCR subjects			
Objectives	This subject aims to develop the language competence for professional communication in English required by students to communicate effectively with various parties and stakeholders in regard to engineering-related project proposals.			
Intended Learning Outcomes	Upon completion of the subject, and in relation to effective communication with a variety of intended readers/audiences in English, students will be able to:			
	d. plan, organise and produce professionally acceptable project proposals with appropriate text structures and language for different intended readers			
	e. plan, organise and deliver effective project-related oral presentations with appropriate interactive strategies and language for different intended audiences			
	f. adjust the style of expression and interactive strategies in writing and speaking in accordance with different intended readers/audiences			
Subject Synopsis /	1. Project proposal in English			
Indicative Syllabus	Planning and organising a project proposal			
	• Explaining the background, rationale, objectives, scope and significance of a project			
	• Referring to the current situation or existing literature to substantiate a project proposal			
	• Describing the methods of study			
	• Describing and discussing anticipated project results and (if applicable) results of a pilot study			
	• Presenting the budget, schedule and (if applicable) method of evaluation			
	• Writing an executive summary			
	2. Oral presentation of project proposal in English			
	• Selecting content for an audience-focused presentation			
	Choosing language and style appropriate to the intended audience			
	• Using appropriate transitions and maintaining coherence in a team presentation			
	• Using effective verbal and non-verbal interactive strategies			
Teaching/Learning Methodology	The subject is designed to develop the English language skills, both oral and written, that students need to use to communicate effectively and professionally with a variety of stakeholders of engineering-related projects. It builds upon the language and communication skills covered in GUR language training subjects.			

	 The study approach is primarily seminar-based. Seminar activities include instructor input as well as individual and group work, involving drafting and evaluating texts, mini-presentations, discussions and simulations. The learning and teaching activities in the subject will focus on a course-long project which will engage students in proposing and reporting on an engineering-related project to different intended readers/audiences. During the course, students will be involved in: planning and researching the project writing project-related documents such as project proposals giving oral presentations to intended stakeholders of the project

Subjects offered by Faculty of Engineering

Subject Code	ENG1003
Subject Title	Freshman Seminar for Engineering
Credit Value	3
Level	1
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	 The objectives of this subject are to: (1) Introduce students to the engineering broad discipline and enthuse them about their major study (2) Cultivate students' creativity and problem-solving ability, and global outlook (3) Introduce students to the concept of entrepreneurship (4) Engage the students in desirable forms of learning at university that emphasizes self-regulation, autonomous learning and deep understanding
Intended Learning Outcomes	 Upon completion of the subject, students will: (a) Be able to demonstrate an understanding and an enthusiasm about the engineering broad discipline and their major study (b) Develop their problem-solving ability and global outlook (c) Be able to demonstrate an understanding of entrepreneurship (d) Be able to research for information, formulate a project plan, and manage a project with initiative (e) Be able to demonstrate an understanding of academic integrity.
Subject Synopsis/ Indicative Syllabus	 Online Tutorial on Academic Integrity (4 hours*) Students will be required to complete successfully an Online Tutorial on Academic Integrity on or before week 5 of the first semester. The students will understand the importance of academic integrity by completing the Online Tutorial. Seminars (12 hours*) There will be seminars given by various speakers on various topics to introduce to students the engineering broad discipline, to enthuse them about their major study, to arouse students' interests in engineering and to cultivate their understanding of and sense of belonging to the discipline and the engineering profession, and to cultivate students' global outlook. The formats of the seminars may be, but not limited to, Departmental Seminars, and Renowned Speaker Seminar. Freshman Project (45 hours*) There will be practical workshops, presentation and demonstration sessions for the Freshman Project. The freshman project aims at developing students' creativity, problem-solving skills, research for information, and project management abilities through practical and hands-on tasks at a level commensurate with their first-year engineering backgrounds. Students will work in small groups under the guidance of teachers/instructors to design and implement an engineering solution to some given problems.

Th urr atti En lea	<i>Entrepreneurship Project (45 hours*)</i> the entrepreneurship project is designed to develop students' appreciation and inderstanding about entrepreneurship and the commercialization process by ttending lectures, workshops and tutorials. In the course of the intrepreneurship Project, students will identify technology opportunities and earn the skills of preparing a simple business plan.
Methodology Th Ui Bi Of gi I Set I Set	 Indine Tutorial on Academic Integrity Indiversity to help the students understand the importance of academic integrity. y going through the Online Tutorial, students will be aware of the importance f upholding academic integrity during University study. They will also learn ood practices by which to stay clear of dishonest behaviors and academic lagiarism. Completing the OTAI is a completion requirement of Freshman eminar. For successful completion of the OTAI, the students need to attempt the pre-test in the Tutorial, read all four modules in the Tutorial, obtain at least 5% in the post-test in the Tutorial and sign the Honour Declaration before the ompletion deadline. Students who fail to complete the OTAI before the ompletion deadline will fail the Freshman Seminar for Engineering. eminars he seminars (such as renowned speaker seminars and departmental seminars) re designed to arouse students' interest about engineering. The delivery mode ill be interactive and engaging. Students will be motivated to search for aformation and do background reading. They will be encouraged to raise uestions and discuss with the presenters. Assessment tasks (quizzes) will be esigned to measure students' learning outcomes as well as to encourage articipation and interaction. Tershman Project Tor the Freshman Project, students will work collaboratively with their group nembers to design and implement an engineering solution to a given problem and er the guidance of instructors. There will be close staff-students and udents-students interaction. Students will consist of demonstration, resentation, reports, and reflective essay writings. These are designed to valuate individual student's performance and achievement of the relevant thended learning outcomes as well as to encourage active participation, ppropriate pedagogies will also be used to promote the "Learning to Learn" bility of students.

