

# Your **BIG** or **small** Donation will make an *Impact!*

The Department of Rehabilitation Sciences (RS) has been providing high-quality internationally benchmarked entry-level education to occupational therapists and physiotherapists for 30 years. Our graduates are competent professionals serving clients in Hong Kong, Mainland China, and many other countries. We also offer excellent opportunities to practitioners and researchers for pursuing further education from a disciplinary-specific or multidisciplinary perspective in rehabilitation sciences. In order to achieve its mission of providing high-quality education and mediating professional development, our Department still has a lot to do in the future. Your support is vital to facilitate this process!

Please offer your support by making a donation. Your donation, no matter whether big or small, will make an impact on the future of rehabilitation in Hong Kong and throughout the world.

## Cover Story

# Physiotherapy *legends* at The East Asian Games

Professor Gabriel Ng (Chair Professor and Associate Head)

"Be the legend", the motto of the Hong Kong East Asian Games (EAG) 2009, has been the spirit of the games. The Hong Kong team finished the EAG with flying colours and our athletes have written a new page in history, winning a total of 110 medals, 26 of which were gold. But as well as this tribute to our athletes, we should also note the hard work done behind the scenes by the various supporting teams, including a group of sports physiotherapists and physiotherapy students from the Hong Kong Polytechnic University (PolyU).

In response to the request from the Home Affairs Bureau to our Faculty requesting on-field physiotherapy support to the badminton, tennis, hockey, volleyball and rugby sevens teams at the EAG, we formed a support team for these events. Thanks to backup from the Hong Kong Physiotherapy Association, who provided personnel, and financial support from our Faculty as well as from the Hong Kong Jockey Club Sports Medicine and the Health Sciences Research Centre, we recruited 44 experienced sports

The physiotherapists and students who volunteered for EAG

Our physiotherapist treating an athlete in the tennis event. Behind can be seen a physiotherapist and athlete from the Chinese Taipei Team

physiotherapists and 120 undergraduate physiotherapy students for the Games. Thanks must go to Quentin Yau, Elton Ng, Chris Chan, Eric Chow and Billy Cheung for liaising with the physiotherapists, and Shirley Fong for supporting the student helpers. Their effective coordination, efficiency in responding to contingencies and thoroughness in following up the matches throughout the entire EAG was a key factor in our success in providing the on-field physiotherapy service. Even though not all the athletes used our services throughout the EAG, our presence was certainly visible and appreciated. The rapport we built with the teams and our demonstration of professionalism will be pivotal in securing our role in the sports arena.

The EAG have come to a successful conclusion, and we are proud to have been a part of the legend. The flame of the Games might have departed, but its light and heat is still felt in many of our hearts. May both persist in our society, and may the legacy of the EAG be the beginning of another legend for HK in the years to come.

## RS's legend continues in the 16<sup>th</sup> Asian Games with the HK JUDOISTS

Miss Phoebe Cheuk (Clinical Associate)

Building on their successful collaboration in the EAG, the Faculty of Health and Social Sciences (FHSS) of the PolyU has extended its association with the Judo Association of Hong Kong, China (JAHKC) as announced on 13 January 2010.

Judo has been identified by the Sports Commission as an up-and-coming sport. The Department of Rehabilitation Sciences (RS) in FHSS sent a team of professional experts including Dr Amy Fu, Assistant Professor, and Miss Phoebe Cheuk, Clinical Associate and Sports Physiotherapist, to help the HK Judoists to clinch one gold and one bronze medal in the EAG. As invited by the JAHKC, our Department will continue to provide professional consultation and advice to identify elite athletes as well as assist them to prepare for the 16th Asian Games to be held in Guangzhou in November 2010.

