PolyU develops novel scaffold for bone regeneration**

Researchers from The Hong Kong Polytechnic University (PolyU) have designed and fabricated a high performing bone scaffold with shape memory and self-fitting characteristics for minimally invasive implant. A rabbit femoral defect study proved that it can be safely and conveniently implanted into bone defects and induce bone regeneration effectively, thus enhancing the recovery of bone fractures and injuries (such as bone tumor resections).

A press conference will be held to introduce the innovation. You and your representatives are cordially invited to cover the press event. Details are as follows:

Date : 14 August 2018 (Tuesday)

Time : 10:30 am

Venue : V1201, 12/F, Jockey Club Innovation Tower (Block V), PolyU Campus

Speakers :

- Professor HU Jian-lin, Professor, Institute of Textiles and Clothing, PolyU
- Dr GUO Xia, Associate Professor, Department of Rehabilitation Sciences, PolyU
- Dr XIE Ruiqi, PhD graduate, Institute of Textiles and Clothing, PolyU

Language : Putonghua (supplemented with English)

For enquiries, please feel free to contact Ms Christina Wu at 3400 2130 / 9162 8048. Thank you.

Yours sincerely,

Denise Wong