Assessment Methods in Alignment with Intended Learning	Students' performance in this subject will be assessed by using a letter-grading system in accordance with the University's convention from grade F (failure) to A+. The relative weights of the different assessment components are as follows:								
Outcomes	Specific assessment methods/tasks	% weighting	3 E				e)		
			а	b	с	d	e

(revised) June 2020

Subject Code	ENG2003
Subject Title	Information Technology
Credit Value	3
Level	2
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	To provide the foundation knowledge in internet applications, computer networks, and database management that is essential to modern information system design
Intended Subject Learning Outcomes	 Upon completion of the subject, students will be able to: <u>Category A: Professional/academic knowledge and skills</u> 1. Understand the functions and features of modern computing systems. 2. Understand the client-server architecture and be able to set up multiple internet applications. 3. Understand the principles of computer networks and be able to set up simple computer networks. 4. Understand the basic structure of a database system and be able to set up a simple database system. <u>Category B: Attributes for all-roundedness</u>
Subject Synopsis/ Indicative Syllabus	 Solve problems using systematic approaches. Syllabus: <u>Introduction to computers</u> Introduction to information technology using Internet of Things as a real life example. Introduction to modern computing systems.
	 <u>Computer Networks</u> Introduction to computer networks (Client-Server Architecture). Study different internet applications (HTTP/FTP/DNS). Explain basic concepts on packet routing (Data Encapsulation/IP Addressing/Functions of Routers). Introduction to basic network security measures. <u>Introduction to data processing and information systems</u> Database systems – architecture, relational database concept, structural query language (SQL), database management systems, Web and database linking, database application development. Introduction to Information systems. Workflow management. Case study: Database design, implementation and management.

Teaching/Learning Methodology	There will be a mix of lectures, tutorials, and laboratory sessions/workshops to facilitate effective learning. Students will be given case studies to understand and practice the usage of modern information systems.

Subject Code	ENG3004
Subject Title	Society and the Engineer
Credit Value	3
Level	3
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject is designed for engineering students as a complementary subject on the role of the professional engineer in practice and their responsibilities toward the profession, colleagues, employers, clients, and the public. The objectives of the subject are to enable students to
	1. appreciate the historical context of modern technology and the nature of the process whereby technology develops and the relationship between technology and the environment, as well as the implied social costs and benefits;
	2. understand the social, political, legal, and economic responsibilities and accountability of the engineering profession and the organizational activities of professional engineering institutions;
	3. be aware of the short-term and long-term effects related to safety and health, and the environmental impacts of technology;
	4. observe professional conduct, as well as the legal and other applicable constraints, related to various engineering issues; and
	5. develop a strong vision to optimize their contribution to sustainable development.
Intended Learning	Upon completion of the subject, students will be able to
Outcomes	a. identify and evaluate the effects of technology as it applies to the social, cultural, economic, legal, health, safety, and environmental dimensions of society;
	b. explain the importance of local and international professional training, professional conduct and ethics, and responsibilities in various engineering disciplines, particularly the Washington Accord;
	c. evaluate and estimate, in a team setting, the impact of contemporary issues, planned projects, and unforeseen technological advances related to engineers; effectively communicate and present the findings to laymen and peers.
Subject Synopsis/ Indicative Syllabus	 Impact of Technology on Society Historical cases and trends of technological innovation explored through their impact on social and cultural developments of civilization and their commonalities.

	2. <u>Environmental Protection and Related Issues</u>
	Roles of the engineer in energy conservation, ecological balance, and sustainable development.
	3. <u>Global Outlook for Hong Kong's Economy and Industries</u>
	Support organizations, policies and their impacts on industrial and economic development in Greater China, the Pacific Rim, and the world.
	4. <u>Regulatory Organizations and Compliance</u>
	Discussion of engineer's responsibilities within different regulatory frameworks and environments; Examples from various entities such as the Labor Department and the Occupational Health and Safety Council; Legal dimensions to engineering such as liability, contract law, and industrial legislation.
	5. <u>Professional Institutions</u>
	Local and overseas professional institutions; Washington Accord and the qualifications and criteria of professional engineers.
	6. <u>Professional Ethics</u>
	Prevention of bribery and corruption; The work of the Independent Commission Against Corruption (ICAC); Social responsibilities of engineers.
Teaching/Learning Methodology	Class comprises short lectures to provide essential knowledge and information on the relationships between society and the engineer under a range of dimensions.
	Other methods include discussions, case studies, and seminars to develop students' in-depth analysis of the relationships.
	Each student will submit two assignments based on their weekly learning activities, which will be part of the subject's evaluation. The assignments will deal with important issues of social, cultural, economic, legal, health, safety, and environmental dimensions of society.
	Students are assembled into groups; throughout the course, they will work on engineering cases by completing the following learning activities:
	1. Case analysis where students explore the relationships between society and the engineering issues of a project under specific dimensions;
	2. Construction and assembly of a case portfolio which includes
	 i. Presentation slides ii. Feedback critiques iii. Weekly summary reports iv. A report on Sustainable Development v. Individual Reflections
	3. Final oral presentation
Assessment Methods	

in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learn outcomes to be assess		-			
			а	b	с			
	1. Continuous assessment	70%						
	• Group weekly learning activities	(20%)	~	~	✓			
	• Individual Assignments (2)	(20%)	~	~				
	• Individual final presentation	(15%)	~	~				
	Individual reflection statement	(5%)	~	~				
	Group project and SD reports	(10%)	~	\checkmark	✓			
	2. Examination	30%	~	~				
	Total	100%						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:							
	The coursework requires students to work in groups to study cases from the perspectives of the eight dimensions in an engineering setting. Based on these exercises, students' ability to apply and synthesize acquired knowledge can be assessed through their performance during groups' discussion, oral presentations, and the quality of their portfolio reports on the case studies.							
	The closed-book examination is used to assess students' critical problem-solving skills when working on their own.							
Student Study Effort	Class contact:							
Expected	 Lectures and review 		27 Hrs.					
	Presentation	12 Hrs.						
	Other student study efforts:							
	Research and preparation	55 Hrs.						
	 Report and Assignments writing 	25 Hrs.						
	Total student study effort			119 Hrs.