In the coming months, a team of physiotherapy professionals from our Department will continue to conduct a series of scientific and sport-specific assessments of athletes. This will focus on a Judo-specific comprehensive musculoskeletal assessment, including but not limited to the evaluation of shoulder IR and ER strength and tests of flexibility, lower limb power and core stability. These are based on the clinical evidence that Judo requires its

Our team of professional experts (left to right): Mr Chris Chan, Sports Physiotherapist, Miss Phoebe Cheuk, Clinical Associate and Sports Physiotherapist, Mr Yu Kin Ting, EAG gold medallist in the Men's < 55kg and Dr Amy Fu, Assistant Professor

practitioners to have speedy reactions, explosive power and muscular endurance over a five-minute, highly intensive competitive encounter.

The aim of this musculoskeletal screening is to identify physical deficiencies and formulate an individualized injury prevention and performance enhancement programme for each of the elite HK Judo athletes. Each will be closely monitored. Injury prevention, acute injury management and rehabilitation will also be implemented as needed during the preparation phase. From the start of the screening to the end of the preparation phase, all steps taken are important in assisting the athletes to maximize their potential to achieve the best possible performance at the Asian Games. This is a comprehensive programme tailor-made for the competitors in Judo, and we hope to help our HK Judoists to continue the legend in the forthcoming Asian Games.

Press conference on the collaboration between the FHSS and the Hong Kong Judo Association

## Staff Activities

# The Hong Kong Occupational Therapy Symposium 2010

## A local symposium... A great event

Dr Kenneth Fong (Assistant Professor and Chairman of the Scientific Committee Hong Kong Occupational Therapy Symposium 2010)

This symposium was the most worthwhile and successful event for the occupational therapy (OT) profession in the year 2010, or indeed ever - particularly as it broke the record for the number of participants over the past decade. Held on 30th January 2010 in the Hong Kong Polytechnic University (PolyU), the event was organized by the Hong Kong Occupational Therapy Association (HKOTA) in partnership with the Department of Rehabilitation Sciences of PolyU.

Health care in Hong Kong (HK) has undergone a steady shift and now focuses principally on the promotion of health and healthy lifestyles, and the prevention of disabilities. Primary health care has rapidly gained public attention ever since the government put it on the agenda in the health care reforms of two years ago. Since then, occupational therapists have increasingly been asked to move beyond their traditional hospital-based roles and work in community or primary care settings. Responding to this trend, the theme of this symposium was "New Frontiers of Occupational Therapy in Primary Health Care and Community Rehabilitation". As a profession which focuses on the wellbeing of people with disabilities, the Hong Kong Occupational Therapy Symposium 2010 allowed our colleagues to present their work of the past two years and demonstrate their success and efforts as health agents.

Fifty-eight abstracts, in the physical, psychosocial and paediatric fields, were submitted to the conference and 43 were accepted for oral presentation. Of the record-breaking 300 delegates, 36 were from the Philippines (University of the Philippines, University of Santo Tomas and the Cebu Doctors' University), 5 from Japan (the Training Centre for Disabled Children of Urayasu and the Saitama Prefectural University), and a few from each of the mainland, Macau and Singapore. A further 60 OT students were recruited as helpers. Moreover, we were glad to have Professors of OT, Gary Kielhofner and Renee Taylor, both of the University of Illinois at Chicago (UIC) as our invited guests to set out their vision for developing primary health

care, particularly in terms of psychosocial practice. Both speakers are known for their work in developing the knowledge base in IT. Professor Kielhofner is particularly well-known to OTs worldwide, having developed the Model of Human Occupation (MOHO), one of the most important theoretical frameworks in OT, in the 1980s and early 1990s. The anniversary dinner of the HKOTA was also held

Members of the organising committee, honourable guests, keynote speakers and moderators of concurrent sessions. Middle: Professor Gary Kielhofner and Professor Renee Taylor

immediately after the symposium with over 90 guests, including the Honourable Dr York Chow, Secretary for Food and Health of the Government of the HK Special Administrative Region (HKSAR).

The symposium also incorporated a discussion forum in which several well-known occupational therapists, who are also stakeholders in the government and NGOs, were invited to share their views on the direction and development of OT in different primary care sectors. For now, with increasing attention on how we can reduce the incidence of disease and injury in the general public by means of health promotion and protection, OTs may be looking to a new role in health promotion programmes, especially educational programmes for seniors and community activities for people with chronic disease.

