

## **Outstanding Student, Faculty of Engineering 2018**

**Mr. ZHANG Chaoran**

*BEng (Hons) in Electronic & Information Engineering &  
Minor in Applied Mathematics*

I am Dalton ZHANG Chaoran, a year four student majoring in Electronic and Information Engineering with a minor in Applied Mathematics. It is a great honor to be selected as the Outstanding Student of Faculty of Engineering. I want to express my heartfelt gratitude to PolyU for providing me many great opportunities to learn and thus become an all-round person.

### **Developing my career path**

During my study in PolyU, I not only handled my academic studies with due diligence, but also, with the solid foundation in mathematics, electronics, and programming, I came to realize my passion in the computer vision field. I had actively participated in lab works and competitions. These competition experiences exposed me to the start-of-the-art solutions in this field and reinforced both my programming and research skills.

### **Industry Internships**

Internship experiences served a great part of my University life. I have completed several full-time internships, covering fields including Internet, Networks, Automation and Banking. Both my soft and hard skills, including research, programming, communication and networking, are greatly improved through these abundant internship experiences.

### **Services to local community**

Through the service-learning subject, I realized that no matter how little one can do, as long as people have the heart to serve, together we can help the people in need. I thus participated in various community services including services to the stray dogs, elderly and LGBT groups. The overall experience deepened my passion to serve the needy and also be more aware of the things that are needed to be changed in our community.

### **International Engagement**

I was offered many opportunities to study overseas during the past four years. I not only conducted field-trip to Xi'an and Milan, but also went for academic exchange or visit to Montreal and Sydney. These experiences offered me a deeper understanding of the society and give me the chance to expand my network.