Subject Code	ENG4001
Subject Title	Project Management
Credit Value	3
Level	4
Pre-requisite/Co- requisite/Exclusion	Nil
Objectives	This subject provides students with knowledge in:
	 project management tools in business organizations, taking into account the time-cost relationships, resources, processes, risks, the project life cycle, organization, and management principles; project management methodologies and their application; choosing project variables for effective project management; and various developments of project management.
Intended Learning	Upon completion of the subject, students will be able to:
Outcomes	 a. demonstrate good understanding of definition of a project, the characteristics and project life cycle; b. identify appropriate project variables and practices that are applicable to engineering projects; c. perform project planning, cost/resources estimation, evaluate and monitor of project progress; and d. propose project management solutions, taking into consideration the project objectives and constraints.
Subject Synopsis/ Indicative Syllabus	 Project Overview, Management Principles, and the Systems Approach Characteristics of projects and project management. Management principles. Project organization. Team development. Systems concepts and principles. Conflict management.
	 Project Methodologies and Planning Techniques Constraints: time, cost, and technical performance. Work breakdown structure. Management of scope. Scheduling tools: Gantt charts, network analysis techniques, time-phased networks, CPA, PERT, and resource smoothing.
	 <u>Cost Estimation and Cost Control for Projects</u> Types of estimates. Budgeting project costs. Experience curve. Cost schedules and forecasts. Cost control systems.
	 Evaluation and Control of Projects Earned value measurement system. Managing project risks. Status reporting. Project closeout and termination.

Teaching/Learning Methodology	A mixture of lectures, tutorial exercises, case studies, and laboratory work are used deliver the various topics in this subject. Some material is covered using a proble based format where this advances the learning objectives. Other material is cover through directed study to enhance the students' "learning to learn" ability. Some of studies are from best practices of projects, based on a literature review. They are us to integrate the topics and demonstrate to students how the various techniques interrelated and applied in real-life situations.						olem- vered case used

(Revised) July 2015

Subjects offered by Department of Logistics and Maritime Studies

The Hong Kong Polytechnic University

Subject Code	LGT2009
Subject Title	Introduction to Shipping and Transport Logistics Operations
Credit Value	3
Level	2
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Role and Purposes	This is an introductory course, to develop necessary skills and knowledge for analyzing simple shipping and transport logistics operations, and to provide a foundation for advanced level courses in these subjects (Outcomes 8 and 11).
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. Evaluate the suitability of different types of ships for specific cargo transportation requirements, by applying basic concepts of ship design and classification. b. Appraise how maritime geography (including common sea routes, navigation channels and geographic constraints) affects shipping operations. c. Be familiar with current developments in the shipping industry to a level that is adequate for continued self-enhancement of knowledge of the subject. d. Be familiar with ships, ports and maritime geography to a level that provides adequate foundation for advanced level courses in shipping and logistics.
Subject Synopsis/ Indicative Syllabus	 Basic Ship Design and Layout Elementary ship design, construction and layout. An overview of different ship types (Bulk / Container carriers, tankers, specialist ships, passenger vessels). Propulsion systems, fuels. Tonnage measurement of ships. Ship Stability and Safety Ship stability and use of stability information. Load-line zones. Safety: navigational safety, fire safety, cargo safety, flooding, water tight compartments, safety systems. Vessel Operations

	1
	Elementary navigation, navigation aids. Berthing, anchoring and mooring arrangements. Rules of the Road. Watch- keeping requirements, ship's crew composition and functions.
	Time zones and time differences, local time, standard time, UTC and International Date Line.
	Cargo types
	Characteristics of primary cargoes: container / bulk / hazardous cargoes, dangerous goods, deck cargoes, specialized cargoes.
	Ports and operations
	Ports and terminals, terminal design and equipment characteristics, harbor configurations, pilotage, port controls, tugs, water/fuel/refuse barges, bunkers, ship handling.
	Cargo operations
	Types of cargoes, cargo compartments, hatch covers, cargo planning, stowage, handling and preparation, measurement, shipboard and dock side cargo handling systems, venting and ballast systems.
	Maritime Geography
	Sea routes, navigable canals, waterways and geographic constraints. Draft and maneuverability limitations.
	Voyage Planning
	Passage planning, route selection, transit time, turn around, economical speed, operational speed.
	Organization and Structure of Shipping
	Role of shipping registers, classification societies and various international maritime and trade organizations.
	Different types of shipping companies including their structures and management. Coastal and foreign trade.
	Maritime conventions and rules. Customs, Quarantine.
	Introduction to selected maritime conventions (STCW, MARPOL, SOLAS, SAR and COLREGs. Maritime Zones.
Teaching/Learning	Lectures introduce and explain key concepts with appropriate examples.
Methodology	Tutorials give students an opportunity to enhance their understanding of concepts taught in lectures. Tutorials are highly interactive and include discussions of current / past events, case studies and may include student presentations.

Subject Title	Management Science
Credit Value	3
Level	3
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Role and Purposes	To introduce to students the methodology of Management Science as a scientific approach to managerial decision making.
	To impart in students the concepts, theories and techniques of a variety of management science methods. (Outcomes 3 and 6)
	To develop students' ability and confidence in the use of management science methods for solving management decision problems. (Outcome 8)
Subject Learning	Upon completion of the subject, students will be able to:
Outcomes	a. Have a basic understanding of the principles, concepts and techniques in management science.
	 b. Understand the basic technical and analytical skills for management science. (Outcomes 3 and 6)
	c. Understand the application of management science in a managerial context for management decision-making. (Outcome 8)
	Students are expected to be able to demonstrate a range of skills to solve problems in management science. These include:
	 d. Critical thinking and analytical skills that include the capability to identify assumptions, evaluate statements, detect false logic and formulate problems. (Outcomes 3, 6, and 8)
	e. Effective problem solving and decision-making using appropriate analytical skills including identifying, formulating and solving problems in management science. (Outcomes 3, 6, and 8)
	f. Numeracy and quantitative skills including the use of models in management science. (Outcomes 3 and 6)

Subject Synopsis/ Indicative Syllabus	 The methodology of Management Science Linear Programming: model formulation, graphical solution for problems with two variables, computer solutions, sensitivity analysis Assignment and Transportation Problems Goal Programming Integer Programming Network Modeling: shortest route, maximal flow, minimum cost flow Waiting Line Models 								
Teaching/Learning Methodology	Concepts and techniques will be introduced through lectures. In seminars students are required to apply their knowledge and skills to analyse and solve various management science problems. Use of relevant computer packages will be included.