The topic of client-centred practice has become increasingly important in OT. Nevertheless, in our

Professor Chetwyn Chan (RS head of department - co-organizer of the event) and Ms Rebecca Chan (representative of the organizer)

professional lives it is often difficult to articulate what this means. Client-centred practice can be achieved across all OT sectors despite the different characteristics, outlooks, impairments and life circumstances experienced by clients. Over 56 participants registered for the pre-symposium workshop, "Achieving True Client-Centred Practice", conducted by Professors Kielhofner and Taylor. This workshop made use of multiple case studies covering various therapy circumstances, to illustrate how to achieve client-centred practice at all times. Furthermore, 25 participants attended the 2 half-day post-symposium workshops on the evidence-based practice of health Qigong, and OT in health promotion: strategies and practice, both of which were lectured by local experts.

## 2010 Departmental Retreat

### Enhancing our Leading Edges

Dr Margaret Mak (Associate Professor) and Dr Jenny Chung (Associate Professor)

At the beginning of 2010, our Department held a retreat at the Clearwater Bay Golf and Country Club, with the theme "Enhancing our Leading Edges". Not only was this held in a place with breathtaking views, overlooking the Clearwater Bay, but it also started with a list of breathtaking questions: "How many staff's English first name starts with 'S'? Name 4 of them"; "How many PT and OT are there in the Rehab Clinic? Name all of them"; "Name the staff member who is going to receive the Long Service Award this year". Laughter as well as thoughtful looks filled the room as we sought the answers from each other.

After this warm-up brainstorming activity, every one of us was ready for the more serious business including discussions related to the departmental review, postgraduate education and research development. There was a lot of insightful sharing and discussion of these topics.

On the afternoon of the first day, Associate Vice President, Professor Judy Tsui, shared with us the University's strategic direction on Internationalization and brought us good news about the number of international students we could enrol

Group discussion of various topics

in the coming academic year. Mrs Winnie Eley, Director of the International Affairs Office, enlightened us on the scope of the support the University offers to realize the goal of Internationalization. Winnie also joined in our subsequent discussions and further clarified the support available from the University.

As well as these serious discussions, we also held a teambuilding activity to strengthen our team spirit.

"Looker", "Runner" and "Builder" - each one of us played one of these roles in a creative teambuilding activity. The rebuilding of a model that resembled the original depended on the 3Cs - communication, cooperation and comprehension. Yet, the secrets of success seemed to be associated with the presence of heavy-weight (that is, influential) people in the team.

One of the highlights of the retreat was the conception of the "Dragon" programme plan, which vividly summed up the discussions regarding the integration and progression of the different levels of academic program.

The retreat ended with a delicious seafood dinner in a cosy local restaurant.

Group Photo

## Occupational Therapy Mini-Retreat 2009-2010

Ms Daphne Ip (Clinical Associate)

On December 17th 2009, we had our annual Occupational Therapy (OT) mini-retreat at the CEO club on our PolyU campus. OT faculty members shared their thoughts and ideas about collaboration with universities in mainland China and the development of our existing OT postgraduate programmes in the future.

One of the highlights of the discussion was the new strategies and initiatives on modes of teaching such as blended learning, block teaching on weekends, an interactive learning platform and a teleconferencing clinical teaching module. A postgraduate programme in Mental Health was proposed with a broader

scope covering crisis intervention in the family and alternative medicine using traditional Chinese techniques, hypnosis and Qi-gong.

In addition, many of our dedicated faculty members shared their personal experiences and visions in collaboration with mainland partners such as the China Rehabilitation Research Centre in Beijing, the Fujian University of TCM, the Kunming Medical University, the Sichuan University, the Sun Yat-Sen University and lastly, but not least, the Deyang Project in conjunction with the HK Red Cross.

