

Guidelines for Assessing Course Equivalence Webinar (Local Session)

Jeff Au Yeung

College Senior Lecturer,

Programming Coordinator, Associate of Engineering

Programming Coordinator, Higher Diploma in Data Science

Division of Engineering and Technology

HKUSPACE Community College

Information about our programme

Associate of Engineering

- 2-year sub-degree programme
- Around 400 students (including 20-30 mainland students)
- Program structure
 - (1) Common Engineering year 1
 - (2) 3 majors in year 2 (Computer Science, Electronic Engineering and Computer Engineering)
- More than 90% graduates choose to articulate to the degree programme (local UGC funded, local self-funded and oversea).
- Most mainland students choose to study oversea.

Challenge on the credit transfer

- During the past five years, our graduate articulated to more than 50 different programmes (just count the local one !)
- The credit transfer arrangement and requirements from different Universities (even different programmes in the same University) can have large variation.
- It is difficult to for us to make adjustment on our course to fulfill all the requirement from different parties.
- Every time when we have modification on the programme structure (e.g. change course title, syllabus), we have to inform all the parties, otherwise, students will have problem on their coming credit transfer exercises.
- All these will be even more serious for the oversea degree programme as we don't have very good connection with all of them.
