From 1 September 2021

Reaccredited for a further five years from 30 May 2021 by PolyU

About the course

A strong foundation in infectious diseases is essential in order to become a competent infection control professional. We have revised and expanded our programme to bring you three sub-modules that not only include a detailed review of the latest infection control practices, but also an understanding of emerging and re-emerging infectious diseases, outbreaks of infection, tropical diseases, and the global crisis of antimicrobial resistance.

Sub-module 1: Contemporary Infectious Diseases will cover the aetiology, transmission mechanisms and pathogenesis of common infectious diseases in healthcare settings and the community.

Sub-module 2: Infection Control Concepts & Practice will enhance participants' awareness of infection control concepts and current guidelines on infection prevention and control.

Sub-module 3: Special Issues on Infectious Diseases and Infection Control will address topics such as weapons of mass destruction; simulation training for infectious disease nursing; mathematical modelling for infection control; and research in infection control and infectious disease prevention.

DON'T MISS this opportunity to learn from over 40 experts in the field of infectious diseases and infection control!!!

Target Audience:

This course is applicable to ALL healthcare workers from all healthcare settings such as hospitals and long-term care facilities as well as allied health professionals and other interested/ relevant personnel