Subject Title	Supply Chain Management
Credit Value	3
Level	4
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Role and Purposes	The course focuses on operations management in basic supply chains, such as manufacturer-retailer and supplier-manufacturer systems. The course objectives are to learn recent best practices in supply chain management, and to develop skills in solving specific types of logistics and supply chain problems (Outcomes 6, 8, 9, 10). The course also intends to improve students' ability to deal with unstructured dynamic problems encountered in logistics and supply chain management (Outcome 3). Skill development is accomplished through lectures, group assignments, and case studies.
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. Understand the strategic importance of supply chain management (SCM) in improving a firm's competitive position in the marketplace; b. Understand the key characteristics of successful supply chains and how they differ from the traditional approaches; c. Gain insights into issues involved in the design, planning, and deployment of a supply chain. (Outcomes 3, 8, and 9) d. Understand the impact of SCM principle on a firm's overall strategy. (Outcome 10) e. Understand the importance of information technologies in the integration of supply chains. (Outcome 6) f. Gain fundamental skills for analyzing and managing a supply chain in an organization. (Outcome 9) Studying this subject will also help develop students' global outlook on global supply chain and global outsourcing, critical and creative thinking, and entrepreneurship.
Subject Synopsis/ Indicative Syllabus	Concepts in SCM; inventory management in the supply chain; cross-docking; vendor-managed inventory; risk pooling concept; logistics network design and planning; bullwhip effect and value of information; supply chain integration; product and process design for logistics; supply contracts; pricing and revenue management; strategic alliances and partnerships; information technology for the

	supply chain; emerging t	opics in SCM	[.						
Teaching/Learning Methodology	In the lectures, the general principles of the syllabus topics will be presented and developed, together with guidance on further reading and activities. Lectures may also be used for the presentation and discussion of leading cases. In the tutorials, students will develop and apply the general principles of the topic in student-centered activities, including simulation games, in-class exercises, and discussions.

The Hong Kong Polytechnic University

Subject Code	LGT4115
Subject Title	E-Commerce and Logistics
Credit Value	3
Level	4
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Role and Purposes	The role of this subject is to provide undergraduate students with an understanding of the basic business models and strategies for e-commerce within different organizations. The students should be able to explain how the internet and related technologies can effectively improve business decision and reshape the business strategy (Outcome 3). The course introduces the difference between traditional businesses and currently fast-evolving e-business and the students will analyze related cases to evaluate how e-commerce changes the traditional business processes (Outcome 5). The interactions between e-commerce and logistics industry will be analyzed (Outcome 11) and the students will be challenged to apply the information techniques and data analytics tools to improve the e-logistics management (Outcome 6).
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. Describe and explore various business and marketplace models and basic concepts and knowledge for e-commerce b. Describe structure and functions of key technologies supporting e-commerce and apply corresponding tools to improve e-commerce processes and make better business decisions c. Analyze sample e-commerce cases and evaluate how e-commerce business influence traditional business through the use of information technology among governments, people, and companies; d. Understand the information systems approach for the planning, analysis, design, development, and evaluation of supply chain and e-logistics management. e. Identify emerging trends in e-commerce development.
Subject Synopsis/ Indicative Syllabus	Fundamentals of e-commerce Common business models, critical success factors, and key technologies, etc. E-commerce Infrastructure

Subject Code	MM2711
Subject Title	Introduction to Marketing
Credit Value	3
Level	2
Normal Duration	1-semester
Pre-requisite / Co- requisite/Exclusion	Exclusion : Marketing and the Consumer (MM2791) or Introduction to Marketing (MM2B05) or equivalent
Role and Purposes	This core subject introduces the basic principles and concepts of Marketing. It provides an analytical foundation for further study of Marketing and also contributes to the BBA Programme Outcomes in two ways. First, the content directly addresses the <u>creation of value (Outcome 8), ethics (Outcome 4), cultural diversity and globalization</u> (Outcome 2). Second, the classroom activities and assessments develop students' teamwork, ability to communicate in English, <u>analyse business situations by applying</u> <u>relevant conceptual frameworks</u> and <u>critical thinking (Outcome 3)</u> .
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. Analyse diverse marketing situations and identify marketing opportunities and threats (BBA Outcome 2); b. Apply marketing theories and models to practical marketing situations (BBA Outcome 3); c. Evaluate ethical issues from a marketing perspective and suggest appropriate actions (BBA Outcome 4); d. Analyse and/or suggest ways to create value in goods and services and deliver these to customers (BBA Outcome 8); e. Critically select and manage information, develop and present coherent arguments on marketing issues.
Subject Synopsis/ Indicative Syllabus	Overview of MarketingWhat is marketing and why is it important? The marketing processDeveloping Marketing Strategies and a Marketing Plan The marketing plan and strategic planning toolsMarketing and Society Marketing 's impact on individual consumers, society and other businesses Marketing ethics and corporate social responsibilityUNDERSTANDING THE MARKET Analyzing the Marketing Environment The company's macro- and micro- environmentConsumer Behaviour The consumer decision making process Types of buying decision behaviour: cultural, social, personal, psychological

	Business Buying Behaviour Business to business markets Business buyer behaviour Factors affecting the buying Role of the internet in busine	s process: buy			ng situat	ions		
	Marketing Research and In The marketing research proc Marketing information syste	ess	Systems					
	VALUE CREATION Market Segmentation, Targeting and Positioning Benefits of segmentation Segmentation bases The segmentation process The positioning process and repositioning							
	Product and Services Product and Service Classifications Product Decisions Product Lifecycle Branding Characteristics of services and their implications for marketing							
	Price Considerations affecting pricing decisions Major pricing strategies New product pricing: skimming and penetration pricing Price adjustment strategies							
	Distribution Nature and importance of marketing channels Channel design decisions: channel structure, distribution intensity Channel management							
	Promotion The communication process AIDA model Importance of integrated man Designing the promotion min Setting the promotion budge	X	nunicatio	ons				
Teaching/Learning Methodology	The two-hour weekly lecture aims to guide and promote students' understanding of relevant concepts. The weekly one-hour tutorial activities include discussions on case studies, contemporary marketing topics and journal articles. Students will also work in groups to prepare and make presentations, and to critique the work presented by others. Emphasis is placed throughout on the application of theory to the solution of practical and realistic marketing problems in the local and global setting.

