

Subject Code	MM5433
Subject Title	Decision Analytics by Machine Learning
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	<ol style="list-style-type: none"> 1. Introduce basic programming concepts in R-language. 2. Introduce students to machine learning in decision-making context. 3. Justify the use of machine learning in the workplace. 4. Demonstrate pitfalls of machine learning.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. Able to read/write/evaluate code written in R-language b. Demonstrate practical skills on simple predictive analytics c. Scrutinize insights based on predictive analytics d. Use machine learning as a routine tool for effective decisions
Subject Synopsis/ Indicative Syllabus	<p>This subject offers students a journey from basic data analytics to advanced machine learning concepts, using R and XGBoost. Each week, through a representative business example study, we uncover how data shape effective management and decision making. The subject gradually builds on R-programming and machine learning knowledge, giving students hands-on experience with R-assignments linked to the weekly topics. Basic understanding of statistics is required.</p> <p>Part I: Beginning programming in R</p> <ul style="list-style-type: none"> - Art of writing programs - Algorithms vs code - R-syntax <p>-----</p> <p>Part II: Fundamentals of data analytics</p> <ul style="list-style-type: none"> - Importance of data - Big data - The process of data collection - The process of data cleaning <p>-----</p> <p>Part III: Human behavior</p> <ul style="list-style-type: none"> - Non-linear relationships - Missing responses - Biases - Choices and value estimates <p>-----</p> <p>Part IV: Machine learning hiccups</p> <ul style="list-style-type: none"> - overfitting and underfitting - Model explanations - Text analysis

Teaching/Learning Methodology	<p>39 hours of class activities including lectures on the main concepts and models, together with applicational case studies, tutorials, class/group problem discussions, and presenting pre-class analysis of their work. Weekly representative simple case-based problems connect programming exercises to workplace problems.</p> <p>Weekly R programming assignments slowly build up expertise in predictive analytics. Students should be able to work on the assignments on their regular laptop from home.</p>																																								
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="4">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th></tr><tr><td>Continuous Assessment*</td><td>100%</td><td></td><td></td><td></td><td></td></tr><tr><td>1. Final decision making writeup</td><td>30%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td></tr><tr><td>Total</td><td>100 %</td><td colspan="4"></td></tr></table> <p><i>*Weighting of assessment methods/tasks in continuous assessment maybe different, subject to each subject lecturer.</i></p> <p>To pass this subject, students are required to obtain Grade D or above in the overall subject grade.</p> <p>Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p>Class Participation: Students are required to attend class and engage in discussions surrounding organizational issues and debate on applicational case studies.</p> <p>Weekly Assignment: After-class assessment of the continuous understanding of the concepts, issues, models and applications of machine learning techniques by providing answers to given questions.</p> <p>Final decision making write-up: The writeup is a potential solution to the organizational problem using machine learning. The reader is expected to be a senior executive of the firm and hence, should be presented in a simple form with charts for those executives to understand and critique.</p>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)				a	b	c	d	Continuous Assessment*	100%					1. Student Study Effort Expected	Class contact:	
	▪ Seminars	39 Hrs.
	Other student study effort:	
	▪ Preparation for lectures	39 Hrs.
	▪ Preparation for individual assignment / group project / class quiz	44 Hrs.
	Total student study effort	122 Hrs.