## CARE FOR OUR COMMUNITY

### Fall Prevention Programme for Older People with Diabetes

Dr Gladys Cheing (Associate Professor)

It has been estimated that 10% of the general HK population suffers from diabetes, with a prevalence of over 20% in people aged 65 or above. Our earlier research has found that the muscle strength and tactile sensation of the foot region in people with diabetes are significantly reduced when compared to age-matched control subjects. We also found that the soft tissue of the foot-ankle complex had thickened, and the plantar soft tissue was significantly stiffened, in people with diabetes. Due to sensory and motor deficits, plus altered biomechanics in the foot-ankle region, this group of clients is prone to poor postural control and thus has an increased risk of falling.

A community based project entitled "Evidence-Based Community Fall Prevention Programme for Older People with Diabetes" will shortly be launched with the

support of the Food and Health Bureau of the HKSAR Government. This project aims to set up a specific exercise programme targeting fall prevention for people with diabetes in HK. Participants will be recruited from the community. They will receive balance training, attend educational talks and benefit from a home assessment conducted by a registered physiotherapist.

On completion of this exercise programme, participants are expected to have improved muscle strength, flexibility and coordination, all of which can subsequently improve their balance control. In particular, our health education and exercise training focus on fall prevention. We hope this programme can encourage participants to build up a daily exercise habit and promote a healthy lifestyle in order to prevent further complications.

Student's Activities

# Clinical Placement in CANADA for Physiotherapy Students

*Josiben Chung and Victoria Tang (Year Three Physiotherapy students)*

We are glad that we were granted this valuable opportunity to have our placement in Canada for six weeks. It was an enjoyable and unforgettable experience for both of us. We worked in two different settings: the Physiotherapy Outpatient Services of the St. Mary's of the Lake Hospital and the Physical Therapy Clinic of the Queen's University.

As it is the practice in Canadian physiotherapy programmes that each clinical educator will have only one student per placement, we had the

*Having fun in Canada - Victoria (left) and Jo (right)*

opportunity to learn individually and according to our own pace. Under the guidance of our highly experienced clinical educators, Mr Kris Riseling and Mr Michael Ranger, our skills - especially in assessment and clinical reasoning - were sharpened. In addition, we had the chance to put our knowledge into practice, using techniques which benefited our patients. Our clinical educators and the staff of the hospital and clinic were friendly and made our learning process an enjoyable one.

During the weekends, we were able to explore the beautiful country in Ontario and also visited a few towns. The English-style architecture, the spectacular landscape of the farms, the unforgettable silhouette of maple trees against the sunset and, of course, the wonderful learning experience will always be in our memories.

## Joint PolyU OT / Harvard University Project 2009 Changsha & Hengyang, China

*Tiffany Tse (Year Three Occupational Therapy student)*

This August, four OT students and one recent graduate had a hot and lovely summer in Hunan, serving the children who live in the orphanages run by International China Concern (ICC). We worked alongside two interns from Harvard China Care who are also students at Harvard University. We spent our first week in Changsha, and stayed with the children in a centre called the Light House. In the Light House, there was a little workshop where the older children made souvenirs as gift to their friends in ICC or for fundraising purposes. We spent most of the time playing games, dancing and doing artwork with the younger children. They enjoyed going to the park near the Light House to run around and explore the surroundings. They were all very excited! On our last day, we cooked a meal and ate it in the house of one of the teenagers who used to live in the Light House.

After this, we spent our remaining time at the centre in Hengyang where the children are relatively more disabled. As well as doing assessment and training with them, using the knowledge we had learnt so far, we all helped with the regular conductive education class run by the centre for children with cerebral palsy. More importantly, we had lots of fun with the lovely children there; we swam, sang, played, drew and had birthday parties with them.

*International China Concern Centre in HengYang (Back row, from left) Michelle, Aline, Anna (OT from ICC), Tiffany, Jessica & Ethan (Front, from left) Sheng & Chris (Harvard University)*

Their big smiles lightened up our days there!

We had a good time not just with the children, but also among ourselves. We explored the area and went sightseeing, playing, eating, singing karaoke and mountain climbing together during the weekends. We talked about our lifestyles and values in HK and the US. The whole trip was an awesome and amazing experience.