	*Weighting of assessment methods/tasks in continuous assessment may be different, subject to each subject lecturer.							
	To pass this subject, students are required to obtain Grade D or above in <u>BOTH</u> the Continuous Assessment and Examination components.							
	 Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: the above methods are designed to ensure that all students - Read the recommended material; 							
	 Discuss the issues brought up in the lectures/seminars; 							
	 Appreciate the different approaches that may be adopted in solving marketing problems and 							
	 Participate in presenting the group's views on a case/marketing situation. 							
	Feedback is given to students immediately following the presentations. All students are also invited to join the discussion.							
Student Study Effort	Class contact:							
Required	Lectures				26Hrs.

Subject Code	MM3111				
Subject Title	Human Resource Management				
Credit Value	3				
Level	3				
Normal Duration	1-semester				
Pre-requisite/ Co- requisite/ Exclusion	Pre-requisite: Management and Organisation (MM2021) or equivalent				
Role and Purposes	This subject contributes to the achievement of the BBA (Hons) Programme Outcomes by enabling students with an understanding of human resource management within organizations and to apply such concepts to analyze and solve problems in business situations (BBA Outcome 9). The role and purpose focus on the key theories and practices of HRM and provides the students with skills in managing human resources effectively (BBA Outcome 3). At the end of the course, students should understand how HRM functions, for examples, recruitment and selection, training and development, performance management, compensation and industry relations, are organized and managed with the relevant embedded ethical issues (BBA Outcome 4).				
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. explain the basic knowledge of HRM functions in organizations (BBA Outcome 9); b. demonstrate an understanding of the skills involved in the management of human resources and appreciate typical everyday problems confronting human resource managers (BBA Outcome 3); c. understand the operational aspects of HRM including recruitment and selection, training and development, payment systems and performance management and industrial relations (BBA Outcome 9); d. to analyse, apply and reflect on HRM functions and relevant activities in relation to ethics in the work place (BBA Outcome 4); e. enhance their critical thinking, theorising and synthesising abilities and apply them to problem-solving in the field of managing people and organizations (BBA Outcome 3). 				
Subject Synopsis/ Indicative Syllabus	 Human Resources Planning The processes of HR planning and how they link to corporate goals and strategies. The contribution of human resource information systems. Recruitment and Selection Compare and contrast alternative approaches and techniques of recruitment, selection and assessment. The importance of ethics and equal opportunities in recruitment and selection. Employee Development and Performance Appraisal

	be implemented. The impa	The significance of reward strategy, its purpose and the range of systems by which it ca be implemented. The impact of social, economic, political and cultural context on HRM compensation and benefits. The importance of ethics in HRM practices.						
	Employee Relations							
	The nature and implications of the rising importance to employee relations, e.g. the role of trade union, how to improve the communication, health and safety.					role		
Teaching/Learning Methodology	The three-hour weekly lecture aims to impart HRM functions and practices. The key to understanding HRM lies within its social, economic, political and cultural context and the lectures will aim to make links between context, activities and theory. Through th lectures, students will learn how to apply, critically review and synthesis the relevan theories and concepts via case studies, group discussions, group presentations, exercise and simulation games. Students will be assessed by means of project presentation, essay writing and examination.				and the vant cises

Normal Duration	-semester			
Pre-requisite/ Co- requisite/ Exclusion	Pre-requisite: Management and Organisation (MM2021) or equivalent			
Role and Purposes	This subject contributes to the achievement of the five (5) of the degree program's BBA (Hons) Outcomes. In so doing, this subject provides students with an understanding of the concepts of strategy, strategizing and strategic management, and enabling them to apply tools, concepts and frameworks to help an organization define / redefine its sustained competitive advantage. This subject will also enable students to develop global outlook, the analysis of the business environments, critical thinking, analytical skills, and ethical awareness, inter alia.			
Subject Learning Outcomes	 Upon completion of the subject, students will be able to: a. demonstrate a global outlook and understand cultural diversity, globalization and their implications for business when dealing with strategic management issues of an organization (BBA Outcome 2); b. identify and respond appropriately to ethical issues as they arise generally and in the business setting pertaining to managerial and organizational decision making and their impact to firm performance (BBA Outcome 4); c. analyze business situations and problems by applying conceptual frameworks drawn from different disciplines when determining the sustained competitive advantage of an organization; 			
	 d. identify and analyze the means by which value is created in goods and services and delivery to users when making strategic recommendations based on rigorous and systematic research of an organization's strategic positioning; e. evaluate the processes and structures through which organizations plan, decide, motivate and control their activities and their impact on strategy implementation ; f. through external analysis, identify and analyze those aspects of the domestic and global business environment that set the 'parameters of choice' within which business organizations set objectives and take actions (BBA Outcome 10).

SECTION 9 – INDUSTRIAL CENTRE TRAINING MODULES

The IC Training modules for the programme are listed below. Note that this list is not exhaustive and other modules may be developed to replace or supplement those listed. Such alterations are on-going and will be made in conjunction with the Departmental Undergraduate Programme Committee's assessment of current needs in conjunction with the Industrial Centre.

TABLE 9 - INDEX

Code	Module	Page
IC2126	ERP Advanced	9-2
IC2129	Computing Tools in Resources Planning & Analysis	9-4
IC3103	Integrated Project	9-6

Subject Code	IC2126
Subject Title	ERP Advanced
Credit Value	1 Training Credit
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject aims at providing students with hands-on practice on the operation of contemporary enterprise resource planning in the whole business environment.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) Acquire a certain level of understanding and practical skill in using ERP software in assisting their future study and professional (<i>Objective 1 and Syllabus Item 1</i>). Category A b) Describe business process common to most businesses (order processing, inventory management, procurement, etc) (<i>Objective 1 and Syllabus Item 1</i>). Category A
Subject Synopsis/ Indicative Syllabus	 <u>Integrate Business Processes</u> Sales order process, master schedule, procurement, invoicing the customer, payment, financial accounting, production management, inventory management
Learning Methodology	Both tutorial and hands-on exercises will be used to deliver various topics. Some of them covered in a problem-based learning approach where enhances intended learning outcomes, and the remaining hands-on practice for real-life applications.

