

## Outstanding Student, Faculty of Applied Science and Textiles 2021

**GOPINATH Gautham**

BSc (Hons) in Engineering Physics &  
Minor in Computing

At PolyU, I have been constantly thinking about how to 'compose' my story of university experience and how to make it rewarding. In my first year, I attended a summer programme at the University of Cambridge on a scholarship, where I had the opportunity to see the original publications of ground-breaking scientists like Newton. In my second year, I did an exchange semester at the University of Waterloo in Canada, where I studied really interesting subjects and made lots of good friends. Currently, I am in my final year and am doing a theoretical physics research, which will help pave way for my PhD study. I am glad to say that my story at PolyU has a happy beginning and a wonderful ending.

I am really grateful to PolyU for the learning opportunities, the scholarships and the academic counselling, which have helped make my story very memorable. With the Outstanding Student Award of my Faculty, I know all the hard work and efforts I put in during my undergraduate study have finally been paid off. I will certainly take it as an encouragement and will work even harder for my postgraduate studies.