Assessment Methods in Alignment with Intended Learning	Assessment Methods	Weighting (%)		Learning s Assessed

Subject Code	IC2129
Subject Title	Computing Tools in Resources Planning & Analysis
Credit Value	2 Training Credits
Level	2
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject offers wide coverage on the application of software in areas encompass computer-aided statistical analysis and enterprise resource planning that aims at providing the necessary fundamental knowledge and computer skills to students.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) Acquire a certain level of understanding and practical skill in using specific software in assisting their future study and professional (Objective 1 and Syllabus Item 1-5). Category A.
Subject Synopsis/ Indicative Syllabus	 Students are required to take 2 modules: - 1) <u>TM3015 - Basic Computer-aided Statistical Analysis</u> Introduction to SPSS, data collection, questionnaire design, variables and reverse coding, descriptive statistics; non-normality handling, grouping, randomisation and transformation; bivariate statistics, confidence intervals and effect size; factor analysis, reliability analysis with measured and latent variables; simple and multiple linear regression, goodness-of-fit and multicollinearity; One-way and two-way ANOVA, F-ratio and planned comparison; visualising and reporting statistics with histograms, box-plots, line charts, scatter-plots. 2) <u>TM3016 - Fundamentals of Enterprise Resource Planning</u> Overview of ERP system, major components and its functions; operation principle of manufacturing resources planning, BOM, master production schedule, work orders; inventory management and planning, stock movement and re-ordering.

Learning Methodology	Please refer to the individual Module Descriptions of TM3015 and TM3016 for details.		
Assessment Methods in Alignment with Intended Learning Outcomes	Please refer to the individual Module Descriptions of TM3015 and TM3016 for details.

Subject Code	IC3103
Subject Title	Integrated Project
Credit Value	3 Training Credits
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	This subject aims to provide students hands-on engineering-business project experience. In real industrial situations, all projects are related to both engineering and business; such as design feasibility and market opportunity. Engineers are expected having the skills of working in interdisciplinary teams on multidisciplinary projects. In this subject, students have to work in a team with members from other disciplines on an engineering-business project which students may practice and integrate their learned theories and knowledge from academic subjects in their programmes.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a) Describe the benefits from experience in working within an interdisciplinary team on a multidisciplinary project of both engineering and business. (<i>Objective 1 and Syllabus Item 1-4</i>). Category A b) Formulate solutions for different stages of a multidisciplinary project such as project planning, market research, design & packaging, CAD & prototyping, technology investigation, inventory & distribution management, and business proposal & presentation. (<i>Objective 1 and Syllabus Item 1-4</i>). Category A c) Integrate knowledge developed over the course of their field of study to achieve the objectives of the project by producing the deliverables (<i>Objective 1 and Syllabus Item 1-4</i>). Category A d) Manifest their work effectiveness in multidisciplinary and multilateral teams, and demonstrate tolerance and awareness of other viewpoints (<i>Objective 1 and Syllabus Item 1-4</i>). Category B e) Collaboratively execute an application oriented project through group work and discussions and inspires oneself to learn continuously about current industrial technologies (<i>Objective 1 and Syllabus Item 1-4</i>). Category B.

[
Subject Synopsis/ Indicative Syllabus	The extent of the project will depend on the nature of the project that students work on, not all listed activities are likely to be undertaken for all projects.
	1. Project Planning
	Scheduling of Market Research, Design, Prototype, Technology Audit, Inventory and Distribution Management, and Business Proposal. Allocation of resources of Manpower, Machines, and Money.
	2. <u>Market Research</u>
	Start with collecting information in market in the view of the given project theme. Then analyze the potential market, estimate the market opportunity, and identify the market niche,
	3. <u>Design Activity</u>
	Iterative design processes to evaluate & make concept decisions for the theme product and also packaging; document and communicate the concept information to designer, engineers, and marketing people.
	4. <u>Prototype Development</u>
	Build a prototype with the facilities in the centre such as CAD, RP, or CNC; to evaluate, demonstrate, and present the design concepts as well as functionality.
	5. <u>Technology Investigation</u>
	Investigate the existing technologies and equipment in the centre. Evaluate the cost and performance of different manufacturing processes. Study the feasibility of manufacturing of the product.
	6. Inventory & Distribution Management
	Estimate the production volume and the inventory control level, or if necessary as well as the warehouse management. Propose the wholesale and retail distribution channels.
	7. Business Proposal and Presentation
	Present a business proposal with consolidating the findings from Market Research to Distribution Management. Summarize the pricing strategy, cost, resources, volume, time and prediction of the profit.

Learning Methodology	All projects assigned will be of 'real' work basis proposed by supervisors. Typical projects are product for a specific application, material handling systems, testing jig and fixtureetc. These projects are always having a real problem of serious interest to the clients which requires students to meet the expected demand.						
Assessment Methods in Alignment with Intended Learning	Assessment	Weighting			ded Learning omes Assessed

GENERAL UNIVERSITY REQUIREMENTS FOR NORMAL STUDENTS

General University Requirements (GUR)

(a)	Language and Communication Requirements	9 credits
(b)	Freshman Seminar	3 credits
(c)	Leadership and Intra-Personal Development	3 credits
(d)	Service-Learning	3 credits
(e)	Cluster Areas Requirement (CAR)	12 credits
(f)	China Studies Requirement	(3 of the 12 CAR credits)
(g)	Healthy Lifestyle	Non-credit bearing
		Total = 30 credits

(a) Language and Communication Requirements (LCR)

<u>English</u>

All undergraduate students must successfully complete <u>two</u> 3-credit English language subjects as stipulated by the University, according to their English language proficiency level (**Table A**). These subjects are designed to suit students' different levels of English language proficiency at entry, as determined by their HKDSE score or the English Language Centre (ELC) entry assessment (when no HKDSE score is available, e.g. in the case of non-local students).

Students entering the University with specified attainment grades in certain public examinations can be given credit transfer or exemption for one or both LCR English subjects, as listed in **Table C**.

Table A:	English LCR	subjects	(each 3	credits)
----------	-------------	----------	---------	----------

English language competence level/ Subject	Practical English for University Studies (ELC1011)	English for University Studies (ELC1012/1013)	Any LCR Proficient level elective subject in English (Table B)
HKDSE Level 4 and above or equivalent		Subject 1	Subject 2
HKDSE Level 3 or equivalent	Subject 1	Subject 2	

Table B: Proficient level elective subjects for DSE Level 4 students and above (or equivalent)(each 3 credits)

	Advanced English for University Studies (ELC2014)
LCR Proficient level	Advanced English Reading and Writing Skills (ELC2011)
elective subjects	English in Literature and Film (ELC2013)
	Persuasive Communication (ELC2012)

Examination	Result	Subject 1	Subject 2	
HKDSE – English Language	Level 5* and 5**		Exemption	
GCEOL/GCSE/IGCSE – English	Grade A	English for		
HKALE – Use of English	Grade A and B	University Studies		
GCE(AL/ASL) – English Language	Grade A and B		Credit transfer	
	English A (HL): 4 or above English A (SL): 6 or above English B (HL): 5 or above			
IB	English A (HL): 3 or below English A (SL): 5 or below English B (HL): 4 or below English B (SL): any level	Credit transfer	Any LCR proficient level elective subject in English (Table B above)	
IELTS	Score 7.0 or above, with no sub-test score below 6.5			
TOEFL Paper-based	600 or above	University Studies	Exemption	
TOEFL Internet-based	100 or above			

Table C: Credit transfer/ exemption for English LCR subjects

<u>Chinese</u>

All undergraduate students are required to successfully complete <u>one</u> 3-credit Chinese language subject as stipulated by the University, according to their Chinese language proficiency level (**Table D**).

Categories of students	Required subject
For Chinese speaking students	University Chinese (CLC1104C/P) 3 credits
For non-Chinese speakers or students whose Chinese standards are at junior secondary level or below	One subject from Table E below

Subject (3 credits)	Pre-requisite/exclusion
Chinese I (for non- Chinese speaking students) CLC1151	For non-Chinese speaking students at beginners' level
Chinese II (for non- Chinese speaking students) CLC1152	 For non-Chinese speaking students; and Students who have completed Chinese I or equivalent
Chinese III (for non- Chinese speaking students) CLC2151	 For non-Chinese speaking students at higher competence levels; and Students who have completed Chinese II or equivalent
Chinese IV (for Non- Chinese speaking students) CLC2154	 For non-Chinese students at intermediate competence levels; and Students who have completed Chinese III or equivalent
Chinese Literature – Linguistics and Cultural Perspectives (for non- Chinese speaking students) CLC2152	For non-Chinese speaking students at higher competence levels

 Table E:
 Chinese LCR subjects for non-Chinese speakers or students whose Chinese standards are at junior secondary level or below

Students who have obtained verified qualifications or certain results in some public examinations [e.g. HKDSE, HKALE, JEE, GSAT(Taiwan)] should be granted exemption for the Chinese LCR subject. Please refer to the guideline for credit transfer provided by OGUR.

Writing Requirement

In additional to the LCR in English and Chinese explained above, all students must also, among the Cluster Areas Requirement (CAR) subjects they take (see section (e) below), pass <u>one</u> subject that includes the requirement for a substantial piece of writing in English and <u>one</u> subject with the requirement for a substantial piece of writing in Chinese.

Reading Requirement

All students must, among the CAR subjects they take, pass <u>one</u> subject that includes the requirement for the reading of an extensive text in English and <u>one</u> subject with the requirement for the reading of an extensive text in Chinese.

A list of approved CAR subjects for meeting the Writing Requirement (with a "W" designation) and for meeting the Reading Requirement (with an "R" designation) is shown at: https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm

Non-Chinese speakers and those students whose Chinese standards are at junior secondary level or below will by default be exempted from DSR – Chinese and CAR – Chinese Reading and Writing requirements. However, this group of students would still be required to take one Chinese LCR subject to fulfil their Chinese LCR.

Note: In addition to the LCR and Reading and Writing Requirements, students also have to complete 4 credits of discipline-specific language requirements (2 credits in English and 2 credits in Chinese) as specified in the curriculum requirements of their Major.

(b) Freshman Seminar

All students must successfully complete, normally in their first year of study, one 3-credit Freshman Seminar offered by their chosen Broad Discipline. The purpose is to (i) introduce students to their chosen discipline and enthuse them about their Major study, (ii) foster students' creativity, problem-solving ability and global outlook, (iii) give students an exposure to the concepts and an understanding of their discipline-based professional career development with the incorporation of entrepreneurship, and (iv) engage students, in their first year of study, in desirable forms of university learning that are conducive to smooth adjustment to University life, self-regulation, and autonomous learning.

A list of Freshman Seminars offered by the Broad Disciplines can be found at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(c) Leadership and Intra-Personal Development

All students must successfully complete <u>one</u> 3-credit subject in the area of Leadership and Intra-Personal Development, which is designed to enable students to (1) understand and integrate theories, research and concepts on the qualities (particularly intra-personal and interpersonal qualities) of effective leaders in the Chinese context, (2) develop greater self-awareness and a better understanding of oneself, (3) acquire interpersonal skills essential for functioning as an effective leader, (4) develop self-reflection skills in their learning, and (5) recognise the importance of the active pursuit of knowledge on an intra-personal and interpersonal level and its relationship to leadership qualities.

A list of designated subjects for meeting the leadership and intra-personal development requirement is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(d) Service-Learning

All students must successfully complete <u>one</u> 3-credit subject designated to meet the Service-Learning Requirement, in which they are required to (1) participate in substantial community service or civic engagement activities that will benefit the service users or the community at large in a meaningful way, (2) apply the knowledge and skills acquired from their Major or other learning experiences at the University to the community service activities, and (3) reflect on their service learning experience in order to link theory with practice for the development of a stronger sense of ethical, social and national responsibility.

These subjects may take the form of:

- An open-to-all GUR service-learning subject
- A GUR service-learning subject targeted for a particular student group (e.g. a Broad Discipline, or
- A customised DSR subject (core or elective) within the Major/Minor with all the required features and components to meet the Service-Learning Requirement.

Students who have satisfied the Service-Learning Requirement via a customised DSR subject will be required to take another 3-credit subject to make up for the total credit requirement.

A list of designated subjects for meeting the service-learning requirement is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(e) Cluster Areas Requirement (CAR)

To expand students' intellectual capacity beyond their disciplinary domain and to enable them to tackle professional and global issues from a multidisciplinary perspective, students are required to successfully complete at least <u>one</u> 3-credit subject in <u>each</u> of the following four Cluster Areas:

- Human Nature, Relations and Development
- Community, Organisation and Globalisation
- History, Culture and World Views
- Science, Technology and Environment

A list of CAR subjects under each of the four Cluster Areas is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(f) China Studies Requirement

Of the 12 credits of CAR described in (e) above, students are required to successfully complete a minimum of 3 credits on CAR subjects designated as "China-related". The purpose is to enable students to gain an increased understanding of China (e.g. its history, culture and society, as well as emerging issues or challenges).

A list of approved CAR subjects for meeting the China Studies Requirement is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(g) Healthy Lifestyle

Healthy lifestyle is the platform for all-round development. Students are required to successfully complete a non-credit-bearing programme in healthy lifestyle.

For the 2012/13 to 2014/15 intake cohorts, the programme covers: (i) fitness evaluation, (ii) concepts on health and fitness, (iii) sports skills acquisition, and (iv) exercise practicum. More details can be found at: <u>http://www.polyu.edu.hk/ogur/student/4yr/gur/hls/1214</u>

With effect from the 2015/16 intake cohort, students will be required to complete the following components: (i) sports training/participation, (ii) e-learning modules, and (iii) lectures/talks. The syllabus covers physical health, mental health, social health, spiritual health, values and priorities on health behaviour with reference to competing priorities in life, reflection on healthy living and plans for self-improvement or maintenance of health behaviour. Details of the programme can be found at:

http://www.polyu.edu.hk/ogur/student/4yr/gur/hls/revised

Students on Articulation Degree Programmes and Senior Year Intakes to the 4-year Ug degree programmes are not required to take Healthy Lifestyle Programme. Advanced Standing students are required to take HLS (except for those who are HD/AD holders who follow the Senior Year/Articulation Degree programme GUR curriculum).

GENERAL UNIVERSITY REQUIREMENTS FOR SENIOR YEAR STUDENTS

General University Requirements (GUR)

(a)	Cluster Areas Requirement (CAR)	6 credits
(b)	China Studies Requirement	(3 of the 6 CAR credits)
(c)	Service-Learning	3 credits
		Total = 9 credits

(a) Language and Communication Requirements (LCR)

Those students not meeting the equivalent standard of the Undergraduate Degree LCR (based on their previous studies in AD/HD programme and their academic performance) will be required to take degree LCR subjects on top of the normal curriculum requirement. The Programme offering department will refer to the guidelines provided by the Language Centres (ELC and CLC) to determine whether a new student has met the equivalent standard. Non-Chinese speakers and those students whose Chinese standards are at junior secondary level or below will by default be exempted from the DSR - Chinese and CAR - Chinese Reading and Writing requirements. However, this group of students would still be required to take one Chinese LCR subject to fulfil their Chinese LCR.

Degree LCR subjects include

TWO English language subjects

- Practical English for University Studies (ELC1011) 3 credits
- English for University Studies (ELC1012/1013) 3 credits
- Advanced English for University Studies (ELC2014) 3 credits

ONE Chinese language subject

• University Chinese (CLC1104C/P) 3 credits

(b) Cluster Areas Requirement (CAR)

Students should not take more than 3 credits (normally 1 subject) from the same cluster area. Students need to fulfill the English and Chinese reading and writing requirements. Students may apply for a waiver if they have fulfilled the English and Chinese reading and writing requirements and/or CSR requirement in their previous studies. The following four Cluster Areas:

- Human Nature, Relations and Development
- Community, Organisation and Globalisation
- History, Culture and World Views
- Science, Technology and Environment

Writing Requirement

In additional to the LCR in English and Chinese explained above, all students must also, among the Cluster Areas Requirement (CAR) subjects they take, pass <u>one</u> subject that includes the requirement for a substantial piece of writing in English and <u>one</u> subject with the requirement for a substantial piece of writing in Chinese.

Reading Requirement

All students must, among the CAR subjects they take, pass <u>one</u> subject that includes the requirement for the reading of an extensive text in English and <u>one</u> subject with the requirement for the reading of an extensive text in Chinese.

A list of CAR subjects under each of the four Cluster Areas is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(c) China Studies Requirement

Of the 6 credits of CAR described in (b) above, students are required to successfully complete a minimum of 3 credits on CAR subjects designated as "China-related". The purpose is to enable students to gain an increased understanding of China (e.g. its history, culture and society, as well as emerging issues or challenges).

A list of approved CAR subjects for meeting the China Studies Requirement is available at: <u>https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm</u>

(d) Service-Learning

All students must successfully complete <u>one</u> 3-credit subject designated to meet the Service-Learning Requirement, in which they are required to (1) participate in substantial community service or civic engagement activities that will benefit the service users or the community at large in a meaningful way, (2) apply the knowledge and skills acquired from their Major or other learning experiences at the University to the community service activities, and (3) reflect on their service learning experience in order to link theory with practice for the development of a stronger sense of ethical, social and national responsibility.

These subjects may take the form of:

- An open-to-all GUR service-learning subject
- A GUR service-learning subject targeted for a particular student group (e.g. a Broad Discipline, or
- A customised DSR subject (core or elective) within the Major/Minor with all the required features and components to meet the Service-Learning Requirement.

Students who have satisfied the Service-Learning Requirement via a customised DSR subject will be required to take another 3-credit subject to make up for the total credit requirement.

A list of designated subjects for meeting the service-learning requirement is available at: https://www2.polyu.edu.hk/as/Polyu/GUR/index.htm
